MESSAGE

Education is at the heart of an equitable and inclusive society. The need for an objective assessment of quality education in schools can hardly be over emphasized. PARAKH Rashtriya Sarvekshan 2024 is a significant step in this direction. Unlike the earlier traditional assessments, this survey offers a more detailed picture of what students are learning and how teaching in school systems are supporting the learning process across the country.

The survey provides meaningful insights into classroom practices, teacher's professionalism, and the curriculum implementation by focusing on students' competencies in core subjects and essential skills. With data collected from over 21 lakh students in 74,229 schools, it gives us an opportunity to identify learning gaps, spot regional trends, and highlight practices that are working well.

This initiative aligns with the goals of the National Education Policy (NEP) 2020, which encourages schools to promote creativity, critical thinking, and a more student-centred approach to education. PARAKH Rashtriya Sarvekshan 2024 is a step in that direction-helping us assess and improve what we do in our classrooms every day.

All the teachers, students, school leaders, and officials involved in this exercise deserved to be commended. Their participation and commitment to quality education are truly praiseworthy. I hope this survey findings are used widely and thoughtfully to help build a more equitable, effective, and responsive education system.

(Dharmendra Pradhan)

School education lies at the heart of a nation's progress—it is where foundational values, skills, and aspirations are shaped. The PARAKH Rashtriya Sarvekshan 2024 represents a major step forward in our national journey to strengthen school education through a more informed, inclusive, and responsive approach.

This pioneering initiative goes beyond conventional assessments. It seeks to understand not just what students know, but how schools, teachers, and the broader education system are enabling meaningful learning. By doing so, it reflects a deep commitment to equity, quality, and continuous improvement across all layers of our school education landscape.

What sets PARAKH apart is its ability to empower every stakeholder—from classroom teachers who refine their methods based on feedback, to policymakers who draw on robust data to guide reforms, to community members who advocate for better learning environments. The emphasis on real-world competencies and systemic understanding ensures that assessments are not endpoints, but starting points for responsive and relevant educational action.

The insights from this nationwide survey provide an opportunity to deepen local engagement, design district-specific action plans, and address context-specific challenges. It invites us to move beyond scores and averages and instead pursue holistic, evidence-based solutions that uplift every learner and every region.

PARAKH Rashtriya Sarvekshan 2024 is more than a survey—it is a shared vision for a stronger, more equitable education system. As we move forward, let this effort serve as a foundation for collaboration, innovation, and unwavering commitment to nurturing the potential of every child through high-quality school education.

Ministry of Education
Government of India

MESSAGE

PARAKH Rashtriya Sarvekshan 2024 is a significant step forward in our ongoing efforts to assess and enhance the quality of education in India. This national survey marks a significant milestone in our journey towards educational excellence, reflecting our unwavering commitment to the transformative goals set forth by the National Education Policy (NEP) 2020.

The NEP 2020 envisions an education system that is holistic, flexible, multidisciplinary, and aligned with the needs of the 21st century, aiming to bring out the unique capabilities of each student. Central to this vision is the emphasis on competency-based learning and assessment, ensuring that our students not only acquire knowledge but also develop critical thinking, problem-solving abilities, and a love for lifelong learning. PARAKH Rashtriya Sarvekshan 2024 assessed these competencies across diverse stages of schooling, providing us with invaluable insights into the effectiveness of our educational interventions.

The findings from PARAKH Rashtriya Sarvekshan 2024 help identify both our achievements and the challenges that lie ahead. They provide a clear roadmap for targeted interventions, enabling us to channel our resources and efforts where they are most needed. Moreover, this survey fosters a culture of accountability and continuous improvement, encouraging educators, administrators, and policymakers to collaborate effectively in enhancing the competencies of our students.

Moving beyond the assessment itself, the next phase of this initiative is focused on enabling systemic action. To facilitate this, a comprehensive multi-level strategy has been planned to translate the findings of the PARAKH Rashtriya Sarvekshan 2024 into meaningful actions. This includes a phased dissemination of data through workshops at the national, regional, state, and district levels. These workshops will focus not only on understanding the survey results but also on preparing district-specific roadmaps, where roles and responsibilities are clearly defined. A layered set of interventions—short-, mid-, and long-term—will support this process. These range from teacher training and community engagement to the development of intervention handbooks, digital learning materials, and a Management Information System for continued data use. The integration of survey insights into Annual Work Plans and Budgets (AWPBs) will help embed these efforts into ongoing planning cycles, ensuring that the survey serves as a lever for sustained system strengthening.

Let us celebrate our successes, learn from our shortcomings, and renew our commitment to providing an education that equips our students to navigate and contribute positively to an ever-evolving world.

Shri Anandrao V Patil
Additional Secretary

Department of School
Education & Literacy,
Ministry of Education
Government of India

MESSAGE

Education is not just about imparting knowledge; it is about nurturing minds, shaping perspectives, and equipping students with the skills to navigate an ever-changing world. The PARAKH Rashtriya Sarvekshan 2024 serves as a critical initiative that helps us understand how well we are achieving these objectives. By assessing students' competencies across various educational stages, this survey enables us to measure learning outcomes, evaluate educational policies, and enhance the teaching-learning process in schools across the country.

One of the most significant contributions of this initiative is its role in bridging the gap between assessment and action. The findings from the PARAKH Rashtriya Sarvekshan provide an accurate reflection of student performance, allowing for targeted interventions that cater to the diverse learning needs of children across geographies, socio-economic backgrounds, and linguistic diversities. Furthermore, the survey brings into focus the importance of teacher training, curriculum refinement, and pedagogical innovations in improving learning outcomes.

The National Education Policy 2020 advocates for a shift towards competency-based education, where learning is not just about memorization but about understanding, application, and problem-solving. This survey plays a key role in evaluating this transition, ensuring that students are not only absorbing knowledge but also developing critical skills that will prepare them for future academic and professional challenges.

As we move into the implementation phase, the focus shifts to helping states and districts make effective use of the findings through structured and responsive planning. The post-survey interventions are being designed to support this shift, beginning with detailed workshops that bring together local education officials, academic experts, and practitioners to examine their district-level data in depth. These workshops will inform the creation of action-oriented district plans, tailored to address specific learning needs. Alongside these efforts, practical tools are being developed, such as subject- and stage-specific handbooks, orientation guides for training functionaries, and digital resources, to assist teachers and school leaders in translating insights into instructional practices. The emphasis is on usability, clarity, and adaptability, so that those at the frontlines of education have what they need to respond effectively. These initiatives are not isolated but are being integrated with broader administrative cycles, such as state academic planning and budgeting, to ensure coherence and long-term continuity in interventions.

I would like to express my sincere gratitude to the Secretary (Department of School Education & Literacy), the State Project Directors (SPDs), Directors of SCERTs, and the Principals of State Institutes of Education (SIEs) for their tireless efforts in facilitating the successful execution of this nationwide assessment. Their leadership, commitment, and coordination have been invaluable in ensuring that this initiative reaches schools across the country.

I also extend my gratitude to Central Board of Secondary Education (CBSE) for their valuable support in facilitating the administration of the PARAKH Rashtriya Sarvekshan 2024. Their cooperation in ensuring smooth coordination and execution has contributed to the successful completion of this large-scale assessment.

FOREWORD

Education serves as the foundation for a nation's progress, and ensuring its quality, accessibility, and relevance is a continuous endeavour. PARAKH Rashtriya Sarvekshan 2024 is a significant step in this direction, offering a comprehensive, data-driven insight into student learning outcomes, school environments, and educational effectiveness across India. This initiative reflects our commitment to evidence-based reforms, providing key findings that will guide future educational strategies and help bridge gaps in learning.

In an era of rapid socio-economic and technological transformation, education must equip students with competencies that go beyond rote learning. The focus should be on critical thinking, creativity, problem-solving, and adaptability, ensuring that learners are prepared for a dynamic future. The findings from this survey enable schools, teachers, and policymakers to assess how effectively these competencies are being nurtured at different stages of schooling. By analyzing student performance in language, mathematics, science, and social sciences, alongside teacher training, infrastructure, and pedagogical approaches, the survey provides a holistic overview of the current education landscape.

One of the most valuable aspects of PARAKH Rashtriya Sarvekshan 2024 is its role in facilitating targeted interventions. The data collected does not merely identify learning gaps—it serves as a catalyst for informed decision-making, curricular improvements, and teaching innovations. This approach is essential in ensuring that our education system is inclusive, equitable, and aligned with the principles of competency-based learning as envisioned in NEP 2020.

As we analyze and act upon these findings, our collective goal should be to create an education system that is responsive, forward-thinking, and centered on student development. This requires collaboration among educators, policymakers, and communities to implement meaningful changes that enhance both teaching and learning experiences.

Preface

PARAKH Rashtriya Sarvekshan 2024 is a significant step towards understanding and improving student learning outcomes and overall school effectiveness across India. This nationwide survey serves as a comprehensive reflection of the education system, offering valuable insights into how students at different stages of schooling develop competencies and how various factors contribute to their learning experiences. Designed as a large-scale competency-based assessment, the survey provides a structured analysis of student achievement, teacher preparedness, school infrastructure, and pedagogical practices. Through this initiative, we aim to bridge the gap between policy and classroom realities, ensuring that education remains dynamic, inclusive, and aligned with contemporary learning needs.

At the core of this survey is the principle that education should not only focus on content mastery but also on the development of critical thinking, problem-solving, and application-based skills. By examining student performance in language, mathematics, science, and social sciences, the study highlights both areas of progress and challenges that require targeted interventions. The findings provide a deeper understanding of learning trends across different regions and socio-economic backgrounds, emphasizing the need for a more equitable and responsive education system. The survey also explores how teachers are equipped to facilitate meaningful learning, assessing their engagement with professional development programs, use of technology in teaching, and implementation of innovative classroom strategies. The role of school infrastructure and access to digital learning tools is also examined, underscoring the importance of creating an environment that supports holistic education.

One of the key takeaways from this study is the need to transform data into action. The insights gained from the survey must serve as a foundation for informed decision-making, guiding improvements in curriculum design, teacher training, and resource allocation. The assessment is not merely a measurement of where we stand today but a tool to shape the future of education in the country. Strengthening foundational skills, ensuring inclusive learning opportunities, and fostering an adaptive and innovative approach to teaching will be critical in achieving the objectives envisioned under the National Education Policy (NEP) 2020. The findings also emphasize the importance of integrating technology into

learning processes, addressing regional disparities in student performance, and enhancing social-emotional learning to create a more supportive educational framework.

To ensure that the findings of PARAKH Rashtriya Sarvekshan 2024 lead to meaningful interventions, a multi-level post-survey intervention strategy has been planned. Workshops at the national, regional, state, and district levels will be organized to disseminate results, analyze key insights, and develop targeted action plans. These workshops will bring together education department officials, SCERTs, school leaders, and teachers to collectively interpret the survey results, identify learning gaps, and formulate strategies to strengthen the teaching-learning process. The district-level workshops, in particular, will play a crucial role in enabling local functionaries, including teachers, principals, and community stakeholders, to engage with the findings and develop district-specific interventions. These efforts will help in formulating short-, mid-, and long-term strategies aimed at addressing gaps in student learning and enhancing the overall quality of education.

As we look ahead, PARAKH Rashtriya Sarvekshan 2024 stands as a cornerstone for shaping the future of assessment-driven education in India. The journey toward an inclusive, competency-based, and future-ready education system requires sustained commitment and continuous reflection. Through collaboration and innovation, we can ensure that every learner, regardless of background or location, has access to meaningful learning experiences that empower them for life. It is my hope that this report will serve as a catalyst for positive change, fostering an education system that is both forward-looking and deeply rooted in the principles of equity and excellence.

Prof. Indrani Bhaduri
Programme Co-ordinator
CEO and *Head* PARAKH, NCERT

Executive summary

Introduction

The PARAKH Rashtriya Sarvekshan 2024 represents a critical milestone in India's large-scale educational assessments, spearheaded by National Assessment Centre—PARAKH (Performance Assessment, Review and Analysis of Knowledge for Holistic Development), National Council of Educational Research and Training (NCERT), under the Ministry of Education. This national-level survey builds upon the foundational work of the earlier National Achievement Surveys (NAS) but marks a significant departure by adopting modern methodologies. Furthermore, PARAKH Rashtriya Sarvekshan 2024 is aligned with the India's National Education Policy (NEP) 2020 and National Curriculum Framework (NCF) 2023 and referenced against global assessment frameworks. It thereby sets a new benchmark for assessing student proficiency at the end of Foundation, Preparatory and Middle in Grades 3, 6 and 9 respectively, across all 36 States and Union Territories (UTs) of India and marks a significant advancement over previous NAS cycles. The survey is designed to enable cross-sectional reporting across states, districts, gender, social groups, school location, school-management, and language groups using internationally validated methodologies. It provides valuable insights into the effectiveness of the education system, by identifying system-wide strengths and weaknesses. This information is crucial to design targeted, evidence-based interventions informing education policy and planning.

Scope and Coverage

PARAKH Rashtriya Sarvekshan 2024 is a sample-based survey assessing student proficiencies in Grade 3, 6 and 9 across the country. The survey's multilingual administration makes PARAKH Rashtriya Sarvekshan 2024 the most linguistically inclusive large-scale assessment conducted in India (see Table 1).

Table 1 PARAKH Rashtriya Sarvekshan **2024 Scope**

Metric	Value
Districts Covered	781
Schools Assessed	74,229
Students Surveyed	21,15,022
Languages Used	23

The scope of PARAKH Rashtriya Sarvekshan 2024 covers all categories of school-management such as both central and state government, government-aided, and private institutions, across both rural and urban areas. The assessment captures competencies across genders, representing both male and female students. With its extensive coverage and carefully designed sampling framework, the survey offers a highly representative picture of the current learning levels across India's school education system. Table 2 presents a summary of the coverage of PARAKH Rashtriya Sarvekshan 2024.

Table 2 PARAKH Rashtriya Sarvekshan **2024 Coverage Overview**

Grade	Subjects	No. of Students Participated
3	Language, Mathematics	5,99,026
6	Language, Mathematics, The World Around Us	6,63,195
9	Language, Mathematics, Science, Social Science	8,52,801

Assessment Framework

PARAKH Rashtriya Sarvekshan 2024 was developed using a competency-based framework aligned with key national and global benchmarks, including the National Curriculum Framework for the Foundational Stage (NCF-FS 2022), the National Curriculum Framework for School Education (NCF-SE 2023), and UNESCO's Global Proficiency Framework (GPF).1 The assessment design moves beyond traditional recall-based evaluations, placing greater emphasis on conceptual understanding, problem-solving skills, and real-life application of knowledge. To ensure psychometric rigor and comprehensive content coverage, each student was administered a randomly assigned test form. Multiple test forms were efficiently linked using automated test assembly, which enabled reliable scaling and comparisons of student performance across forms.

Development of Test Forms and Questionnaires

A key component of PARAKH Rashtriya Sarvekshan 2024 was the rigorous development of cognitive test forms and contextual questionnaires. The cognitive assessment instruments were designed to align with national priorities outlined in the National Curriculum Frameworks (NCF-FS 2022 and NCF-SE 2023), as well as global benchmarks such as the GPF.

The test development process commenced with the engagement and systematic training of qualified item developers. This was followed by a rigorous, multi-tiered review protocol designed to uphold content validity, ensure alignment with the national curriculum, and maintain psychometric standards. To empirically establish item quality and functionality, a two-phase pilot study was conducted, providing evidence for the selection and refinement of items for the main survey.

Throughout the assembly of test booklets across all subjects and grade levels, meticulous attention was given to achieving a balanced representation of competencies, cognitive demands, and item difficulty levels within each form. The entire process was marked by methodological rigor, technical accuracy, and alignment with the PARAKH Rashtriya Sarvekshan 2024 assessment framework. These measures collectively ensured that the PARAKH Rashtriya Sarvekshan 2024 assessment would yield valid, reliable, and comparable evidence of student learning across India's diverse educational landscape.

Sampling Design and Methodology

The sampling frame for PARAKH Rashtriya Sarvekshan 2024 was constructed using the UDISE+ 2023–24 database and followed a multi-stage stratified random sampling approach to ensure national representativeness. The sampling strategy involved both explicit and implicit stratification. Explicit stratification was based on state, district and school management types—State Government, Central Government, Government-Aided, and Private schools, while implicit stratification considered school location (rural or urban) and medium of instruction. Schools with fewer than 10 students enrolled in the target Grade

1 https://gaml.uis.unesco.org/wp-content/uploads/sites/2/2019/05/GAML6-REF-16-GLOBAL-PROFICIENCY-FRAMEWORK.pdf

were excluded from the sampling frame; however, this exclusion had minimal impact on coverage, with over 99% of the enrolled student population still represented.

At the student level, in schools where the target Grade had 30 or fewer than 30 students, all students were included in the assessment. For Grades with more than 30 students, systematic sampling was used. In schools with multiple sections per class, one section was selected randomly, and students were sampled from that section. If the number of students in the selected section was insufficient, no additional sections were sampled.

Test forms were distributed using a spiral design method guided by the UDISE+ code of the school. This ensured that all test forms were equally represented across schools and districts, maintaining psychometric balance and minimizing form-related bias.

Contextual Questionnaires

Another essential element of PARAKH Rashtriya Sarvekshan 2024 was the administration of three contextual questionnaires to systematically measure the environments in which learning occurs. Developed with reference to the previous cycle of the National Achievement Survey and international frameworks such as the Programme for International Student Assessment (PISA) and the National Assessment of Educational Progress (NAEP), these instruments were carefully tailored to India's diverse educational contexts to ensure relevance and comparability.

The instruments included:

- **Pupil Questionnaire (PQ):** 47 questions (118 items for Grade 9; 90 items for Grade 3 and 6), administered to over 2.1 million students.
- **Teacher Questionnaire (TQ):** 28 questions (96 items), completed by approximately 270,000 teachers.
- **School Questionnaire (SQ):** 36 questions (121 items), completed by over 74,000 school principals.

The contextual questionnaires provide essential evidence on social, pedagogical, and institutional factors that shape student learning outcomes. The observed associations between these contextual measures and cognitive performance offer critical insights into the drivers of learning outcomes and the barriers faced by different stakeholders, including students, teachers, and school leaders. Further, this evidence can be used to design targeted, equitable, and effective strategies to improve learning nationwide.

- The Pupil Questionnaire measured students' socio-economic background (home infrastructure, parental education, occupation), learning preferences, perceptions of teaching practices, subject-specific attitudes, extracurricular interests, school infrastructure, social-emotional wellbeing, experiences of bullying, and inclusivity for Children with Special Needs (CWSN).
- The Teacher Questionnaire collected information on teachers' professional backgrounds, instructional practices, workload, and preparedness for NEP 2020 reforms, among other aspects. It offers valuable insights into classroom conditions, teaching strategies, and the professional development needs of the teaching workforce.
- The School Questionnaire was designed to capture institutional factors affecting learning. It provides a system-level view of school leadership, infrastructure, resource availability, assessment practices, school environment, inclusivity, and overall readiness to implement education policies and reforms.

A structured psychometric process was applied to develop valid and interpretable factors (see Table 3). Factor analysis (exploratory and confirmatory) and internal consistency (inter-item correlation and Cronbach

alpha) checks were used to identify meaningful factors within each instrument. Associations between these factors and student cognitive scores were examined to check their relevance and utility for informing policy makers, educators, and researchers.

These contextual measures enable policymakers to understand the multiple dimensions that shape learning outcomes across India, identify equity gaps, and design interventions to improve teaching quality, learning environments, and student well-being.

Table 3 Overview of Factors using Background Questionnaires

Pupil Questionnaire	Teacher Questionnaire	School Questionnaire
1. Accommodation & Support for Children with Special Needs	1. Awareness & Implementation of NEP	1. Assessment and Evaluation Strategies
2. Bullying Experiences	2. Classroom Assessment Practices	2. Co-curricular Activities
3. Extracurricular Activities and Interests	3. Job Satisfaction	3. NEP 2020 Readiness
4. Preferred Learning Methods	4. Perceived Student Engagement	4. Perceived Parental Support for Learning
5. Subject-Specific Beliefs and Feelings	5. Professional Development	5. Proactive School Leadership
6. School Infrastructure and Facilities	6. School Infrastructure Challenges	6. School Climate
7. Social-Emotional Wellbeing	7. School-Community Engagement	7. School Policies and Practices
8. Teaching Methods	8. Socio-Emotional Competence	8. School Resources and Infrastructure
9. Socio-Economic Status (SES) Index	9. Student-Centered Teaching Approaches	9. Stakeholder Interactions
	10. Teacher Workload and Stress	10. Student Support Services
	11. Teaching Resources & Tools	11. Teaching Plans & Documentation
		12. Wellbeing Trainings

Data Quality and Validation

Comprehensive data quality assurance measures were implemented to ensure the integrity and reliability of the collected data. The survey achieved high student response rates with minimal instances of missing data, reinforcing the robustness of the dataset. Rigorous consistency checks and thorough data cleaning processes were systematically applied to detect and correct anomalies. Additionally, Differential Item Functioning (DIF) analyses were conducted to verify that test items performed equivalently across key subgroups based on gender, school location, type of school management, and social group. This process confirmed the fairness and comparability of the assessment across diverse sub-populations. Only a very limited number of items that exhibited poor psychometric functioning were excluded from the final analysis database.

Scaling, Proficiency Estimation, and Reporting

Item Response Theory (IRT) scaling was employed to produce proficiency scale scores on a common metric. In addition to the above DIF analyses, the fit of IRT modelling was evaluated in all 23 assessed languages and unique item parameters were estimated if an item showed misfit in a particular language. After the scaling, the alignment of the cognitive tests with the population was evaluated by contrasting item response probability ranges with percentiles of the student proficiency distribution. The alignment was best for Grades 3 and 6, while for Grade 9, except for Language, the cognitive tests tended to be difficult.

Then, combining IRT and latent regression modelling, multiple plausible values (PVs) were generated for each student in order to account for the uncertainty associated with each student proficiency as well as to incorporate the background information from the student questionnaire in the estimation of population or subgroup summary statistics such performance means and standard deviations and association between performance and contextual constructs (e.g., correlation between students' mathematics' PVs and students' wellbeing factor scores).

Students' PVs also provided the data needed to evaluate the overall measurement precision of the instruments. PV-based reliabilities were reported, ranging from .81 to .90 (see Table 4). Although the PV-based reliabilities are lower for Grade 9 for Mathematics, Science, and Social Science compared with Grade 9 language or any of the reliabilities for Grade 3 and 6, they are still larger than .80, which indicates good reliability for reporting group-level results.

Table 4 Average Plausible Values-based Reliability by Subject and Grade Level

Grade	Language	Mathematics	World Around Us	Science	Social Science
3	.90	.88	-	-	-
6	.87	.87	.87	-	-
9	.86	.81	-	.82	.83

To facilitate interpretations of PARAKH Rashtriya Sarvekshan 2024 outcomes, the students' proficiency estimates (PVS) were transformed to the desired criterion-referenced reporting scales for each grade and subject so that the vast majority of student scored within the 100 to 500 range, with 300 corresponding to the proficiency level needed of students responding correctly to half of the test items. Based on the scaled scores, key outcomes are provided at the national level as well as by state, district, gender, school location, school management type, and social group.

The national proficiency summary statistics are reported in Table 5.

Table 1.5 National Proficiency Summary Statistics by Subject and Grade Level

	Grade 3		Grade 6		Grade 9	
Subject	**Mean**	**SD**	**Mean**	**SD**	**Mean**	**SD**
Language	330	83	313	81	285	54
Mathematics	323	70	298	65	266	52
Science	-	-	-	-	258	39
Social Science	-	-	-	-	273	45
The World Around Us	-	-	308	63	-	-

Notable variation across states in the student achievement for all grades and subjects can be observed. For many states the proficiency mean are significantly different from the national means. The state mean proficiencies across subjects range from 289 to 408 (1.4 National SD) for Grade 3 Language and from 286 to 393 (1.5 SD) for Grade 3 Mathematics. For Grade 6, the ranges across the states are 277 to 379 (1.3 SD) for Language, 263 to 347 (1.3 SD) for Mathematics and 280 to 353 (1.2 SD) for The World Around Us. The ranges in state means in Grade 9 are 270 to 337 (1.2 SD) for Language, 244 to 315 (1.4 SD) for Mathematics, 242 to 293 (1.3 SD) for Science, and 258 to 310 (1.2 SD) for Social Science. In some states such as Punjab, Kerala, Himachal Pradesh etc, the mean scores are well above the national mean for all grades and all subjects. In

other states such as Meghalaya, Puducherry, mean scores are below the national mean for all grades and subjects. In Delhi, mean scores are below the national average in Grade 3, but significantly above the national mean in Grade 9.

Variation in mean performance across different categories are also important outcomes to consider. The tables 6 to 9 below show national mean scores for all grades and subjects with respect to background variables like student's gender, social group, school location and school management type.

Gender differences were small and followed patterns commonly observed in international assessments: girls performed slightly higher in Language, while boys performed marginally higher in Mathematics. These differences were consistent across all three Grades and remained modest in magnitude.

Differences across social groups were more pronounced. At the national level, students from the General category tended to have higher mean scores than students from OBC, SC and ST groups, though these patterns varied across states. These differences may also reflect broader social and educational circumstances, suggesting that interventions may need to be sensitive to group-specific needs and conditions.

There are also difference by school location (rural or urban), although these differences change across grades in different Districts. In Grade 3, the average scores are higher for rural students, whereas in Grades 6 and 9 the average scores are higher for urban students across all subjects. For school management, students in State Government and Government Aided schools performed better in grade 3, while the students from Private and Central Government schools achieved higher mean scores in grades 6 and 9. These changing patterns across grades and categories provide useful context for interpreting national results and can help guide how support is prioritised across different school settings. Taken together, these group-level differences offer important background for understanding national achievement patterns and may help inform how policies and programmes are adapted to address the varied contexts in which students learn.

Table 6 Average Achievement by Grade, Subject and Gender

Grade	Subject	Gender	Mean
3	Language	Boys	328
		Girls	334
	Mathematics	Boys	322
		Girls	324
6	Language	Boys	308
		Girls	319
	Mathematics	Boys	299
		Girls	297
	The World Around Us	Boys	307
		Girls	310
9	Language	Boys	282
		Girls	289
	Mathematics	Boys	268
		Girls	264
	Science	Boys	258

		Girls	258
	Social Science	Boys	271
		Girls	275

Table 7 Average Achievement by Grade, Subject and Social Group

Grade	Social Group	Language Mean	Mathematics Mean	The World Around Us Mean	Science Mean	Social Science Mean

	Central Government	322	302		284	298

Performance Standards and Proficiency Levels

Performance Level Descriptors (PLDs) and cut scores were systematically developed through expert panel reviews and standard-setting workshops. The Bookmark Method was used as the standard-setting approach to define proficiency level cut scores. Using this method, students were categorized into four proficiency levels Below Basic, Basic, Proficient, and Advanced.

The classification results showed the following:

- In Grade 3, 61% of students in Language and 54% in Mathematics were classified as Proficient and Advanced.
- In Grade 6, 33% of students in Language, 38% in Mathematics, and 40% in The World Around Us were classified as Proficient and Advanced.
- In Grade 9, 31% of students in Language, 11% in Mathematics, 16% in Science, and 27% in Social Science were at the Proficient and Advanced levels.

The majority of students in Grade 3 grasp the foundational concepts of Language and Mathematics which is the standard for proficiency in that grade. The standards in Grade 6 require students to demonstrate proficiency with a more complex set of skills and a deeper understanding of the curriculum. The smaller percentages of students meeting the standard for proficient indicates that many students are not successfully transitioning to these higher standards. The standards for Grade 9 are rigorous, students must understand an even more complex curriculum which requires a high level of analytic and critical thinking and many students are not reaching these levels of skill and achievement.

As with the scale scores, there is also notable variation across States and Union Territories in the distribution of students by performance level. For example, if Grade 3 the percentage of students classified as proficient and advanced ranged from 36% to 86% for Language and 24% to 83% for Mathematics across states. The ranges were somewhat smaller for Grade 6, 14% to 65% for Language 12% to 66% for Mathematics and 19% to 65% for the World Around Us. The ranges were somewhat narrower for Grade 9, particularly in Mathematics and Science, where very few students nationwide were classified as proficient and advanced. As a result, the percentages for these performance levels were low or relatively low across all states. Across states, the percentage of students classified as proficient ranged from 19% to 68% in Language, 1% to 38% in Mathematics, 4% to 44% in Science, and 10% to 55% in Social Science.

Key Insights from Contextual Analysis

The contextual questionnaires in PARAKH Rashtriya Sarvekshan 2024 captured essential social, pedagogical, and institutional factors influencing student learning. Finalized indices showed sufficient internal consistency and meaningful associations with student cognitive scores, consistent with education theory and international large-scale assessments.

Pupil Questionnaire

- Factors such as Subject-Specific Beliefs, School Infrastructure, Extracurricular Activities, Teaching Methods, Preferred Learning Methods, and Social-Emotional Wellbeing showed positive associations with achievement.
- The SES Index is strongly associated to achievement in Grade 6 and 9, while weaker Grade 3 results point to cautious interpretation but still highlight the role of socio-economic context in addressing learning gaps.

Teacher Questionnaire

- Inter-factor correlations generally reflected coherent, interpretable relationships consistent with education theory, confirming the multidimensional nature of teaching environments.
- Perceived Student Engagement, Classroom Assessment Practices, and Teaching Resources & Tools showed the strongest positive associations with student achievement across subjects and grades.

- School Infrastructure Challenges and Teacher Workload and Stress were negatively associated with core teaching practices and student outcomes.
- Variation across states underscores the need for context-sensitive approaches to teacher support and policy planning.

School Questionnaire

- Inter-factor correlations revealed coherent relationships consistent with education theory, indicating that positive school climates, effective leadership, and stakeholder interactions often reinforce each other.
- School Resources and Infrastructure demonstrated consistent positive associations with student achievement across grades and subjects.
- Student Support Services, Parental Support, and School Climate showed moderate positive associations, especially in higher grades.
- Variation across states highlights the need for context-sensitive policy approaches to strengthen school conditions and learning environments.

Conclusion

The PARAKH Rashtriya Sarvekshan 2024 sets a new benchmark in India's assessment landscape, establishing a comprehensive, reliable, and internationally aligned survey for evaluating student learning. Through its wide coverage across three grades, multiple subjects within each Grade, and 23 languages, combined with the use of advanced psychometric methodologies and rich contextual data, PARAKH Rashtriya Sarvekshan 2024 provides policymakers, educators, and stakeholders with a robust evidence base to guide educational reforms.

A key contribution of PARAKH Rashtriya Sarvekshan 2024 is the establishment of a new national proficiency baseline for the foundational, preparatory, and middle stages of learning. This baseline enables the systematic monitoring of educational equity across critical student subgroups such as gender, area, social groups, and school management types, allowing disparities in learning levels to be clearly identified and effectively addressed.

The survey's findings not only offer insights into student performance but also provide actionable data to support evidence-based planning and the design of targeted interventions that can improve learning outcomes at scale. Furthermore, the assessment framework and reporting scales are closely aligned with international learning standards, making it possible to benchmark India's student achievement in a global context.

By integrating curriculum alignment, multilingual inclusivity, and international best practices, PARAKH Rashtriya Sarvekshan 2024 makes a significant contribution to strengthening India's learning assessment ecosystem and supports the national vision of ensuring quality and equitable education for all students.

Chapter 1: Introduction

PARAKH Rashtriya Sarvekshan 2024 is a national-level large-scale assessment to assess the performance of India's school education system over time. PARAKH Rashtriya Sarvekshan 2024 is managed by the National Assessment Centre, PARAKH (Performance Assessment, Review, and Analysis of Knowledge for Holistic Development), which is established within the National Council of Educational Research and Training (NCERT) under the Ministry of Education (MoE). PARAKH Rashtriya Sarvekshan 2024 aims to provide comprehensive insights into India's educational progress and achievements. Designed to align closely with the objectives of the National Education Policy (NEP) 2020, it introduces key refinements to the previous National Achievement Survey (NAS) framework and establishes a new trendline for educational achievement data, addressing contemporary educational needs and shaping future goals both nationally and globally.

PARAKH Rashtriya Sarvekshan 2024 aims to assess student competencies at the end of the foundational, preparatory, and middle stages across key subjects. This implies that students are assessed in Language and Mathematics in Grade 3; Language, Mathematics, and The World Around Us in Grade 6; and Language, Mathematics, Science, and Social Science in Grade 9, to gain a comprehensive view of their progress through the formal education system.

This document presents the Technical Report of the PARAKH Rashtriya Sarvekshan 2024, which was conducted in December 2024 across the states of India. The assessment was administered in 781 districts nationwide. It encompasses 74,229 unique schools and collects data from 21,15,022 students. Additionally, the assessment was conducted in 23 languages, ensuring inclusivity and linguistic diversity in the evaluation process. Refer to Figure 1.1.

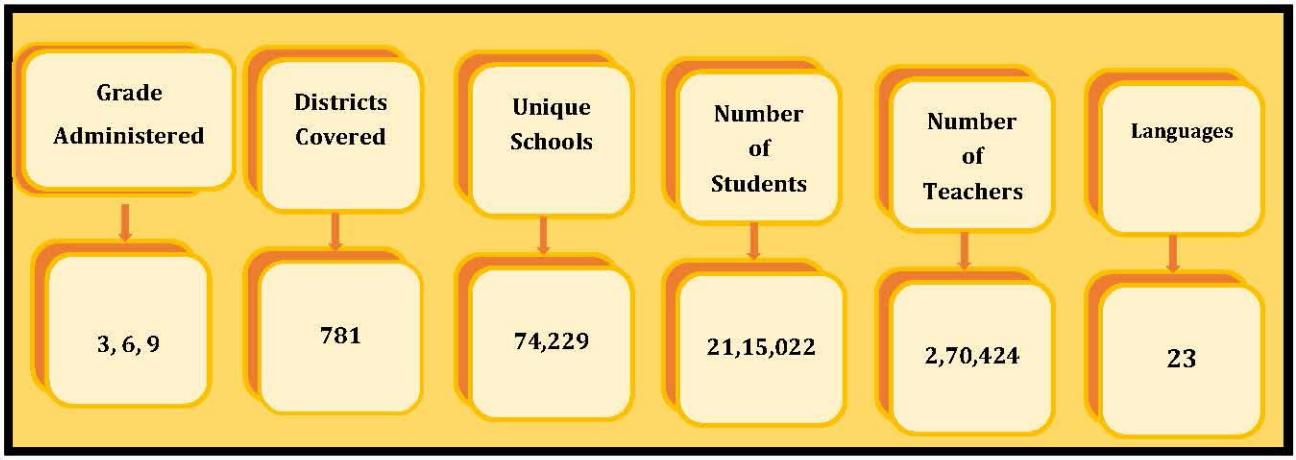

Figure 1.1: Overview of PARAKH Rashtriya Sarvekshan 2024

1.1 Objectives of PARAKH Rashtriya Sarvekshan 2024

The primary objective of PARAKH Rashtriya Sarvekshan 2024 is to evaluate the effectiveness of India's school education system by assessing competencies at various educational stages. This assessment aims to provide valuable insights into current practices and processes, and guides the inputs that need to be provided to improve the health of the education system in the future. It is

guided by and aligned with the goals of the National Education Policy (NEP) 2020 and the National Curriculum Framework (NCF) for the Foundational Stage 2022 and School Education 2023.

Specific objectives of PARAKH Rashtriya Sarvekshan 2024 are:

- **Assess Student Performance:**
  - Develop a new high-quality large-scale survey assessment aligned with the National Curriculum Framework for Foundational Stage 2022 (NCF-FS 2022) and the National Curriculum Framework for School Education 2023 (NCF-SE 2023) to assess students after the completion of foundational, preparatory, and middle stages (in Grade 3, 6, and 9). The assessment will be in line with the objectives of NEP 2020.
- **Compare Performance Across Groups:**
  - Analyze and compare the average performance of students based on:
    - Gender (Girls and Boys)
    - School Location (Rural and Urban)
    - School Management (State Government, Government-Aided, Private Recognized, and Central Government)
    - Social Groups (General, Scheduled Caste, Scheduled Tribes, and Other Backward Classes)
- **Identify Learning Gaps:**
  - Identify key gaps in competencies as prescribed in the NCF-FS 2022 and the NCF -SE 2023.
- **Examine Influencing Factors:**
  - Identify institutional and contextual factors that impact learning outcomes and achievement.
- **Provide Policy Recommendations:**
  - Provide recommendations for policy development, pedagogical interventions, and budgeting to enhance educational quality and ensure equitable learning opportunities, in accordance with the strategic goals set by the NEP 2020 and the two NCF frameworks (NCF-FS 2022 and NCF-SE 2023).

1.2 Key Global Frameworks and Initiatives Shaping School Education and Assessment

To establish a new trendline for future cycles, PARAKH Rashtriya Sarvekshan 2024 aims to support the global agenda for educational development while ensuring the holistic growth of learners across different learning stages. Some of the key features of the survey are as follows:

1. PARAKH Rashtriya Sarvekshan 2024 aligns with the Global Proficiency Framework (GPF) for Reading and Mathematics to measure and report progress on Sustainable Development Goal (SDG) 4, using internationally established frameworks.

2. PARAKH Rashtriya Sarvekshan 2024 data may be used during secondary analyses to calculate the Human Capital Index (HCI) and connect it with the Global Proficiency Framework. One of the aims is to contribute to global efforts to improve education proficiency and report on SDG 4.1.1[2]

3. PARAKH Rashtriya Sarvekshan 2024 strives to establish, to the extent possible, a concordance with the OECD's Programme for International Student Assessment (PISA), acknowledging different assessment modes, populations, and operational constraints.

4. PARAKH Rashtriya Sarvekshan 2024 aligns with the Global Alliance to Monitor Learning (GAML) to establish minimum proficiency benchmarks, fostering internationally comparable measures for educational reporting.

The PARAKH Rashtriya Sarvekshan 2024 Technical Report will provide a comprehensive overview of the assessment process, methodology, and key findings. The introduction will set the context, outlining the purpose and significance of the assessment. Beyond the introduction, the report is broadly divided into four parts. **Part 1** (Design) will cover the Assessment Framework, outlining the guiding principles of the study, followed by the Test Design, which describes the structure and format of the assessment. Additionally, this section will cover Item and Questionnaire Development, describing the process of creating and validating test items and background questionnaires, along with the Sampling Design, which defines the strategy for selecting representative student populations. **Part 2** (Procedures and Methods) will elaborate on sampling and administration procedures, ensuring clarity on data collection protocols. It will also discuss the overall methodology, covering aspects such as sampling, scaling, and the construction of proficiency levels to ensure valid and reliable assessment outcomes. **Part 3** (Results) will present both Technical and Main Results. The technical segment will focus on data quality, sampling, Scaling, Item Calibration, Conditioning, and the process of generating Plausible Values (PVs), as well as the establishment of Proficiency Levels. The main findings are summarized through Scale Scores Summary Statistics and Proficiency Levels Summary Statistics, providing insights into student performance trends. Finally, **Part 4** (Briefs) will include a summary of key findings, a discussion of implications, strategies for further dissemination, and a look at future cycles and trends. The report will conclude with Appendices, offering additional supporting documentation, technical details, and supplementary analyses.

1.3 Introduction of PARAKH Rashtriya Sarvekshan 2024

PARAKH Rashtriya Sarvekshan 2024 is distinct from previous National Achievement Survey (NAS), as it focuses on competencies outlined in National Curriculum Framework for Foundational Stage 2022 (NCF-FS 2022) and the National Curriculum Framework for School Education (NCF-SE) 2023 rather than Learning Outcomes. In alignment with NCF-FS 2022 and NCF-SE 2023, student learning levels are assessed at the end of three defined stages: Foundational (Grades 1–2), Preparatory (Grades 3–5), and Middle (Grades 6–8). Accordingly, assessments are conducted in Grades 3, 6, and 9. It is important to note that linking PARAKH Rashtriya Sarvekshan 2024 to previous NAS cycles is not a primary objective. PARAKH Rashtriya Sarvekshan is conceptually and methodologically distinct from NAS.

Table 1.1 presents the timelines and key details of these assessments.

Table 1.1: Timelines and key details of National Achievement Survey (NAS) and PARAKH Rashtriya Sarvekshan

Year	NAS/PARAKH Rashtriya Sarvekshan	Subject Tested	Reporting level
2001-2002	Grade 5 (Cycle 1)	Mathematics, Language, and Environmental Studies	National and States/UTs
2002-2003	Grade 8 (Cycle 1)	Mathematics, Language, Science, and Social Science	
2003-2004	Grade 3 (Cycle 1)	Mathematics and Language	
2005-2006	Grade 5 (Cycle 2)	Mathematics, Language, and Environmental Studies	
2007-2008	Grade 3 (Cycle 2)	Mathematics and Language	
2007-2008	Grade 8 (Cycle 2)	Mathematics, Language, Science, and Social Science	
2009-2011	Grade 5 (Cycle 3)	Mathematics, Language, and Environmental Studies	
2010-2013	Grade 8 (Cycle 3)	Mathematics, Language, Science, and Social Science	
2012-2013	Grade 3 (Cycle 3)	Mathematics and Language	
2014-2015	Grade 5 (Cycle 4)	Mathematics, Language, and Environmental Studies	
2014-2015	Grade 3 (Cycle 4)	Mathematics and Language	
2015-2016	Grade 8 (Cycle 4)	Mathematics, Language, Science, and Social Science	
2015-2016	Grade 10 (Cycle 1)	Mathematics, Science, Social Science, Language, MIL	
			National, States/UTs and District
2017-2018	Grade 3	Environmental Studies, Mathematics, and Language	
	Grade 5	Environmental Studies, Mathematics, and Language	
	Grade 8	Mathematics, Language, Science, and Social Science	
2017-2018	Grade 10	Mathematics, Science, Social Science, Language, MIL	
2021-2022	Grade 3	Environmental Studies, Mathematics, and Language	
	Grade 5	Environmental Studies, Mathematics, and Language	
	Grade 8	Mathematics, Language, Science, and Social Science	
	Grade 10	Mathematics, Modern Indian Language (MIL), Science, Social Science, and English	
2024-2025*	Grade 3	Mathematics, and Language	
	Grade 6	The World Around Us, Mathematics, and Language	
	Grade 9	Mathematics, Language, Science, and Social Science	

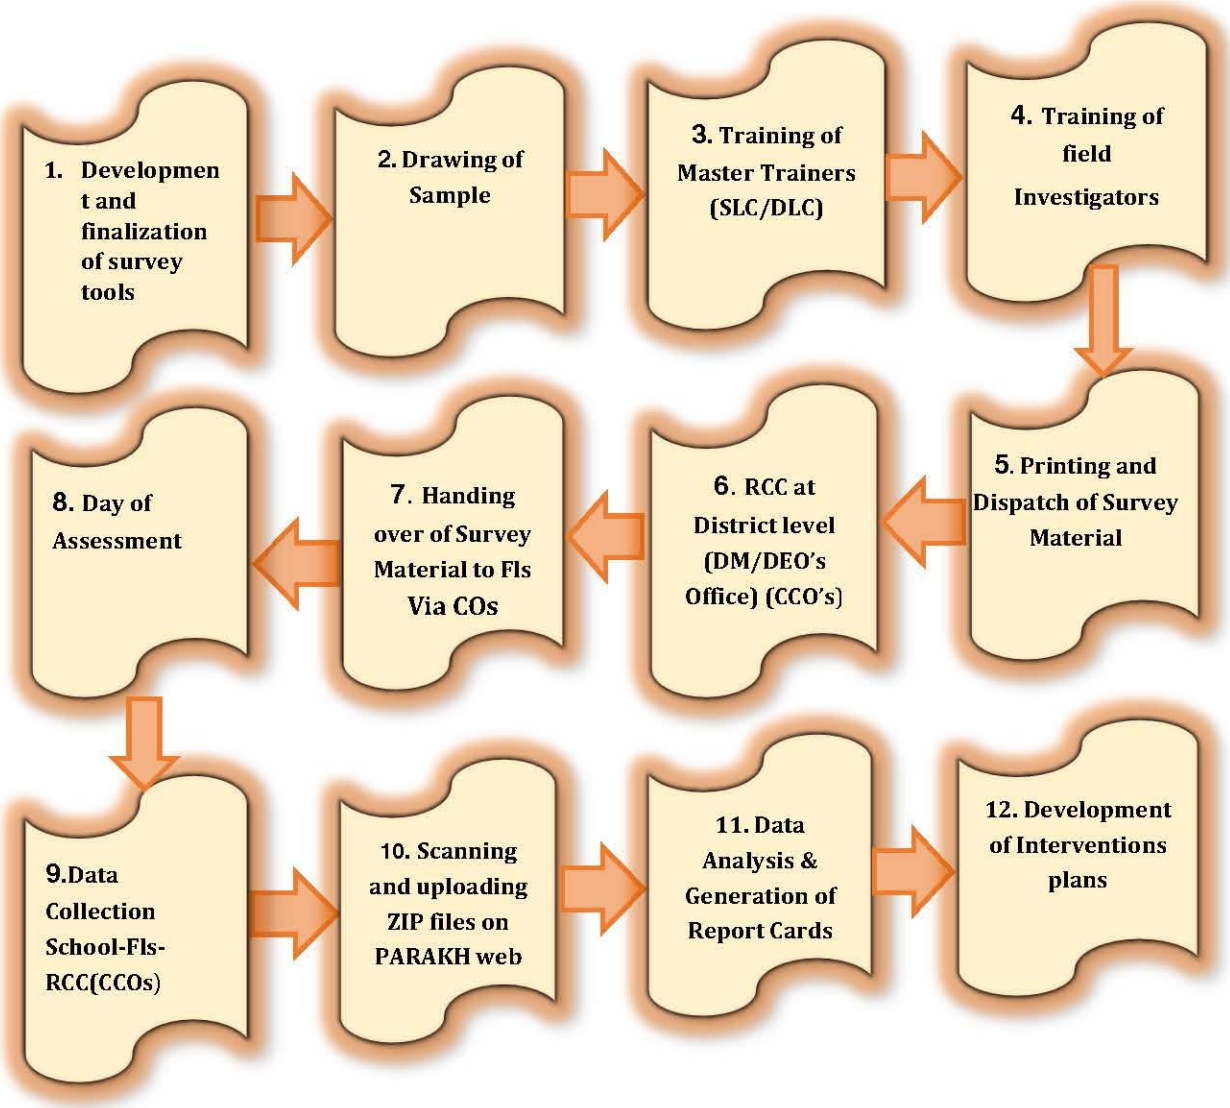

* PARAKH Rashtriya Sarvekshan

Key Features of PARAKH Rashtriya Sarvekshan 2024

1. PARAKH Rashtriya Sarvekshan focused on assessing students' competencies in alignment with NCF-FS and NCF-SE.
2. Used scientifically designed sampling methods to ensure district-level, state-level and national-level representativeness.
3. Followed a rigorous, multi-stage sampling framework for selecting schools and students.
4. PARAKH Rashtriya Sarvekshan was administered to sample students at the end of foundation stage (Grade 3), end of preparatory stage and end (Grade 6) of middle stage (Grade 9).
5. The test was developed and administered in 23 languages used as the medium of instruction.
6. PARAKH Rashtriya Sarvekshan 2024 covered state government, government-aided, private recognised, and central government schools across the country.
7. Collected information on school, teacher, and student backgrounds to better understand factors affecting learning.
8. Each individual district was taken as a unit of analysis and reporting.
9. Generated district-level, state-level, and national-level insights to support policy decision and improve classroom practices.

Process of the PARAKH Rashtriya Sarvekshan 2024

PARAKH Rashtriya Sarvekshan 2024 provides stakeholders with robust and reliable insights into the state of the education system, particularly in relation to quality, equity, and efficiency. The following figure outlines the activities undertaken in the design, implementation, and reporting phases of PARAKH Rashtriya Sarvekshan 2024. Each of these activities was carefully planned, executed, and documented in accordance with international best practices to uphold the highest levels of technical rigor.

1.4 PARAKH Rashtriya Sarvekshan 2024 Assessment Design

PARAKH Rashtriya Sarvekshan 2024 was designed using a competency-based framework aligned with key national and international benchmarks, including the National Curriculum Framework for the Foundational Stage (NCF-FS 2022), the National Curriculum Framework for School Education (NCF-SE 2023), and UNESCO's Global Proficiency Framework (GPF). The assessment moved beyond traditional recall-focused evaluations, placing stronger emphasis on conceptual understanding, problem-solving, and the practical application of knowledge. To ensure psychometric rigor and broad content representation, each student received a randomly assigned test form. Multiple forms were linked through automated test assembly, allowing for reliable scaling and valid comparisons of student performance across forms.

A central component of the study was the systematic development of high-quality cognitive test forms and contextual questionnaires. The cognitive instruments were designed to reflect national curricular priorities while remaining aligned with global proficiency expectations. The development process began with the recruitment and structured training of qualified item developers, followed by a rigorous, multi-stage review procedure to maintain content validity, curriculum alignment, and psychometric soundness. To evaluate item functioning and ensure empirical robustness, PARAKH conducted a two-phase pilot study that informed the final selection and refinement of items for the main assessment.

During the assembly of test booklets for all subjects and grades, careful attention was given to achieving balanced representation of competencies, cognitive processes, and item difficulty levels. The entire process was characterised by methodological rigor, technical precision, and strong alignment with the PARAKH Rashtriya Sarvekshan 2024 assessment framework. Collectively, these measures ensured that the assessment would generate valid, reliable, and comparable evidence of student learning across India's diverse educational landscape.

To manage content coverage efficiently, each subject followed a Balanced Incomplete Block (BIB) design. Under this structure, every item appeared in two different booklets, and each block of subject-specific questions was placed twice in each position across the booklet set. This design reduced testing load on individual students while maintaining broad coverage and supporting robust psychometric linking.

Table 1.2: Number of Booklets by Grade and Subject

Grade	Subject Assessed	Number of Booklets
3	Language, Mathematics	6
6	Language, Mathematics, The World Around Us	6
9	Language, Mathematics, Science, Social Science	8

1.5 Contextual Questionnaire

PARAKH Rashtriya Sarvekshan 2024 incorporated contextual components by engaging students, teachers, and school representatives, to explore their educational backgrounds, experiences, and values. To achieve this, three questionnaires were used: Pupil Questionnaire (PQ), Teacher Questionnaire (TQ), and School Questionnaire (SQ). These tools were designed to gather critical

information to inform national policy decisions. The questionnaire was aligned with the goals and competencies listed in National Curriculum Framework (NCF) 2023.

The development of these questionnaires built upon the previous years' national achievement surveys, improving the quality and relevance of the data while optimizing the response burden on students, teachers, and school representatives. This iterative process included adding new items, refining existing items, and removing outdated or irrelevant items.

❖ Key Focus Areas for Contextual Components

Within the PQ, TQ, and SQ, items were designed to gather essential insights into the following key areas:

- Relevance to the Indian Educational Context: Adding relevant information that is critical to the Indian educational landscape.
- Civics and Citizenship Literacy: Evaluating students' knowledge and understanding of civics and citizenship concepts and principles.
- Information Communication Technology (ICT) Proficiency: Measuring students' proficiency and usage of information communication technologies.
- Stage-Appropriate Competencies: Addressing competencies outlined in the NCF 2023 that are not assessed through multiple-choice cognitive tests.

1.6. Research Questions for PARAKH Rashtriya Sarvekshan 2024

The PARAKH Rashtriya Sarvekshan 2024 was designed to address key research questions across three administrative levels: District, State, and National. The analysis of assessment data aimed to provide insights into student performance, participation trends, and contextual factors influencing students' learning. The analysis of PARAKH Rashtriya Sarvekshan 2024 data was designed to generate meaningful insights and statistical evidence to address the research questions outlined below. These questions applied to all grades and subjects assessed in PARAKH Rashtriya Sarvekshan 2024.

Student Performance and Achievement Trends

1. How does student performance vary across district, state, and national levels?
2. What percentage of students at each level fall into the three performance categories- basic, proficient, and advanced?
3. How do student achievement levels compare across different demographic and contextual subgroups?
    a. Gender: Girls vs. Boys
    b. Location: Rural vs. Urban
    c. School Management Type: State Government, Central Government, Private, Government-aided
    d. Social Categories: Scheduled Tribe (ST), Scheduled Caste (SC), Other Backward Classes (OBC), and General
    e. Other relevant indices or factors identified through factor analysis of background questionnaires

Subject-Specific and Grade-Wise Performance

1. How does student performance vary across different subjects and grade levels at the District, State, and National levels based on the distribution of students across proficiency levels?

Insights from Background Questionnaires (Pupil, teacher and school questionnaires)

1. How do key indices that were derived from the background questionnaire correlate with student performance?
2. How do key indices that were derived from the background questionnaire correlate with student performance across District and State levels?

To validate the significance of the findings and trends observed in student achievement, statistical methods were applied to compare performance across National, State, and District levels. Tests of significance were conducted to determine whether variations in proficiency across regions and demographic groups were statistically meaningful.

1.7 Administration

PARAKH Rashtriya Sarvekshan 2024 integrated traditional paper-based tests with Optical Mark Recognition (OMR) technology. This approach enhanced data accuracy while ensuring efficiency in processing large-scale assessments. Additionally, the survey administration adhered to internationally recognized technical standards, ensuring high-quality data collection and analysis that aligned with global best practices.

The PARAKH Rashtriya Sarvekshan 2024 operated through a structured hierarchy of roles and responsibilities. At the national level, PARAKH, NCERT and CBSE, jointly led by the Ministry of Education, led the PARAKH Rashtriya Sarvekshan 2024, while at the state level SPDs/SCERTs/SIEs/DIETs provided the necessary guidance and support for its implementation at district level. The roles and functions of each of the institutions/functionaries have been explained and defined in Operational Guideline of PARAKH Rashtriya Sarvekshan 2024.

Execution

The successful execution of PARAKH Rashtriya Sarvekshan 2024 was driven by a well-coordinated network of educational leaders and administrators across 36 States and Union Territories, covering 781 districts. This collaborative effort ensured the seamless implementation of the nationwide assessment, engaging multiple levels of educational functionaries.

Key administrative stakeholders included:

- **PARAKH, NCERT and CBSE:** Responsible for national-level administration, oversight, and policy direction.
- **PARAKH State-Level Coordinators (SLCs):** Comprising SCERT Directors and associates from Samagra Shiksha, these leaders oversaw state-level implementation.
- **PARAKH District-Level Coordinators (DLCs):** Ensured smooth execution at the grassroots level by coordinating with schools.
- **Field Investigators:** On-ground personnel responsible for accurate data collection and verification.

- **CBSE Regional Coordinators & Observers:** Providing regional oversight and ensuring quality assurance at various levels.

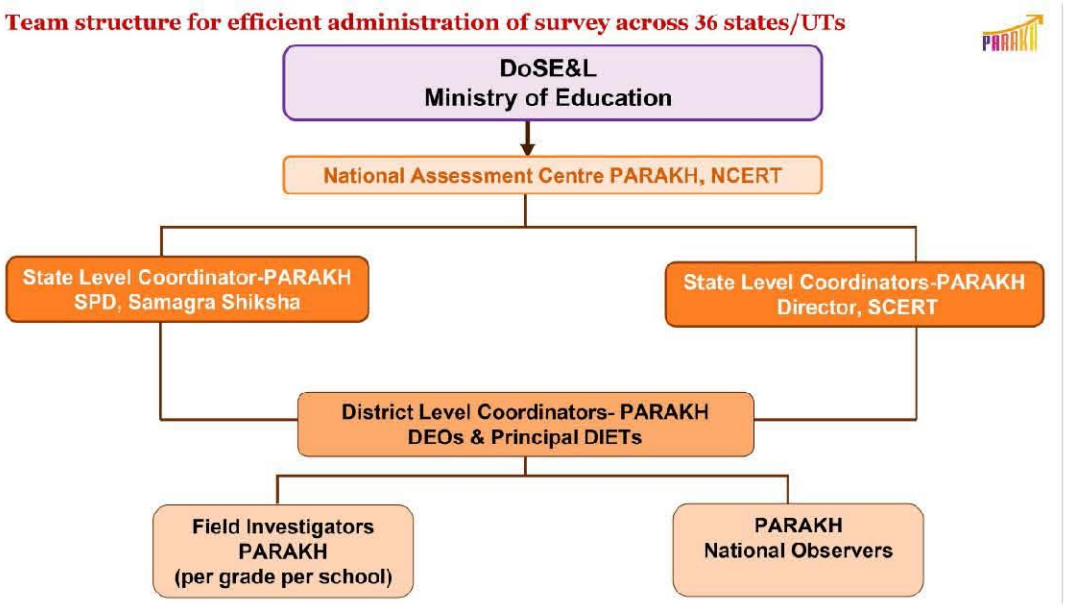

Figure 3: Team structure for PARAKH Rashtriya Sarvekshan 2024 administration

The extensive network worked towards a unified goal, enhancing educational outcomes and driving data-informed decision-making for millions of students across India.

Nationwide Training Capacity Building Workshops

To ensure a smooth and efficient implementation of the assessment, PARAKH adopted a cascade training model designed to equip all functionaries with the necessary knowledge and skills. The training initiative includes:

- **State-Level and District-Level Training:** Nationwide workshops organized to train SLCs and DLCs in assessment methodologies, logistical planning, and survey execution.
- **Observer and Field Investigators Training:** Trained SLCs and DLCs further imparted knowledge and practical insights to Field Investigators and Observers, ensuring uniformity and accuracy in data collection across districts.

This structured training framework guaranteed that all personnel involved in PARAKH Rashtriya Sarvekshan 2024 were well-prepared to execute their responsibilities effectively.

1.8 Summary

PARAKH Rashtriya Sarvekshan 2024 represents a significant evolution in India's large-scale educational assessments aligned with the National Curriculum Frameworks (NCF-FS 2022, NCF-SE 2023) and global assessment standards. By focusing on competency-based evaluations, integrating internationally recognized frameworks, and employing innovative assessment methodologies, PARAKH Rashtriya Sarvekshan 2024 aims to provide a more comprehensive, reliable, and globally relevant measure of student learning outcomes. This initiative not only supports the objectives of NEP 2020 but also contributes to India's broader vision of fostering educational excellence and aligning with international benchmarks. As the education landscape continues to evolve, PARAKH

Rashtriya Sarvekshan 2024 is poised to play a crucial role in shaping future educational policies, ensuring data-driven decision-making, and enhancing learning outcomes for students across the nation.

Chapter 2: Assessment Framework

PARAKH Rashtriya Sarvekshan 2024 is a national assessment designed to evaluate and monitor the performance of India's school education system. Managed by the National Assessment Center, PARAKH (Performance Assessment, Review, and Analysis of Knowledge for Holistic Development), NCERT under the Ministry of Education (MoE), it aims to provide deep insights into educational achievements. The assessment is structured to align with the objectives of the National Education Policy (NEP) 2020, incorporating modifications from the previous NAS to establish a new trendline for educational achievement data.

The PARAKH Rashtriya Sarvekshan 2024 targets the assessment of competencies in Language, Mathematics, The World Around Us, Science, and Social Science at the end of the foundational, preparatory, and middle stages. It is a new, large-scale assessment aligned with the National Curriculum Framework for Foundational Stage 2022 (NCF-FS 2022) and National Curriculum Framework for School Education 2023 (NCF-SE 2023) frameworks. This assessment will evaluate students in Grades 3, 6, and 9. Although it differs from its predecessor, National Assessment Survey (NAS) 2021.

This chapter outlines the design and content of PARAKH Rashtriya Sarvekshan 2024, detailing subject-wise distribution across the Grades. It also introduces the Contextual Questionnaire Framework, covering Pupil (PQ), Teacher (TQ), and School (SQ) questionnaires, along with their development, implementation, and role in capturing educational contexts. Additionally, it highlights the indices used to analyze factors like learning aspirations, socio-emotional well-being, and school infrastructure.

2.1 PARAKH Rashtriya Sarvekshan 2024 and NAS 2021 Assessment Design

Review of NAS 2021 Design

National Achievement Survey 2021 covered the grade 3, 5,8 and 10. In NAS 2021, Grade 3 students were assessed in Language (15 items), Mathematics (17 items), and Environmental Studies (15 items) using four booklets, each containing a total of 47 questions. The overall design incorporated both new items and 5 anchor items per booklet. This comprehensive approach yielded 45 unique test items for both Language and EVS, and 53 unique items for Mathematics. The assessment was a 90-minute session, with learners randomly receiving one of the four developed test booklets.

Table 2.1: NAS 2021 Booklet Design for Grade 3.

Booklet	Section 1	Section 2	Section 3	Number of Items
1	L: 10 + 5[1]	M: 12 + 5	E: 10 + 5	47
2	E: 10 + 5	L: 10 + 5	M: 12 + 5	47
3	M: 12 + 5	E: 10 + 5	L: 10 + 5	47
4	E: 10 + 5	M: 12 + 5	L: 10 + 5	47
L = Language, M = Mathematics, E = Environmental Studies [1] The summation means 10 unique + 5 anchor items				

The design for Grade 5 in NAS 2021 was similar to that of Grade 3, but the four booklets contained 53 items instead of 47. Specifically, these items were distributed as 10 new items plus 5 anchor items for Language (L: 10 + 5), 15 new items plus 5 anchor items for Mathematics (M: 15 + 5), and 13 new items plus 5 anchor items for Environmental Studies (E: 13 + 5). This resulted in a total of 45 unique items for Language, 65 for Mathematics, and 57 for EVS. Learners were administered one of the four booklets using a spiral design, and the assessment duration was 90 minutes.

In contrast, the design for Grade 8 in NAS 2021 was different from the designs for Grades 3 and 5 because four subjects were assessed instead of three: Language, Mathematics, Science, and Social Science. This design consisted of four booklets of 60 items each. Learners were assessed on two of the four subjects with 30 items for each subject. This approach resulted in a total of 54 unique items for each subject. Learners were randomly administered one of the four booklets, and the duration of the assessment was 120 minutes.

Table 2.2: NAS 2021 Booklet Design for Grade 8.

Booklet	Section 1	Section 2	Number of Items
1	L: 24 + 6[1]	M: 24 + 6	60
2	M: 24 + 6	SST: 24 + 6	60
3	SC: 24 + 6	L: 24 + 6	60
4	SST: 24 + 6	SC: 24 + 6	60
L = Language; M = Mathematics, SC = Science, SST = Social Science [1] The summation means 24 unique + 6 anchor items			

The Grade 10 design was similar to Grade 8, but it involved five subjects—Modern Indian Language (MIL), Mathematics, Science, Social Science, and English (EN)—and five booklets. These booklets comprised 70 items instead of 60, with 28 new and 7 anchor items per subject, yielding 63 unique items for each subject.

1.2. PARAKH Rashtriya Sarvekshan Design

Drawing on a comprehensive review of the NAS 2021 design, the PARAKH Rashtriya Sarvekshan 2024 introduced two significant methodological advancements aimed at enhancing efficiency, statistical robustness, and analytical depth.

1. Adoption of Balanced Incomplete Block (BIB) Designs with Booklet Spiralling
2. Incorporation of Plausible Values (PVs) for Reporting Results

Adoption of Balanced Incomplete Block (BIB) Designs with Booklet Spiralling

A cornerstone innovation is the systematic use of Balanced Incomplete Block (BIB) designs, a well-established and highly efficient class of experimental designs with a long history in combinatorial mathematics and survey methodology (Fisher, 1935; Bose, 1939). BIB designs excel at estimating population parameters (e.g., means, proficiency levels) with minimal bias and maximum precision, even when not every student responds to every item.

These designs have proven their value in major educational assessments worldwide, including the National Assessment of Educational Progress (NAEP) in the United States (Beaton, 1983; Knapp, 1968) and large-scale international surveys such as NAEP, PISA, PIRLS, and TIMSS. They are particularly effective in matrix-sampling frameworks, where different subsets of students receive different combinations of items, as exemplified in PISA's multiple matrix sampling approach (Frey et al., 2009; Rutkowski et al., 2014).

For the Grade 3, Language assessment in PARAKH Rashtriya Sarvekshan 2024, 45 items were assessed in one booklet. BIB structure ensured that every item appeared an equal number of times across the sample and every pair of items co-occurs with equal frequency, yielding optimal statistical properties.

However, producing and distributing large number of distinct booklets posed substantial logistical challenges, particularly given the survey's ambitious scope: administration in 23 languages, involving extensive translation, rigorous verification, high-quality printing, and timely delivery to schools across diverse linguistic and geographic regions. Translation accuracy and cultural equivalence demanded meticulous attention, while coordinating secure, timely distribution to thousands of schools often in multiple languages simultaneously placed enormous pressure on project timelines and resources.

Large-scale assessments globally face similar constraints. To balance statistical rigour with operational feasibility, it is standard practice to adopt near-balanced or optimally imperfect designs that preserve most of the statistical advantages of a pure BIB while reducing the number of booklets required. This document outlines in detail the descriptive models developed specifically for PARAKH Rashtriya Sarvekshan 2024 to achieve this practical compromise.

2. Incorporation of Plausible Values (PVs) for Reporting Results

The second major advancement is the adoption of plausible values (PVs) a sophisticated imputation technique pioneered by Mislevy (1991), von Davier, Gonzalez, & Mislevy (2009), and others for reporting student proficiency and population statistics.

Although weighted maximum likelihood estimates (WLEs) were used to report NAS 2021 results, PVs are now the international standard in all major large-scale assessments (e.g., PISA, PIRLS, TIMSS, NAEP). Technically, PVs are multiple random draws from a student's posterior distribution of proficiency, conditioned on their item responses and relevant background variables (Wu, 2005; Marsman, Maris, Bechger, & Glas, 2016). By preserving the measurement error structure of the assessment, PVs enable unbiased estimation of population characteristics and accurate modelling of relationships between proficiency and background variables.

A key advantage of PVs is their flexibility: they support both aggregate-level reporting (e.g., national or state means) and analyses that relate proficiency to covariates (e.g., gender, socioeconomic status, school type), all while properly accounting for sampling weights and the complex survey design. Together with advanced scaling methodologies, PVs represent a significant step toward aligning PARAKH Rashtriya Sarvekshan 2024 with global best practices in educational measurement.

Subjects Assessed Across Grades

The assessment design plays a pivotal role in shaping the depth and accuracy of insights gathered on students' learning levels. The PARAKH Rashtriya Sarvekshan 2024 assessment was structured to evaluate students through a multiple-choice question (MCQ) format, ensuring objective measurement across all three assessed grades. Each question provided four response options, requiring students to select the correct or best answer. Given the time constraints of the assessment, the distribution of subjects per test booklet was carefully structured to optimize coverage while maintaining a manageable testing load for students.

- Grade 3: Students were assessed in Language and Mathematics, with both subjects distributed across six test booklets.
- Grade 6: The assessment covered Language, Mathematics, and The World Around Us, with all three subjects included in six test booklets.
- Grade 9: Students were assessed in Language, Mathematics, Science, and Social Science. Given the increase in subject count, each booklet assessed three out of the four subjects, ensuring comprehensive coverage across eight test booklets.

An outline of the subjects included for assessment are as follows:

Table 2.3: Outline of the subjects included for assessment.

→ Subjects ↓ Grades	Language	Mathematics	The World around Us	Science	Social Science
Grade 3	✔	✔			
Grade 6	✔	✔	✔		
Grade 9	✔	✔		✔	✔

3. Assessment Content

The PARAKH Rashtriya Sarvekshan 2024 assessment was meticulously aligned with the National Curricular Frameworks (NCF-FS 2022 and NCF-SE 2023). These frameworks define competencies at different educational stages, foundational, preparatory, and middle. This section presents the specific competencies measured through the cognitive assessments for each grade.

3.1 Criteria for Competency Selection

The selection of competencies was driven by their suitability for assessment through an MCQ format. Only competencies that could yield verifiable evidence of student understanding via multiple-choice questions were included. Some competencies were excluded due to the following limitations:

- Contextual Constraints: Certain skills required situational or sensory experiences beyond the scope of a written test (e.g., differentiating between sounds).
- Skill-Based Limitations: Some competencies focused on behavioral attributes, creative expression, or extended responses that could not be captured using MCQs (e.g., demonstrating empathy or writing extended passages).

3.2 Assessment Framework for the End of Foundational Stage (Grade 3)

At the end of the Foundational stage, learners were assessed on the competencies enlisted in NCF-FS 2022. The list of competencies which were covered in the PARAKH Rashtriya Sarvekshan 2024 for foundational stage (up to Grade 2) are as follows:

Table 2.4: Selected Competencies for Grade 3 Language and mathematics (Foundational Stage)

Curricular Goal (NCF)	Competency (NCF)	Description (NCF)
CG-9	C-9.7	Knows and uses enough words to carry out day-to-day interactions effectively and can guess the meaning of new words by using existing Vocabulary
CG-10	C-10.5	Reads short stories and comprehends their meaning - by identifying characters, storyline and what the author wants to say - on their own
CG-10	C-10.7	Reads and comprehends the meaning of short news items, instructions and recipes, and publicity material

Curricular Goal (NCF)	Competency (NCF)	Description (NCF)
CG-8	C-8.1	Sorts objects into groups and sub-groups based on more than one property
CG-8	C-8.2	Identifies and extends simple patterns in their surroundings, shapes, and numbers
CG-8	C-8.4	Arranges numbers up to 99 in ascending and descending order
CG-8	C-8.5	Recognises and uses numerals to represent quantities up to 99 with the understanding of decimal place value system
CG-8	C-8.6	Performs addition and subtraction of 2-digit numbers fluently using flexible strategies of composition and decomposition of both numerical and word problems
CG-8	C-8.7	Recognises multiplication as repeated addition and division as equal sharing
CG-8	C-8.8	Recognises, makes, and classifies basic geometric shapes and their observable properties, and understands and explains the relative relation of objects in space
CG-8	C-8.9	Selects appropriate tools and units to perform simple measurements of length, weight, and volume of objects in their immediate environment
CG-8	C-8.10	Performs simple measurements of time in minutes, hours, day, weeks, and months
CG-8	C-8.11	Performs simple transactions using money up to INR 100
CG-8	C-8.12	Develops adequate and appropriate vocabulary for comprehending and expressing concepts and procedures related to quantities, shapes, space, and measurements
CG-8	C-8.13	Formulates and solves simple mathematical problems related to quantities, shapes, space, and measurements

3.3. Assessment Framework for End of Preparatory Stage (Grade 6)

Table 2.5 outlines the two selected competencies for the Language subject in Grade 6 at the end of the Preparatory Stage (NCF-SE 2023,p. 222). CG-2, is defined as: "Develops the ability to read with comprehension by gaining a basic understanding of different forms of familiar and unfamiliar texts (such as prose and poetry)". Both the competencies of this curricular goal was assessed in the survey.

The competencies related to listening, speaking, and writing skills could not be assessed using the MCQ format (e.g., C-1.1: "Converses fluently and meaningfully in different contexts"). Table 2.5 highlights the selected competencies for Language at the end of Preparatory stage.

Table 2.5: Selected Competencies for Grade 6 *Language (Preparatory Stage).*

Curricular goal (NCF)	Competency (NCF)	Description (NCF)
CG-2	C-2.1	Applies varied comprehension strategies (inferring, predicting, visualising) to understand different texts
CG-2	C-2.2	Understands main ideas and draws essential conclusions from the material read

In Table 2.6, the ten selected competencies for the subject of Mathematics for Grade 6 at the end of the preparatory stage are displayed (NCF-SE 2023, pp. 253-254). Here, CG-1 is defined as "Understands numbers (counting numbers and fractions), represents whole numbers using the Indian place value system, understands and carries out the four basic operations with whole numbers, and discovers and recognizes patterns in number sequences", CG-2 as "Analyses the characteristics and properties of two – and three-dimensional geometric shapes, specifies locations and describes spatial relationships, and recognizes and creates shapes that have symmetry", CG-3 as "Understands measurable attributes of objects and the units, systems, and processes of such measurement, including those related to distance, length, weight, area, volume, and time using non-standard and standard units", and CG-4 as "Develops problem-solving skills with procedural fluency to solve mathematical puzzles as well as daily-life problems, and as a step towards developing computational thinking". In PARAKH Rashtriya Sarvekshan 2024, 53% i.e., ten out of nineteen competencies from the mathematics learning standard were assessed.

Table 2.6: Selected Competencies for Grade *6 Mathematics (Preparatory Stage).*

Curricular Goal (NCF)	Competency (NCF)	Description (NCF)
CG-1	C-1.1	Represents numbers using the place value structure of the Indian number system, compares whole numbers, and knows and can read the names of very large numbers
CG-1	C-1.2	Represents and compares commonly used fractions in daily life (such as ½, ¼) as parts of unit wholes, as locations on number lines and as divisions of whole numbers
CG-1	C-1.3	Identifies relationships amongst operations and applies the four basic operations on whole numbers to solve daily life problems
CG-1	C-1.4	Discovers, recognises, describes, and extends simple number patterns such as odd numbers, even numbers, square numbers, cubes, powers of 2, powers of 10, and Virahanka--Fibonacci numbers
CG-2	C-2.2	Identifies and builds a three-dimensional object from two-dimensional representations of that object.
CG-2	C-2.4	Recognises and creates symmetry (reflection, rotation) in familiar 2D and 3D shapes
CG-3	C-3.3	Carries out simple unit conversions, such as from centimetres to metres, within a system of measurement, and solves daily life problems
CG-3	C-3.5	Devises strategies for estimating the distance, length, time, perimeter (for regular and irregular shapes), area (for regular and irregular shapes), weight, and volume and verifies the same using standard units
CG-4	C-4.1	Solves puzzles and daily-life problems involving one or more operations on whole numbers (including word puzzles and puzzles from 'recreational' areas, such as the construction of magic squares)
CG-4	C-4.2	Selects appropriate methods and tools for computing with whole numbers, such as mental computation, estimation, or paper pencil calculation, in accordance with the context

Table 2.7 shows the eleven selected competencies for The World Around Us at the end of the Preparatory Stage i.e., up to Grade 5 (NCF-SE 2023, pp. 368-370). This is linked to the interdisciplinary area of The World Around Us in the NCF-SE 2023, which is intended to "help students observe, engage with, and understand their immediate social and natural environment" (NCF-SE 2023, p. 386). In the table, CG-1 is defined as "Explores and engages with the natural and socio-cultural environment in their surroundings", CG-2 as "Understands the interdependence in their environment through observation and experiences, developing the basis for appreciation of the idea of 'Vasudhaiva Kutumbakam'", CG-3 as "Explains how to ensure the

safety of self and others in different (normal as well as emergency) situations", CG-4 as "Develops sensitivity towards social and natural environment", and CG-5 as "Develops the ability to read and interpret simple maps".

Table 2.7: Selected Competencies for Grade 6 *The World Around Us (Preparatory Stage).*

Curricular Goal (NCF)	Competency (NCF)	Description (NCF)
CG-1	C-1.1	Observes and identifies the natural (insects, plants, birds, animals, geographical features, sun and moon, stars, planets, natural resources) and social (houses, relationships) components in their immediate environment
CG-1	C-1.3	Asks questions and makes predictions about simple patterns (season change, food chain, phases of the moon, movement of stars and planets, shapes of trees, plants, leaves, and flowers, rituals, celebrations) observed in the immediate environment
CG-1	C-1.4	Explains the functioning of local institutions (family, school, bank/post office, market, and Panchayat) in different forms (story, drawing, tabulating data, reports), and analyses their roles.
CG-2	C-2.1	Identifies natural and humanmade systems that support their lives (water supply, water cycle, river flow systems, seasons, life cycle of plants and animals, food, household items, transport, communication, electricity in the home)
CG-2	C-2.2	Describes the relationship between the natural environment and cultural practices in their immediate environment (nature of work, food, festivals, traditions)
CG-3	C-3.1	Describes the basic safety needs and protection (health and hygiene, food, water, shelter, precautions, awareness of emergency situations, abuse, and unsafe situations) of humans, birds, and animals
CG-3	C-3.2	Discusses how to prepare for emergency situations (smoke, fire, small injuries, burns, electrical safety, unseasonal rains, fallen trees) based on discussions with family and community, or personal experiences
CG-4	C-4.1	Observes and describes diversity among plants, and birds and animals in their immediate environment (shape, sounds, food habits, growth, habitat)
CG-4	C-4.3	Describes usage of natural resources in their immediate environment
CG-4	C-4.7	Learns about basic social and behavioural norms, values, and dispositions that benefit our social and natural environments and that help our society function smoothly (using dustbins, standing in queues, conserving water, using public transportation, keeping one's environment clean, always helping others in need regardless of background)
CG-5	C-5.3	Reads simple maps of city, state, and country to identify natural and human-made features (well, lake, post office, school, hospital) with reference to symbols and directions

3.4 Assessment Framework for End of Middle Stage (Grade 9)

Table 2.8 shows the testable competency for Grade 9 language at the end of the Middle Stage (NCF-SE 2023, pp. 223). For this stage, competency C-1.1 which is defined as "Identifies main points and summarises from careful listening or reading of the text (news articles, reports, and editorials)" from CG-1 i.e., Develops the capacity for effective communication using language skills for description, analysis and response (NCF-SE, 2023, p. 223) has been selected to be assessed in PARAKH Rashtriya Sarvekshan 2024.

Tablex2.8: Selected Competencies for Grade 9 *Language (Middle Stage).*

Curricular goal (NCF)	Competency (NCF)	Description (NCF)
CG-1	C-1.1	Identifies main points and summarises from a careful listening or reading of the text (news articles, reports, editorials)

3.4.2 Mathematics Assessment for Grade 9

Table 2.9 shows the twelve selected, testable competencies for Mathematics in Grade 9 at the end of the middle stage (NCF-SE 2023, pp. 255-257). Here, CG-1 is defined as "Understands numbers and sets of numbers (whole numbers, fractions, integers, rational numbers, and real numbers), looks for patterns, and appreciates relationships between numbers", CG-2 as "Understands the concepts of variable, constant, coefficient, expression, and (one-variable) equation, and uses these concepts to solve meaningful daily-life problems with procedural fluency", CG-3 as "Understands, formulates, and applies properties and theorems regarding simple geometric shapes (2D and 3D)" CG-4 as "Develops understanding of perimeter and area for 2D shapes and uses them to solve day-to-day life problems", CG-5 as "Collects, organises, represents graphically and in tables), and interprets data/information from daily-life experiences", and CG-6 as "Develops mathematical thinking and the ability to communicate mathematical ideas logically and precisely". In PARAKH Rashtriya Sarvekshan 2024, 40% i.e., twelve out of thirty of the competencies from the mathematics learning standard was assessed.

Table 9: Selected Competencies for Grade 9 *Mathematics (Middle Stage).*

Curricular Goal (NCF)	Competency (NCF)	Description (NCF)
CG-1	C-1.2	Discovers, identifies, and explores patterns in numbers and describes rules for their formation (e.g., multiples of 7, powers of 3, prime numbers), and explains relations between different patterns
CG-1	C-1.4	Explores and understands sets of numbers, such as whole numbers, fractions, integers, rational numbers, and real numbers, and their properties, and visualises them on the number line

CG-1	C-1.5	Explores the idea of percentage and apply it in solving problems.
CG-1	C-1.6	Explores and applies fractions (both as ratios and in decimal form) in daily-life situations.
CG-2	C-2.2	Extends the abstract representation of a number in the form of a variable or an algebraic expression using a variable.
CG-2	C-2.3	Forms algebraic expressions using variables, coefficients, and constants and manipulates them through basic operations.
CG-2	C-2.5	Develops own methods to solve puzzles and problems using algebraic thinking.
CG-3	C-3.2	Knows properties of lines, angles, triangles, quadrilaterals, and polygons, and applies them to solve related problems.
CG-3	C-3.5	Understands congruence and similarity as it applies to geometric shapes and identifies similar and congruent triangles
CG-4	C-4.1	Discovers, understands, and uses formulae to determine the area of a square, triangle, parallelogram, and trapezium and develops strategies to find the areas of composite 2D shapes
CG-5	C-5.1	Collects, organises, and interprets the data using measures of central tendencies such as average/mean, mode, and median
CG-6	C-6.1	Applies both inductive and deductive logic to formulate definitions and conjectures, evaluate and produce convincing arguments/ proofs to turn these definitions and conjectures into theorems or correct statements, particularly in the areas of algebra, elementary number theory, and geometry

3.4.3 Science Assessment for Grade 9

Table 2.10 shows the twelve selected competencies for Science in Grade 9 at the end of the Middle Stage (NCF-SE 2023, pp. 278-280). In this table, CG-1 refers to "Explores the world of matter and its constituents, properties, and behaviour", CG-2 to "Explores the physical world in scientific and mathematical terms", CG-3 to "Explores the living world in scientific terms", CG-4 to "Understands the components of health, hygiene, and well-being", and CG-7 to "Communicates questions, observations, and conclusions related to Science". In PARAKH Rashtriya Sarvekshan 2024, 44% i.e., twelve out of twenty-seven of the competencies from the Science learning standard was assessed.

Table 10: Selected Competencies for Grade 9 *Science (Middle Stage).*

Curricular Goal (NCF)	Competency (NCF)	Description (NCF)
CG-1	C-1.1	Classifies matter based on observable physical (solid, liquid, gas, shape, volume, density, transparent, opaque, translucent, magnetic, non-magnetic, conducting, non-conducting) and chemical (pure, impure; acid, base; metal, non-metal; element, compound) characteristics
CG-1	C-1.2	Describes changes in matter (physical and chemical) and uses particulate nature to represent the properties of matter and the changes
CG-1	C-1.4	Observes and explains the phenomena caused due to differences in pressure, temperature, and density (e.g., breathing, sinking-floating, water pumps in homes, cooling of things, formation of winds)
CG-2	C-2.1	Describes one-dimensional motion (uniform, nonuniform, horizontal, vertical) using physical measurements (position, speed, and changes in speed) through mathematical and diagrammatic representations
CG-2	C-2.2	Describes how electricity works through manipulating different elements in simple circuits and demonstrates the heating and magnetic effects of electricity
CG-2	C-2.3	Describes the properties of a magnet (natural and artificial; Earth as a magnet)
CG-2	C-2.4	Demonstrates rectilinear propagation of light from different sources (natural, artificial, reflecting surfaces), verifies the laws of reflection through manipulation of light sources and objects and the use of apparatus and artefacts (such as plane and curved mirrors, pinhole camera, kaleidoscope, periscope)
CG-3	C-3.1	Describes the diversity of living things observed in the natural surroundings (insects, earthworms, snails, birds, mammals, reptiles, spiders, diverse plants, and fungi), and at a smaller scale (pond water, animal and plant bodies, other microscopic organisms)
CG-3	C-3.2	Distinguishes the characteristics of living organisms (need for nutrition, growth and development, need for respiration, response to stimuli, reproduction, excretion, cellular organisation) from non-living things
CG-4	C-4.1	Undertakes a nutrition-based analysis of food components with special reference to Indian culinary practices and modern understanding of nutrition, and explains the effect of nutrition on health
CG-4	C-4.3	Describes biological changes (growth, hormonal) during adolescence, and measures to ensure overall well-being
CG-7	C-7.3	Represents real world events and relationships through diagrams and simple mathematical representations

3.4.3 Social Science Assessment for Grade 9

In Table 2.11, fifteen selected, testable competencies (NCF-SE, 2023, pp. 303-305) are displayed for Social Science at the end of the Middle Stage i.e., up to Grade 8. In this table, CG-1 refers to "Comprehends and interprets sources related to different aspects of human life and makes meaningful interpretations", CG-2 to

"Explores the process of continuity and change in human civilisations through specific examples from their context and a few historical episodes", CG-3 to "Draws connections between the causes and effects of different social and historical events or episodes and connects them with the overall impact on human life", CG-4 to "Understands the functioning of social, cultural, and political institutions and their impact on society, and the way individuals and collectives shape these institutions", CG-6 to "Understands the spatial distribution of resources (from local to global), their conservation, the interdependence between natural phenomena and human life, and their environmental and other implications", CG-7 to "Appreciates the importance and meaning of being Indian (Bharatiya) by understanding (a) India's rich past and present including its glorious cultural unity in diversity, pluralism, heritage, traditions, literature, art, architecture, philosophy, medicine, science, and other contributions to humanity, and (b) other integrating factors despite the geographical diversity of India.", CG-8 to "Understands and appreciates the process of development of the Constitution of India and upholds its importance to promote democratic values in Indian society", and CG-9 to "Understands the processes of economic activities (production and consumption, trade, and commerce)". In PARAKH Rashtriya Sarvekshan 2024, 68% i.e., fifteen out of twenty-two of the competencies from the Social Science learning standard was assessed..

Table 2.11 Selected Competencies for Grade 9 *Social Science (Middle Stage).*

Curricular Goal (NCF)	Competency (NCF)	Description (NCF)
CG-1	C-1.1	Collects and interprets multiple sources of information (primary and secondary) to understand the historical, cultural, geographical, and socio-political aspects of human life
CG-1	C-1.2	Represents and analyses data related to various aspects of human life given in the form of text, tables, charts, diagrams, and maps
CG-2	C-2.1	Explains and analyses major changes in the past and their impact on society
CG-2	C-2.2	Recognises elements of the continued prevalence of certain beliefs, relationships, practices, and activities in human society, notwithstanding major changes in society
CG-3	C-3.1	Analyses the effect of various changes in early human society from nomadism to settled life and early civilisation (such as, the emergence of agriculture, changes in food habits, basic technologies like construction, transport, pottery, metallurgy), and changes in human habitation, family structures and relationships, the nature of work, people's socio-cultural beliefs and concepts over time (e.g., Ahimsa, and the fallout of major wars or invasions) that significantly impacted human societies
CG-7	C-7.1	Explains India's unity in diversity by recognizing commonalities in its rich and diverse cultural elements, languages, art, philosophical ideas, values,

		clothing, cuisines, traditions, festivals, trade, commerce, and health practices including Ayurveda and yoga
CG-7	C-7.2	Discovers the topographical diversity of the Indian landmass from the semi-arid zone in the west and the areas of heavy rains in the north-east to the long coastal areas in the south and the snow-clad mountains in the north, as well as, the rich biodiversity of the country
CG-6	C-6.1	Explains key natural phenomena such as climate, weather, ocean cycles, soil formation, the flow of rivers, and how they are spatially distributed
CG-6	C-6.2	Identifies the distribution of resources such as water, agriculture, raw materials, and services across geographies
CG-6	C-6.3	Analyses Indian perspectives on and efforts towards conservation and sustainability in society, and advocates the importance of the same, and what more needs to be done in these directions including in the context of global climate change
CG-6	C-6.4	Correlates the existence of different patterns of livelihoods with the different types of landforms, availability of resources, and climatic conditions (in local, regional, national, and global contexts).
CG-4	C-4.2	Assesses the influence of social, cultural, and political institutions on an individual/ group/ community/ society in general
CG-8	C-8.2	Explains the process of formation of the Indian Constitution and understands the ideas and ideals of the Indian national movement enshrined in it as well as those drawn from India's civilisational heritage
CG-8	C-8.3	Explains the working of the three tiers of local self-government and appreciates its significance in upholding democracy at the grassroot level
CG-9	C-9.1	Explains the key elements of trade and commerce (commodity, production, consumption, and capital) and its impact on individual life and society

4. Assessment Booklet Design and Item Development

4.1 Booklet Design for Grade 3

For PARAKH Rashtriya Sarvekshan 2024 Grade 3, the main survey design consists of six booklets where it covers end of foundational stage competencies. Furthermore, each subject follows a BIB design, so that each item appears in two booklets, and each block of questions on a particular subject appears twice in each position. These features mitigate position effects, ensure broader content coverage, and strengthen linking. The total number of items in a booklet is 45.

Table 2.12 shows an example BIB design for the Language sections of the booklet design for the main survey for Grade 3. In this design, each booklet consists of three language blocks and each block appears in two

booklets. As noted, the design below is not fully efficient, because only 18 out of 36 pairs of blocks can be observed with 6 booklets. Since there are three competencies, each block can contain one item of each competency. The nine blocks can be assembled using automated test assembly (ATA) methods (e.g., van der Linden, 2005) to optimally balance the psychometric properties obtained from the pilot (e.g., difficulty) and content constraints (e.g., competency, number of words, answer key).

Table 2.12: BIB Design for Language Sections in Booklet Design for Main Survey for Grade 3.

Grade 3	L1	L2	L3	L4	L5	L6	L7	L8	L9
Booklet 1		X				X			X
Booklet 2	X						X	X	
Booklet 3			X	X	X				
Booklet 4			X					X	X
Booklet 5					X	X	X		
Booklet 6	X	X		X					

To ensure a rich and reliable pool of high-quality items, an overhead factor of 2 was applied during the development phase, resulting in the creation of 90 items per subject. Following a large-scale pilot administration, a rigorous selection process was undertaken. The final approx. total 135 items were chosen based on a balanced evaluation of content validity, alignment with the assessment framework, and strong psychometric features (including item difficulty, discrimination, and differential item functioning). In grade 3, total 15 competencies were targeted for PARAKH Rashtriya Sarvekshan 2024, with items distributed proportionally and uniformly across these competencies to guarantee comprehensive and equitable coverage. The outcomes of the pilot study directly informed the finalization of the Main Survey booklet designs, enabling the construction of balanced, efficient, and psychometrically robust assessment instruments.

4.2. Booklet Design for Grade 6

The PARAKHJ Rashtriya Sarvekshan 2024 design consists of six booklets where each student takes all three subjects: Language, Math, and The World Around Us. Again, each subject follows a BIB design, so that each item appears in two booklets, and each subject appears twice in each position. In each booklet, Language was assessed by means of 15 items whereas Mathematics and The World Around Us are assessed by means of 18 items each. The total number of items in a booklet is 51. Also, the total number of items per subject is 45 (Language) and 54 (Mathematics and The World Around Us) and each item appears in two booklets (e.g., 6 x 15 / 2 = 45 items for Language and 6 x 18 / 2 = 54 items for Mathematics and The World Around Us).

Table 13: Booklet Design for Main Survey for Grade 6.

Grade 6	Section 1	Section 2	Section 3	Total Items
Booklet 1	L: 15	M: 18	W: 18	51
Booklet 2	L: 15	W: 18	M: 18	51
Booklet 3	M: 18	L: 18	W: 18	51
Booklet 4	M: 18	W: 18	L: 15	51
Booklet 5	W: 18	L: 15	M: 18	51
Booklet 6	W: 18	M: 18	L: 15	51
L = Language, M = Mathematics, W = The World Around Us				

In Language, items were organized in sets of five questions linked to a single reading passage. This structure allowed students to attempt to 15 Language items in total, a deliberately lighter load compared to the 18 standalone items each in Mathematics and The World Around Us.

To ensure a robust item pool, an overhead factor of 2 was applied during development: 90 items were created for Language and 108 items each for Mathematics and The World Around Us. The remaining aspects of item selection, pilot testing, psychometric analysis, and final booklet assembly.

4.3. Booklet Design for Grade 9

For Grade 9, Main Survey design consist of eight booklets. The goal is to let each student take three out of the four subjects: Language, Mathematics, Science, and Social Science. Also, each item is to appear in two booklets and each of the four subjects is to appear twice in each of three positions in the booklet. Table 2.14 shows the resulting BIB design for 4 subjects,

8 booklets, and 3 subjects per booklet (note that the blocks here are the four subjects). The D-efficiency of this design is 100% with each subject appearing in 6 booklets and each pair of subjects appearing in 4 booklets. Note that 20 items per subject used in PARAKH Rashtriya Sarvekshan 2024, compared to 30 items per subject in NAS 2021. However, students assessed on three instead of two subjects in NAS 2021. Furthermore, the use of PVs allows for incorporating the correlations between the different subjects, thereby enhancing the measurement precision (i.e., the reliability). Also, the total number of items per booklets remains at 60.

Table 2.14: Booklet Design for Main Survey for Grade 9

Grade 9	Section 1	Section 2	Section 3	Total Items
Booklet 1	L: 20	SC: 20	SO: 20	60
Booklet 2	M: 20	SC: 20	SO: 20	60
Booklet 3	SC: 20	SO: 20	M: 20	60

Booklet 4	SC: 20	SO: 20	L: 20	60
Booklet 5	SO: 20	M: 20	L: 20	60
Booklet 6	SO: 20	L: 20	M: 20	60
Booklet 7	L: 20	M: 20	SC: 20	60
Booklet 8	M: 20	L:20	SC: 20	60
L = Language, M = Mathematics, SC = Science, SO = Social Science				

To ensure ample high-quality material for rigorous selection, an overhead factor of 2 was applied, resulting in the development of 120 items per subject for the pilot study. As with the earlier grades, a deliberate effort was made to achieve a uniform and proportional distribution of items across all targeted competencies, thereby guaranteeing balanced and comprehensive coverage of the learning framework in the final assessment.

5. Contextual Questionnaire Framework

The PARAKH Rashtriya Sarvekshan 2024 integrates contextual components by engaging students, teachers, and school administrators to explore their educational backgrounds, experiences, and learning environments. This was achieved through three structured questionnaires: the Pupil Questionnaire (PQ), Teacher Questionnaire (TQ), and School Questionnaire (SQ). These tools aim to gather essential information to inform National Policy decisions, while ensuring the alignment with the competencies and goals as mentioned in the National Curriculum Framework (NCF) 2023 and global best practices.

5.1 Purpose and Significance

Contextual questionnaires play a crucial role in understanding factors influencing student learning processes. They provide insights into socio-economic conditions, school infrastructure, teaching methods, and students' access to resources. By correlating this data with student performance, PARAKH Rashtriya Sarvekshan 2024 seeks to drive data-informed policy decisions and interventions to enhance educational quality across India.

The continuous evolution of these questionnaires, through refining questions, adding new relevant themes, and eliminating outdated ones, ensures the collected data remains relevant and actionable. This iterative approach minimizes response burden while maximizing the depth of insights gained from the surveys.

5.2 Structure and Content of the Questionnaires

5.2.1 Pupil Questionnaire (PQ)

PQ consisted of 47 (118 with sub-parts) close-ended multiple-choice questions for Grades 3, 6, and 9. Out of these, 11 (28 with sub-parts) multiple-choice questions were exclusively for Grade 9, administered to all sampled students. Additional questions for Children with Special Needs were also included in the questionnaire. It included the information on -

- Demographic Information: Age, gender, language used at home, and social background.

- Socio-economic Status: Parental education, household resources, and access to academic support.
- Academic Beliefs and Learning Preferences: Students' perceptions, attitudes, and emotional engagement with academic content and instructional strategies.
- School Infrastructure & Facilities: Access to sanitation, meals, electricity, and learning resources such as libraries and laboratories.
- Teaching and Pedagogical Approaches: Effective learning experiences depend on teaching quality and instructional strategies.
- Social-Emotional Learning (SEL) and Mental Health: Understanding students' emotional intelligence, well-being, and coping strategies in academic settings.
- Future Goals and Career Aspirations: Assesses students' career interests, school support for career development, and their confidence in achieving future goals and handling academic challenges.

5.2.2 Teacher Questionnaire (TQ)

The TQ consisted of 28 (96 with sub-parts) close-ended multiple-choice questions and was administered to each subject teacher teaching the sampled students. It included the information on-

- Demographic and Professional Information: Qualifications, years of experience, and subject specialization.
- Understanding of Educational Frameworks: Evaluates knowledge of NEP 2020, NCF guidelines, and the implementation of holistic progress cards in teaching practices.
- Teaching Practices: Instructional methods, assessment strategies, teaching aids and student engagement techniques.
- Professional Development and Collaborative Practices: Includes involvement in training sessions, teamwork in teaching, and engagement in individual or group research initiatives.
- Classroom Environment: Teacher perceptions of school culture, student-teacher relationships, and disciplinary practices.
- Parental and Community Engagement: Collaboration with parents and community organizations to provide support for students.
- ICT Usage: Access to and integration of digital tools in lesson planning and instruction.
- Mental Health and Well-being: Understanding teacher stress levels and support systems available to them.

5.2.3 School Questionnaire (SQ)

The SQ consisted of 36 (121 with sub-parts) close-ended multiple-choice questions and was administered to the headmaster/principal of the sampled school. It included the questions on-

- Infrastructure and Facilities: Availability of classrooms, libraries, laboratories, and digital learning resources.
- Awareness of Educational Policies and Initiatives: Gather details on understanding of key policies like NEP 2020, NCF-FS 2023, NCF-SE 2023, and the use of initiatives such as Holistic Progress Cards (HPC).
- Administrative Practices: School policies on discipline, academic performance tracking, and teacher professional development.
- Parental and Community Engagement: Frequency and nature of interactions with parents and guardians.
- Support for Children with Special Needs (CWSN): Availability of specialized resources, staff training, and inclusive education practices.
- Career Support and Vocational Training: Information on career counseling initiatives and vocational training options available for senior students.
- Mental Health Initiatives: School-wide programs addressing student and teacher mental well-being.

The PARAKH Rashtriya Sarvekshan 2024 represents a significant advancement over previous national assessments by alignment with National Education Policy and adopting international benchmarked design principle balanced incomplete block spiraling, automated test assembly, and the use of plausible values while adapting them pragmatically to India's scale, linguistic diversity, and logistical realities. The resulting Grade 3, 6, and 9 instruments achieve an optimal balance between statistical efficiency, content coverage, student burden, and operational feasibility. These ensure more precise, reliable, and tenable estimates of learning outcomes, thereby providing policymakers and educators with robust evidence to strengthen foundational literacy and numeracy across the country.

Chapter 3: Development of test forms and questionnaires

This chapter outlines the development process of cognitive test forms and questionnaires for PARAKH Rashtriya Sarvekshan 2024, covering the end of the foundational stage (Grade 3), the end of the preparatory stage (Grade 6), and the end of the middle stage (Grade 9). It begins with the engagement and training of item developers, followed by a rigorous review process to ensure the quality and validity of the test items. The chapter also describes the two-phase pilot studies conducted to identify high-quality items for the main survey. It further explains the test form design, ensuring alignment with the assessment framework. Additionally, the test form assembly process is detailed, highlighting the structured methodology used to compile test items into complete test forms. A key aspect of this process was the development of R code for automated test form assembly, enhancing efficiency and ensuring standardization. This approach accounted for item performance and difficulty levels while maintaining a balanced distribution of competencies and key proficiency levels.

.

3.1 Development of the test forms

PARAKH Rashtriya Sarvekshan assess competencies at the end of each learning stage described in the National Curricular Frameworks NCF-FS 2022 and NCF-SE 2023. These frameworks describe curricular goals and the associated competencies for the foundational, preparatory, and middle stages. This section presents the competencies that will be measured through the cognitive assessments for each grade. In reviewing the full range of competency statements in the NCF, only those that could reliably generate evidence of a learner's competency through multiple-choice questions were selected for assessment in PARAKH Rashtriya Sarvekshan 2024. Other competencies, although important, were not selected for PARAKH Rashtriya Sarvekshan 2024 primarily for two reasons:

- The competency statement was entirely focused on a situation or context that had requirements outside the scope of a paper-and pencil test (e.g., ability to distinguish among different sounds).
- The competency statement was entirely focused on an activity, inclination, disposition, or work product that could not be captured in a multiple-choice format (e.g., the tendency to show kindness).

The steps in the item development process were as follows:

3.1.1 Selection of item-writers

To ensure the development of high-quality and curriculum-aligned assessment items, the selection of item-writers was carried out through a systematic and collaborative process by PARAKH. The item-writers were

selected from a diverse pool of Subject Matter Experts (SMEs) representing various States and Union Territories across the country. These experts brought with them rich experience in subject content, pedagogy, and assessment design.

3.1.2 Training of item writers

PARAKH organized a training programme for item-writers on the principles of writing valid and effective Multiple-Choice Questions (MCQs) and provided an overview of the NCF-FS, NCF-SE, and associated competencies. The training included examples of competency-based items and examples of practices to be avoided. Item-writers were also reminded of the importance of creating items that were easily translatable and of avoiding vocabulary or descriptions with gender, cultural, socioeconomic, or regional biases.

3.1.3 Creation of draft items

After training, each item writer was given a quota of items to produce item as per stage and given competencies within a timeline. Item-writers first submitted a small batch for rapid feedback, after which they developed the remainder of their quota. For Language items, the assessment team produced stimulus passages of appropriate length and grade level, and item-writers created the corresponding items based on these passages.

3.1.4 Review and revision of draft items

As items were submitted, each was given a unique identifier number that encoded its subject area and stage level. Members of the assessment team reviewed and revised items as they received them from item-writers. Revisions were generally of six types:

- correction of typographical or other errors
- adjustment to better fit the target competency
- adjustment of item Language to the appropriate grade-level
- adjustment for better translatability
- addition of necessary information that had been left out
- removal of extraneous, distracting, or biased content.

3.1.5 Piloting of items

Items were assembled into test forms and administered to students at selected schools to collect pilot data. See section 3.3 for details on pilot test form design, school selection, and the collation and analysis of pilot data. Two pilots were conducted, in May and August 2024. The May pilot supplied the bulk of the items for the final survey, while the August pilot provided a reserve set.

3.1.6 Selection of items for the final survey

Following pilot data analysis, items were either approved for use on the final survey or rejected. Refer section 3.3.4 for details on statistical criteria for acceptance or rejection of items. In some cases, items were revised on the basis of pilot data to improve their measurement function in the final survey.

3.1.7 Finalization of master version of items

Items selected for use on the final survey were given an additional review to detect any content or typographical errors that may have been missed. The review was conducted by NCERT faculty in consultation with the PARAKH assessment team. Once an item was approved, it was considered a "master version" ready for translation.

3.1.8 Translation of items

Once the final set of items was finalized in English, it was translated in 23 regional languages. These multilingual versions were then meticulously reviewed. Forward and backward translation were also carried out prior to the finalization of the items for booklet preparation.

3.1.9 Review of items in test forms

After the translated items had been assembled into test forms, they were reviewed again to correct any formatting, content, or typographical errors that may have been introduced during the final stages of preparation. The quality of visual stimuli was also checked for clarity and comprehensibility.

3.2 Development of Questionnaires

PARAKH Rashtriya Sarvekshan 2024 questionnaires were designed to provide a comprehensive view of the educational ecosystem and student backgrounds, aligning with global and national assessment frameworks. This section details the development of the PARAKH Rashtriya Sarvekshan 2024 context questionnaires, aligned with the NCF 2023 and global best practices. Building on previous NAS assessments, it incorporates refined methodologies to better capture India's evolving education landscape for evidence-based policymaking.

A key feature of PARAKH Rashtriya Sarvekshan 2024 is its structured approach to contextual data collection through three distinct tools: the Pupil Questionnaire (PQ), Teacher Questionnaire (TQ), and School Questionnaire (SQ). These instruments provide critical insights into students' socio-economic backgrounds, school infrastructure, teaching methodologies, access to resources, and other factors influencing learning. By correlating these data with student performance, PARAKH Rashtriya Sarvekshan 2024 aims to identify trends and disparities in education, guiding targeted interventions at the national, state, and district levels.

3.2.1 Background Questionnaires for Different Respondent Groups

For PARAKH Rashtriya Sarvekshan 2024, three core context questionnaires—Pupil Questionnaire (PQ), Teacher Questionnaire (TQ), and School Questionnaire (SQ), were administered to collect data on student experiences, teaching practices, and school environments.

Pupil Questionnaire (PQ)

The PQ gathered information on student demographics, socio-economic background, academic beliefs, learning preferences, school infrastructure, teaching quality, socio- emotional learning (SEL), and mental health. The data provides insights into students' academic engagement, well-being, and access to resources.

Teacher Questionnaire (TQ)

TQ covered teacher demographics, instructional strategies, classroom environment, ICT integration, and teacher well-being. The questionnaire aimed to understand how teaching practices and professional challenges influence student learning and classroom engagement.

School Questionnaire (SQ)

SQ collected data on infrastructure, administrative policies, parental engagement, support for CWSN, and mental health initiatives. The findings help assess school-level factors influencing educational quality and student support systems.

3.2.2 Phases of Questionnaire Development

The development of the context questionnaire for PARAKH Rashtriya Sarvekshan 2024 followed a systematic, multi-phase process to ensure the validity, reliability, and alignment of the survey instruments with national and international educational assessment standards. This process involved extensive engagement with subject matter experts, policymakers, and stakeholders, along with iterative quality assurance mechanisms to maintain consistency and comparability across different survey cycles. The following sections provide a summary of each phase of the questionnaire development process and the associated quality assurance strategies.

Development of Initial Item Pool

Questionnaire development for PARAKH Rashtriya Sarvekshan 2024 began with a review of the National Achievement Survey (NAS) questionnaires from previous cycles. This review identified items that remained relevant for tracking trends in student learning and educational environments, ensuring continuity in data collection.

Simultaneously, a theoretical literature review was conducted to develop new items aligned with emerging educational trends and policy priorities while ensuring alignment with NCF 2023 competencies and objectives. Other global assessments such as PISA were also referenced.

The newly developed constructs addressed emerging priorities in education, including student well-being and mental health, student engagement, and competency-based assessments in classrooms. These additions aimed to provide a more comprehensive understanding of the factors influencing students' learning levels.

Refinement of Item Pool and Internal Review

Once the initial item pool was created, multiple rounds of internal review were conducted to refine the questions. Revisions were typically categorized into six types:

- Correction of typographical or formatting errors
- Refinement of language to suit the appropriate audience
- Modifications to enhance translatability across languages
- Inclusion of essential information that had been omitted
- Removal of extraneous, distracting, or biased content

These revisions ensured that all questionnaire items were clearly worded, free from ambiguity, and appropriately structured for the target respondents.

Piloting of Items

To assess the effectiveness of the developed items, pilot testing was conducted in select schools during the second phase of piloting in August 2024. The items were compiled into questionnaire booklets and administered to students, teachers, and school leaders, enabling the PARAKH assessment team to gather data on item performance. For details of the pilot study, refer to Section 3.3.

Finalization of the Master Version

Once the final set of items was selected, a master version of the questionnaire was created. This version underwent a final review by the PARAKH team to identify any remaining content or typographical errors. Once an item was approved in this phase, it was locked as the "master version" and prepared for translation.

To ensure the questionnaires met the highest standards of quality and policy relevance, reviews were conducted by a group of steering committee members from key stakeholders. These reviews helped validate the appropriateness and alignment of the questionnaire with national education priorities. Furthermore, based on their feedback, necessary revisions were made to refine item clarity, relevance, and alignment with policy objectives.

Pupil Questionnaire (PQ): The PQ comprised 47 multiple-choice questions (118 including sub-parts) for students in Grades 3, 6, and 9, with 11 (28 with sub-parts) exclusive to Grade 9. There were also select questions for children with special needs (CWSN).

Teacher Questionnaire (TQ): The TQ included 28 multiple-choice questions (96 including sub-parts) administered to subject teachers of sampled students.

School Questionnaire (SQ): The SQ consisted of 36 multiple-choice questions (121 including sub-parts) administered to school principals or headmasters.

Translation of Questionnaires

Once the final version of the questionnaire was prepared in English, it was shared with States for translation. Special care was taken during the translation process to ensure that terms related to demographic and socio-cultural indicators were accurately and sensitively translated, preserving their intended meaning across diverse regional contexts. In total, the questionnaire was translated into 23 regional languages. The translated versions underwent a thorough review to ensure linguistic accuracy, cultural relevance, and consistency, especially for the sections covering background variables. These finalized multilingual instruments were then administered in the field, facilitating inclusive participation and ensuring that data collected was both linguistically and contextually representative of India's diverse educational landscape.

Final Review of Questionnaires

After the translation, questionnaires were assembled into survey-specific format and an additional quality assurance check was performed. This review focused on:

- Detecting and correcting any formatting, content, or typographical errors introduced during the test form assembly process
- Verifying the clarity and comprehensibility of statements, ensuring accessibility or understanding alike for all respondents

By following this multi-phase process, PARAKH Rashtriya Sarvekshan 2024 ensured that its context questionnaires provided reliable and meaningful data to support educational research and policymaking.

3.3 Pilot Study

The PARAKH Rashtriya Sarvekshan 2024 implemented a two-phase pilot study approach to gather essential insights for developing a set of instruments that adhere to the highest standards and align with the objectives outlined in the PARAKH Rashtriya Sarvekshan 2024 Assessment Framework document[1]. Phase 1 of the pilot was conducted in May 2024, followed by Phase 2 in August 2024.

The findings of the pilot analyses informed the development and assembly of the final assessment test forms for the main study. The pilot analyses facilitated:

a. Evaluating the basic quality of the pilot data collected: This includes examining test form distributions, response rates, item completion rates, and proportions of missing data.

b. Producing classical item analysis (IA) statistics such as item difficulty (proportion correct, *P*+), item response category distributions (distractors) and point biserial correlation, item-rest biserial correlations, and missing rates (omit).

c. Evaluating the extent to which item position (e.g., at the beginning or end of a test form) has an impact on item difficulty and/or missing rates.

d. Producing item parameters (item difficulty and discrimination), and root mean squared deviation (RMSD) statistics using the item response theory (IRT)-based two-parameter logistic model (2PLM).

e. Generating differential item functioning (DIF) statistics for key groups such as gender and region. It should be noted that analyzing DIF based on the language of the test was not feasible in the first pilot study, as it was conducted exclusively in English. In the second pilot study, data were collected for three language groups; however, the sample sizes for the non-English language groups were too small to perform a reliable statistical DIF analysis.

These five analyses are intended to provide multiple sources of evidence to:

I. select the final item pool for each subject and grade (Language and Mathematics for Grade 3, Language, Mathematics and The World Around Us for Grade 6, and Language, Mathematics, Science, and Social Science for Grade 9), and

II. support the assembly of test forms in a way that optimizes construct coverage and measurement accuracy.

3.3.1 Number of Items and Test forms for Pilot Analysis

For PARAKH Rashtriya Sarvekshan 2024, an overhead factor of two was used for piloting new items. This means that twice the number of items per subject were developed for piloting by subject-matter experts (SMEs) and teachers. A uniform distribution of competencies, as outlined in the PARAKH Rashtriya Sarvekshan 2024 framework, was sought across all subjects to ensure comprehensive coverage of the constructs. Finally, it is noted that all items were multiple-choice with four response options.

Grade 3

For the Grade 3 PARAKH Rashtriya Sarvekshan 2024 main survey, around 45 unique items were required for two subjects: Language and Mathematics. To accommodate an overhead factor of two, a total of 90 items for both the subjects were developed for piloting. After analysis, the best items for each subject were selected. This selection was based on content reviews, psychometric properties, and alignment with the Assessment Framework. These items were then used to assemble test forms for the main survey.

During the pilot phases, items were distributed as evenly as possible across competencies. The results of the two pilot phases informed final adjustments to the main survey test form designs. In the first phase, 60 unique items for each subject were piloted.

The second phase piloted the remaining 30 items for each subject. The first phase included eight test forms, whereas the second phase included four test forms. Each student in the pilot was assigned test forms covering both the subjects. Within each subject, a rotation design ensured that each item appeared in two different test forms and occupied two distinct positions within those test forms. This design enabled the study of

position effects, enhanced content coverage, and improved item linking across test forms, thereby strengthening the overall quality and robustness of the survey.

Grade 6

For the Grade 6 PARAKH Rashtriya Sarvekshan 2024 main survey, 45 unique items were required for Language, and 54 items for Mathematics and The World Around Us. To accommodate an overhead factor of two, a total of 90 items for Language and 108 items for Mathematics and The World Around Us were developed. After analysis, the best 45 items for Language and 54 items for Mathematics and The World Around Us were selected. This selection was based on content reviews, psychometric properties, and alignment with the Assessment Framework. These items were then used to assemble test forms for the main survey.

During the pilot phases, items were distributed as evenly as possible across competencies. The results of the two-pilot phase informed final adjustments to the main survey test form designs. In the first phase, 60 unique items for Language were piloted, while 72 items were piloted for Mathematics and The World Around Us. The second phase piloted the remaining 30 items for Language and 36 items for Mathematics and The World Around Us. The first phase included eight test forms, whereas the second phase included four test forms.

Each student in the pilot was assigned test forms covering all three subjects: Language, Mathematics, and The World Around Us. Within each subject, a rotation design ensured that each item appeared in two different test forms and occupied two distinct positions within those test forms. This design enabled the study of position effects, enhanced content coverage, and improved item linking across test forms, thereby strengthening the overall quality and robustness of the survey.

Table 3.1 provides an overview of the number of unique items and the total number of test forms used to distribute these items across both Phase 1 and Phase 2 of pilots for Grade 6.

Table 3.1: Number of items and test forms for Grade 6 piloting

Grade 6				
	No of unique items			No of test forms
	Language	Mathematics	The World Around Us	
First phase of pilot	60	72	72	8
Second phase of pilot	30	36	36	4
Total	90	108	108	12
Needed for Main Survey	45	54	54	6

For Language, sets of 5 questions per reading passage are to be maintained and so, learners attempted 15 items as compared to 18 items in Mathematics and The World Around Us.

Grade 9

For the Grade 9, 60 unique items were required for all four subjects- Language, Mathematics, Science and Social Science. To accommodate an overhead factor of two, a total of 120 items for the three subjects were developed for piloting. After analysis, the best 60 items for each subject were selected. This selection was based on content reviews, psychometric properties, and alignment with the Assessment Framework. These items were then used to assemble test forms for the main survey.

During the pilot phases, items were distributed as evenly as possible across competencies. The results of the two pilot phases informed final adjustments that were made to the main survey test form designs. In the first phase, 80 unique items for each subject were piloted. The second phase piloted the remaining 40 items for each subject. The first phase included eleven test forms, whereas the second phase included eight test forms. Each student in the pilot was assigned a test form covering three out of the four subjects: Language, Mathematics, Science, and Social Science. Within each subject, a rotation design ensured that each item appeared in multiple test forms and occupied distinct positions within those test forms. This design enabled the study of position effects, enhanced content coverage, and improved item linking across test forms, thereby strengthening the overall quality and robustness of the survey.

Table 3.2 provides an overview of the number of unique items and the total number of test forms used to distribute these items across both Phase 1 and Phase 2 of pilots for *Grade 9*.

Table 3.2: Number of items and test forms for Grade 9 piloting

Grade 9					
	No of unique items				No of test forms
	Language	Mathematics	Science	Social Science	
First phase of pilot	80	80	80	80	11
Second phase of pilot	40	40	40	40	8
Total	120	120	120	120	19
Needed for Main Survey	60	60	60	60	6

[1] https://ncert.nic.in/parakh/pdf/Assessment_Framework.pdf

3.3.2 Data Quality and Validation Process

The pilot data underwent rigorous quality checks and validation to ensure accuracy and consistency. In Phase 1, only cognitive data were collected, while Phase 2 included both cognitive and background questionnaire data. Responses in cognitive tests were classified as correct or incorrect, and data were analyzed based on various grouping variables.

Key quality checks involved verifying adherence to the test form design, detecting duplicate student IDs, and assessing test form distribution. Item responses were reviewed for validity, omissions, and not-reached items.

In the main survey, not-reached items will be treated as missing, whereas in the pilot analysis, they were marked incorrect. Scoring procedures were applied, using specific codes to distinguish between valid, invalid, and omitted responses.

The data validation process ensured accuracy across all Grades through:

- **OMR Cross-Verification:** Comparing Excel data with students' OMR sheets.
- **Error Checks:** Identifying multiple responses and inconsistencies.
- **Sequence Correction:** Adjusting non-sequential numbering of items.

Further data quality assessments included test form distribution verification, response rate analysis by demographic variables, and item completion rate evaluations. Questionnaire data from Phase 2 were reviewed for missing values and response patterns to aid in developing the codebook and indices for the main study.

3.3.3 Data Quality Checks and Treatment

The pilot study underwent thorough data quality checks to ensure accuracy and consistency. Phase 1 collected only cognitive data, while Phase 2 included both cognitive and background-questionnaire data. Validation steps involved verifying test form design adherence, identifying duplicate student IDs, and assessing response distributions, including valid, invalid, omitted, and not-reached items. Not-reached items were treated as incorrect in the pilot but were considered as missing in the main survey.

The data validation process included cross-verification of Excel data with OMR sheets, identifying errors such as multiple responses, correcting non-sequential numbering, and analyzing response rates by demographic variables. Item completion rates were also assessed to ensure data integrity.

To clean the data, excess responses beyond test form limits were removed. Non-serious responses, such as blank or test forms with fewer than five items answered, were deleted. Duplicate entries were identified and eliminated across both phases.

3.3.4 Classical Item Analysis

Item analysis (IA) based on Classical Test Theory (CTT) was conducted for both pilot phases across cognitive measures, including Language and Mathematics for Grade 3, Language, Mathematics, and The World Around Us for Grade 6, and Language, Mathematics, Science, and Social Science for Grade 9. The analysis aimed to identify high-quality items, those with appropriate measurement characteristics, those that needed revisions, and those that were not considered suitable for the main study.

Key metrics analyzed included item difficulty (P+), item-total biserial correlation, item-response-category proportions, item-response-category biserial correlation, and proportions of missing responses (invalid, omitted, and not reached). Additionally, IA criteria based on PISA (OECD, PISA 2022 Technical Report, Chapter

11) were applied to flag poorly functioning items. These flags streamlined the review process, ensuring that only high-quality items meeting consistent psychometric criteria were selected for the main study.

Table 3.3. IA flagging criteria

IA Statistic	Criteria for flagging items
Item-total biserial correlation	0.3
Distractor-total biserial correlation	≥ item-total biserial
Minimum P+	0.2
Maximum P+	0.9
Maximum percentage omitted responses	10%
Maximum percentage not-reached responses	10%

After analyzing both phases of the pilot using the IA flagging criteria outlined in Table 3.3, the items were further classified using Table 3.4 below.

Table 3.4. IA pBis flagging cut-offs

pBis range	Color coding	Recommendation on item quality
Less than 0.15	Red	Poor
Between 0.15-0.25	Yellow	Need review
Between 0.25-0.3	Green	Good
Greater than 0.3	Blue	Good (as PISA cutoff)

Items coded in red, based on the established cut-offs, were excluded from the main study. Items coded in yellow could be considered for inclusion, provided they pass a comprehensive review by subject-matter experts (SMEs). Items coded in blue and green were included without requiring additional SMEs evaluation.

3.3.5 Item Performance Across Test forms

In the pilot test design, items are presented in two or three distinct positions across test forms. For most items, performance is generally similar across the different positions. Good performance indicates a consistent result, while poor performance probably indicates a genuine issue with the item itself. However, some items performed well in one or two test forms but not in the others. To address this, the test forms were carefully reviewed to rule out errors such as incorrect item placement or other printing issues. If no such issues were found, the items underwent a detailed review by SMEs before being considered for inclusion in the main survey.

3.3.6 Item Position Effects and Speediness

To assess potential item position effects and speediness, which may lead to reduced student engagement or fatigue toward the end of a test, each piloted item was presented at least twice in different positions across test forms to mitigate these effects.

Item position effects were analyzed by comparing item difficulty and missing responses across different placements. The analysis assessed whether performance differences were more pronounced for difficult items and whether fatigue or speediness led to more omissions or not-reached items.

Findings from both pilot phases showed no significant concerns regarding item position effects or test speediness. The insights informed the final test design, ensuring balanced item placement and minimizing biases for fair and accurate assessment across all grades and subjects.

3.3.7 Item analysis with Item Response Theory

Unidimensional 2PL model IRT calibrations are carried out separately for each of the cognitive assessments (Language and Mathematics for Grade 3, Language, Mathematics and The World Around Us for Grade 6, and Language, Mathematics, Science, and Social Science for Grade 9). For more background on IRT, see, for example, the texts by de Ayala (2013) and Livingston (2020).

To enhance the accuracy of the analysis, IRT models are utilized after non-performing items have been removed. These items were excluded as they introduced noise into the dataset, potentially affecting the model's performance and results. The number of non-functioning items in both phases of the pilots based on the CTT analysis are mentioned in Table 3.5 and 3.6.

Table 3.5: Number of non-functioning items in the phase 1 of pilot

Grade	Subject				
	Language	Mathematics	The World Around Us	Science	Social Science
3	0 out of 60	14 out of 60	-	-	-
6	0 out of 60	19 out of 72	15 out of 72	-	-
9	0 out of 80	28 out of 80	-	30 out of 80	23 out of 80

Table 3.6: Number of non-functioning items in the phase 2 of pilot

Grade	Subject				
	Language	Mathematics	The World Around Us	Science	Social Science
3	0 out of 30	1 out of 30	-	-	-
6	2 out of 30	4 out of 36	2 out of 36	-	-
9	7 out of 40	6 out of 40	-	21 out of 40	20 out of 40

Each calibration run is carefully reviewed to ensure appropriate convergence of the calibration procedure and proper overall model-data fit. The item parameters and the item fit statistics produced were reviewed and poorly functioning items identified. To the extent possible, the estimated item difficulty is used to manage and balance the test forms difficulty for the main study.

3.3.8 Test Reliability

To check the overall reliability of each cognitive tests, EAP reliability (Kim, 2012) was produced for both the pilots and presented in Table 3.7 and 3.8.

Table 3.7: IRT reliability of each cognitive assessment in the first phase of pilot

	EAP reliability				
Grade	Language	Mathematics	The World Around Us	Science	Social Science
3	0.83	0.70	-	-	-
6	0.81	0.72	0.75	-	-
9	0.82	0.66	-	0.62	0.69

Table 3.8: IRT reliability of each cognitive assessment in the second phase of pilot

	EAP reliability				
Grade	Language	Mathematics	The World Around Us	Science	Social Science
3	0.82	0.78	-	-	-
6	0.73	0.72	0.77	-	-
9	0.79	0.73	-	0.52	0.60

3.3.9 IRT Item Parameters and DIF Analysis

Item difficulty, discrimination, and RMSD values were analyzed under the 2PL model, with items flagged if difficulty values fell outside -4 to +4 or if discrimination values were below 0.10. No items were identified as problematic based on these criteria. Differential Item Functioning (DIF) analysis ensured comparability across subgroups (e.g., gender, area), with items showing RMSD values above 0.15 flagged and excluded from the main survey.

3.3.10 Selection of Items for the Main Survey

To ensure the selection of high-quality and well-functioning items, data from classical item analysis, item position effects, speediness, IRT scaling, and DIF analysis were consolidated. Comprehensive tables and figures were prepared to guide expert reviews, facilitating the efficient identification of items for revision or removal. The test form assembly process, detailed in Section 3.5, ensured a balanced distribution of competencies and difficulty levels, with a minimum of four items per competency per grade.

3.4. Test form Design

3.4.1 Test form Design for Grade 3

For PARAKH Rashtriya Sarvekshan 2024 Grade 3, the main survey design consists of six test forms where each student takes both the subjects: Language and Mathematics. Furthermore, each subject follows a design such that each item appears in two test forms and in two different positions. These features mitigate position effects, ensure broader content coverage, and strengthen linking between test forms.

3.4.2 Test Form Design for Grade 6

PARAKH Rashtriya Sarvekshan 2024 Grade 6 consists of six test forms where each student takes all three subjects: Language, Mathematics and The World Around Us. Again, each subject follows a specific test design, so that each item appears in two test forms, and each subject appears twice in each position.

3.4.3 Test Form Design for Grade 9

For Grade 9, PARAKH Rashtriya Sarvekshan 2024 design consisted of eight Test Forms. The goal was to let each student take three out of the four subjects: Language, Mathematics, Science, and Social Science. Also, each item is to appear in two test forms and each of the four subjects is to appear twice in each of three positions in the test forms.

3.5. Test Form Assembly Process for PARAKH Rashtriya Sarvekshan 2024 Main Study

The test form assembly for the PARAKH Rashtriya Sarvekshan 2024 Main Study follows a structured approach to ensure balanced, fair, and psychometrically sound assessments across all three Grades. Multiple test forms are used per Grade to minimize item exposure and maintain content representativeness. Subject sections within test forms adhere to a predefined design.

A computational approach using Mixed Integer Linear Programming (MILP) and an automated process in R is employed to assemble test forms. The process includes:

1. **Files Preparation**
    - Item mapping based on predefined competencies are prepared.
    - Item information is extracted from the analysis of data from the two PARAKH Rashtriya Sarvekshan pilot studies.
    - Key statistics, including item difficulty and discrimination, are calculated and utilized for test assembly.
    - Constraints are implemented in R to ensure that common items do not appear in conflicting Test Form pairs.

2. **Constraints Implemented in the Code**

- Test Length – Each test form includes a fixed number of items as per the test design.
- Competency Distribution – Ensures equal representation of competencies across Test Forms.
- Difficulty Level Balance – Maintained using the 2PL IRT model.
- Item Exposure Control – Regulates the frequency of item appearances in accordance with the test design.
- Answer Key Distribution – Ensures an even spread of correct answers across options (A, B, C, and D) to minimize bias.

3. Optimization and Validation

- Optimization- MILP-based optimization ensures item allocation adheres to all constraints.
- Validation Steps
    - Overlap and D-efficiency analysis to assess test form quality.
    - Constraint checks to ensure all test design requirements are met.
    - Evaluation of Test Information Function (TIF) and Test Characteristic Curve (TCC) for reliability.
- Final Adjustments- Corrections are applied if any constraints are violated.

Test form designs are stored in an Excel workbook for test forms creation. The PARAKH Rashtriya Sarvekshan 2024 test form assembly followed this computational approach to ensure balanced, fair, and statistically sound assessments across Grade 3, Grade 6, and Grade 9. This systematic method ensures that each student receives a comparable yet unique test form, preserving the integrity and validity of the PARAKH Rashtriya Sarvekshan 2024 assessment.

Chapter 4: Sampling Design and Procedures

4.1 Introduction

The PARAKH Rashtriya Sarvekshan 2024 is a nationally representative large-scale survey of students' learning in India administered periodically in key grades and subjects of primary and secondary education. Sampling design and procedures play a crucial role in ensuring that the results obtained on a sample can be reliably applied to the entire population.

Sampling design for the PARAKH Rashtriya Sarvekshan 2024 intends to support the predefined and agreed ***objectives*** of the national assessment. PARAKH Rashtriya Sarvekshan 2024 intends to provide information of what India's students know and can do in key grades and subjects at ***National***, ***State***, ***District***, and ***school type*** administrative levels, as schematically depicted in Figure 1.

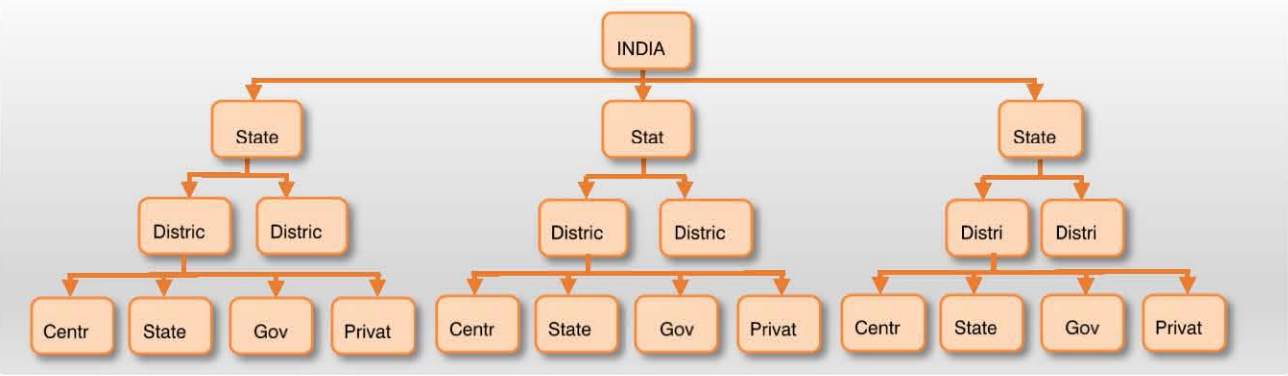

Figure 1 : Hierarchical structure of the PARAKH Rashtriya Sarvekshan 2024 sample strata

Sampling plan for PARAKH Rashtriya Sarvekshan 2024 is designed to enable reporting of student academic performance at each of the hierarchically organized administrative levels, as presented in Figure 1, in Mathematics (Grade 3, 6, and 9), Language (Grade 3, 6, and 9), World Around Us (Grade 6), Science (Grade 9), Social Science (Grade 9). Thus, PARAKH Rashtriya Sarvekshan 2024 is inform about student achievement in these key subjects and grades at overall India national level, how do they perform in each of the states, and what is their achievement within each of the districts. Lastly, within each district, student achievement will be reported for each of the school administration types (State Government, Government Aided, Private, and Central Government). To achieve these objectives, there are several questions that the sampling design will address:

1. What is the minimum sample size needed to obtain reliable information of student performance in the groups at the lowest stratum level – school types within districts?
2. What are the resultant sample sizes at district, state, and national level?
3. What methods will be used for selection of schools within each school type and for selection of students within schools?

The following sections present the rationale for the sampling design and the factors relevant to addressing these questions.

4.2 Logic of Sampling

In a typical large-scale survey, data are obtained on a sample of students drawn from the population. Considering that the results based on sample data can be generalized to the population only under certain conditions, it is important to identify required characteristics of the sample that enable attribution of the statistical information obtained on a sample of students from a certain group to all the students in that group.

The relationship between sample and population is based on a statistical probability, which means that descriptions and inferences about the characteristics of the student population based on a sample data are never fully accurate, they are made only to some degree of certainty. It is just a matter of statistical conventions to determine what is considered a sufficient ***degree of certainty*** at which we should accept that the characteristic observed on a sample can be applied to the population. This convention is commonly called "statistical significance".

Thus, the focal points of sampling are the factors associated with this degree of certainty and how do we ensure that a sufficient level of certainty will be reached?

The answers are derived from the theorems of normal distribution and the concept of "standard error" that is associated with every statistical indicator derived from sample data. The size of standard error is proportionate to the variability of measured phenomenon and inversely related to the sample size. Thus, with increase of sample size the standard error decreases, which further leads to the main sampling question – ***how large should be sample size*** so that standard error becomes sufficiently small to enable the ***desired level of certainty*** in making conclusions about student performance in the population? The answer to this question is dependent on two categories of factors:

a) Statistical conventions and deliberations that we accept to abide.

b) Objectives of the assessment, i.e., what information do we intend to derive from data.

4.3 Statistical conventions and deliberations

The main statistical conventions and deliberations that need to be defined and agreed upon when deciding about sample size include:

1. **Statistical significance:** Defines the probability at which we decide that results observed on a sample can be generalized to the population. This probability can be interpreted as the level of risk associated with accepting the hypothesis that the statistical information derived from a sample can be generalized to the population. This probability is also called Type I error, and it is conveniently set to 0.05 (symbolized as alpha), which means that we accept a risk up to 5% that we are wrong when rejecting a hypothesis of chance, and generalizing the effect observed on a sample to the entire population.

2. **Statistical power:** Defines the probability at which we can decide that "no-effect" observed on sample can be generalized to the population. The complement of power (1 – power) is also called Type II error and it is typically set to 0.20 (symbolized as beta), which means we take a risk of up to 20% that we are wrong when stating there is "no-effect" and generalizing this finding to the population.

3. **Minimum detectable difference:** Size of the difference that we can detect based on data collected from our sample. This difference may refer to either the difference between a sample statistic and a population parameter (e.g., average student performance), or the difference between two or more groups of students (e.g., males vs. females). Minimum detectable difference (MDD) can be standardized, i.e., expressed as a fraction of standard deviation, in which case the value is called minimum detectable effect size (MDES=MDD/s). Defining a desired MDES affects the sample size estimation because larger samples are needed for detection of smaller differences. The MDES for the PARAKH Rashtriya Sarvekshan 2024 sampling is set to be 0.30, which means that the sample size needs to be sufficiently large to detect a difference of the size equal to 30% of standard deviation.

4. **Cluster sampling method:** In educational research sampling units (students) are grouped in clusters (schools). Since the utilization of simple random sampling (SRS) would be associated with logistic challenges, it is common practice to use a cluster sampling (CS) method. In CS we first select a sample of clusters (schools) and then a sample of students within each school. Since the schools share common contextual factors, there is a certain degree of similarity or uniformity of student performance within schools. Consequently, increasing the number of students within schools does not bring much of new information, which requires a larger sample size compared to simple random sampling method. Thus, depending on the level of uniformity of students within schools, the estimation of sample size should be increased by an inflation factor called design effect (DEFF). This adjustment is based on the level of similarity between the members within clusters, technically called intraclass correlation (ICC), which is calculated from existing data collected by similar instruments in similar conditions. For the purpose of PARAKH Rashtriya Sarvekshan 2024 sample size estimation, the ICCs and corresponding DEFFs were calculated from the NAS 2021 data. Objectives of the assessment.

   In addition to statistical conventions and deliberations, sample size is also informed by objectives and nature of the assessment information that is intended to be derived from data, i.e., formulation on research questions, stratification decisions, etc. For PARAKH Rashtriya Sarvekshan 2024, the main objectives that inform determination of sample size tentatively include:

- Measure student achievement at national level
  - Overall national
  - By gender
  - By urbanicity
  - By social group
  - By school management

- Measure student achievement at each state level
  - Overall state
  - By gender within state
  - By urbanicity within state
  - By social group within state
  - By school management within state
- Measure student achievement at each district level
  - Overall district
  - By gender within district
  - By urbanicity within district
  - By social group within district
  - By school management within district

When research questions require deep disaggregation of the sample down to the district level, and moreover, within districts into breakout groups (e.g., school management), then several key questions need to be considered as they will substantially affect the sample size at all levels:

A. What is the minimum size of the group that can be meaningfully reported with a reasonable level of precision? Examples: estimating average district performance score, estimating how this score relates to some standard (performance level cut score, or national average) or any other fixed value. This requires sample size estimation method for one group vs. population (or fixed value).

B. What are the minimum sizes of the groups that can be compared at a reasonable level of power? Examples: comparisons between girls and boys, urban and rural students, students from different social groups, or students from different school management). This requires a sample size estimation method for two independent groups.

Method A: one group vs. population comparison

The estimation of sample size based on method A (one group vs. population or fixed value) relies on evaluation of standard error of the mean and associated confidence intervals based on central limit theorem and sampling distribution of the sample mean. In the case of one group, there is one standard error as the other value being compared is fixed (for example cut score) or associated with negligible error (group population mean, national mean).

A common formula for estimation of sample size for SRS in the case of one group vs population is derived from the expression for Confidence Interval:

$$n = 4\left(Z_{1-\frac{\alpha}{2}}\right)^2 \frac{s^2}{(2\ MDESs)^2} \quad \text{which simplifies into} n = \left(Z_{1-\frac{\alpha}{2}}\right)^2 \frac{1}{MDES^2}$$

Method B: two groups comparison

Commonly used formula takes the following inputs: Type I and II error rates, variance, minimum detectable difference, and the relative sizes of the compared groups (most commonly they are treated of being equal). Total sample size for both groups is estimated by the following expression:

$$N = \left(\frac{1}{q_1} + \frac{1}{q_2}\right)\left(z_{1-\beta} + z_{1-\frac{\alpha}{2}}\right)^2 \frac{1}{MDES^2}$$

Where q_1 and q_2 are proportions of cases in group 1 and group 2 (typically 0.5 for both if the groups are of the same size). Then, a sample size for each group equals:

$$n_1 = q_1 N \text{ and } n_2 = q_2 N$$

It is important to consider this formula for PARAKH Rashtriya Sarvekshan 2024 in situations where two compared groups are of unequal size, for example by school management, government and government aided school groups may be of substantially different size if proportionate sampling is used. The alternative is to use non-proportionate approach (which in the stage of data analysis needs to be compensated by sampling weights) and to set the groups to equal size.

Adjustments of sample size

a) Based on size of finite population

Further adjustments of sample size can be done in case the size of finite population is known. This adjustment does not have effect for larger populations, but for smaller populations the estimated sample size will be progressively decreased. The following formula can be used for adjustment based on the known finite population size:

$$n_{adj} = \text{N*n / (N + n – 1)}$$

where n_{adj} is adjusted sample size, n is original sample size, and N is size of finite population.

For example, if the original sample is estimated to be 500, for the finite population size of 5000 the adjusted sample size will be 455, and for the finite population size of1000 it will be adjusted to 334. This adjustment for finite populations for PARAKH Rashtriya Sarvekshan 2024 will be made at the district level for the samples of students in schools by administration types.

b) Based on design effect

The rationale for adjustment by DEFF is described earlier in this document and is normally used in practice whenever cluster sampling method is applied. DEFF is typically calculated from similar data administered in similar conditions. Researchers are cautioned to be careful in making decisions about the size of DEFF as it is not certain to which degree are old data alike the new data to be collected.

NCERT has analyzed NAS 2021 data and provided ICCs based on NAS 2021 data at the District/State level along with the standard error, for Grade 3, 5, 8 and 10. In absence of the pilot

survey for PARAKH Rashtriya Sarvekshan 2024, the data shared by NCERT was applied for arriving the DEF for Grade 3, 6 and 9.

c) Based on assessment design

Based on the assessment design and the principle that every sampled student will be tested in all subjects for Grade 3 & Grade 6 and for three subjects for Grade 9; the calculation of sample sizes needs to take into consideration. Based on the total number of subjects in each grade and the fact that each student takes all or some subject tests, it is relatively easy to determine adjustment factors for sample sizes at each grade. In grades 3 and 6 there are 3 tests in total, and considering that each student takes all three subjects, the adjustment factor is 3/3 = 1; i.e., no additional samples are required to be chosen for the correct representation however in grade 9 there are 4 tests, and considering that each student takes tests in three subjects , so the adjustment factors is 4/3 = 1.33.

d) Based on non-response rate

The adjustment of sample size based on the non-response rate compensates for the anticipated absenteeism of students, natural calamity, change in medium of Instruction, school closure etc., based on previous experience with similar assessments. For PARAKH Rashtriya Sarvekshan 2024 while determining minimum sample size additional 10% sample was selected as the selected Grades such as 6 and 9 are leading to change inn school (as large number of schools are Grade 1 to Grade 5 and Grade 1 to Grade 8) and actual transition of the selected schools is unknown. Further, the sample was selected from UDISE+ 2023-24 and test administered in 2024-25, to compensate non-response rates, 10% additional sample is justified.

5.4 Determination of sample size for PARAKH Rashtriya Sarvekshan 2024

Step 1: Finalize coverage of Schools and structure of Sampling Frame:

Frame (all Grades): UDISE+ 2023-24

Target population: Students of Grade 3, 6 and 9 of all recognized schools

Mediums of instructions under coverage for each Class: 23 (Assamese, Bengali, Gujarati, Hindi, Kannada, Konkani, Malayalam, Manipuri, Marathi, Nepali, Oriya, Punjabi, Sanskrit, Sindhi, Tamil, Telugu, Urdu, Bodo, Santali, English, Mizo, Garo, and Khasi)

Exclusion of small schools for administrative convenience: If enrolment in a class is less than 6, school will be excluded for sample selection of that class.

Computation using UDISE+ 2023-24	Grade-3	Grade-6	Grade-9
Desired national target population for PARAKH Rashtriya Sarvekshan 2024	2,21,42,806	2,04,07,068	1,80,38,334
Exclusions:			
Small schools	8,06,394	1,87,732	29,025

(Enrolment less than 6 in grade 3/ 6/ 9)			
Enrolment in Mediums of Instructions not covered in PARAKH Rashtriya Sarvekshan 2024	3,624	2,477	1,302
Total Enrolment, who are excluded	8,10,018	1,90,209	30,327
% of excluded enrolment	3.66	0.93	0.17
Defined national target population	2,13,32,788	2,02,16,859	1,80,08,007

Sampling frame structure: Sampling frame will contain the following columns:

1. State Code
2. State Name
3. District Code
4. District Name
5. UDISE+ Code
6. School Name
7. Principal Name
8. School Contact Number
9. School Address
10. School Pin Code
11. Medium of Instruction
12. Grade (3,6,9)
13. Sample Size
14. Total Enrolment
15. Medium of Instruction (in which medium survey will be conducted)
16. Medium of Instruction Enrolment
17. School Management
18. School Location
19. School Category

Step 2: Define Strata

Determine explicit and implicit strata:

Explicit: School Management within districts

Implicit: Locality (urban/rural), medium of instruction

Make separate frame of each explicit stratum, i.e., broad type of school management: (school management codes as per UDISE+ Data Capture Format)

Frame 1: State Government Schools	School management 01, 02, 03, 06, 89, 90, 91 (01-Department of Education, 02 – Tribal Welfare Department, 03 – Local Body, 06 – Other State Government Managed, 89 – Minority Affairs Dept., 90 – Social Welfare Department, 91 – Ministry of Labour)
Frame 2: Central Government schools	School management 92 to 96 and 101 (92 – Kendriya Vidyalaya, 93 – Jawahar Navodaya Vidyalaya, 94 - Sainik school, 95 - Railway School, 96 - Central Tibetan School, 101 - Other Central Govt./PSU Schools)
Frame 3: Government Aided schools	School management 04 and 07 (04 – Government Aided, 07 – Partially Government Aided)
Frame 4: Private Unaided recognized schools	School management 05, 97 and 99 (05- Private Unaided Recognized, 97 – Recognized Madrasa and 99 - Madrasa Aided (Recognized))

The objective is to provide separate estimates of each of these types of schools at district level.

Step 3: Estimating target sample size per subject per grade (per subject test):

Finally, the minimum sample size estimated by using above mentioned assumptions was 345.

Step 4: Adjusting sample size from Step 3 for finite populations, apply when less than 10,000 students:

$$n_{adj} = \frac{(\mathbf{N} * \mathbf{n})}{(\mathbf{N} + \mathbf{n} - \mathbf{1})}$$

Examples:

1. If enrolment of Grade 3 of Government schools in a district is 5000, target sample size for mathematics of Grade 3 will be = 5000 * 345 / (5000 + 345 – 1) = 323

2. If enrolment of Grade 3 of Government schools in a district is 1000, target sample size for mathematics of Grade 3 will be = 1000 * 312 / (1000 + 345 – 1) = 232

Step 5: Adjusting target sample size per district per grade for frames 1 to 3 based on assessment design in which each student takes two subject tests (number of assessed subjects at grade divided by number subject tests taken by each student)

	Grade 3	Grade 6	Grade 9	Total
Multiplier based on assessment design	3/3 = 1	3/3=1	4/3=1.33	
Sample size per stratum after Step 4: Sample Size per Test * grade-wise multiplier	345	345	459	1,149

Note: these numbers will be different for small size strata when the adjustment in Step 4 is applied

Step 6: Selection of Schools within each Frame 1/3/4 (State Gov., Gov. Aided and Private): District-wise

NAS employs probability proportional to its size (PPS) systematic sampling method.

Selection is to be made independently for each Grade 3, 6, and 9

Descriptions below are for Grade 3 where sample size per stratum equals 345. Same steps will be followed independently for Grade 6, and Grade 9 (where sample size per stratum equals 345 and 459 students for Grade 9).

Sample size requirements:

A. Check the minimum student requirement for the specific grade for each district (for example 345). Thus, if the number of students in the district is less than or equal to 345 as per frame, all schools in the frame will be selected for survey.

B. **Consider that the maximum number of students to appear in test from a school is 30**. Therefore, compute maximum effective sample students from all schools, i.e., Minimum (grade enrolment, 30). If the sum of maximum effective sample student is less than or equal to 345, select all schools in the frame.

For the districts × Grade where enrolment is higher than those described in steps 6-A and 6-B above, sampling will be necessary.

Measure of Size (MOS): Total school enrolment in the target class will be considered as size measure (i.e., when we select schools for Grade 3, enrolment for Grade 3 as per UDISE+ 2023-24 will be considered as size measure, when we select schools for Grade 6, enrolment of Grade 6 as per UDISE+ 2023-24) will be considered as size measure and so on).

Step 6-C: (for districts not covered in Step 6-A or 6-B)

i. Determine total enrolment, E, for all schools in the sampling frame for each explicit stratum.

ii. Determine total number of schools, S, in the sampling frame for each explicit stratum.

iii. Calculate the average enrolment, AE, in the sampling frame for each explicit stratum as the total enrolment (E) divided by total number of schools (S) in the stratum AE=E/S.

iv. Identify the target number of sampled students, NST, which is sample size estimated in Step 5, to be selected in the sampling frame for each explicit stratum.

v. Determine the target number of sampled schools (NSC) that need to be selected to reach target number of students NSC= NST/AE. Note: limit AE to 30, thus if AE > 30 then AE = 30.

vi. Calculate the sampling interval (SI) for each stratum as total enrolment of students in stratum (E) divided by number of schools that need to be selected for the stratum (NSC). Thus, SI = E / NSC.

vii. Select certainty schools (schools with MOS > SI) as they have probability 1 and remove certainty schools from the frame for the stratum.

viii. Recompute SI by repeating the steps i - vi on the reduced sampling frame (removed certainty schools identified in step vii). Thus, E, S, AE, NST, NSC, and SI will be recalculated.

ix. Determine a random starting point (RSP) for the stratum. The RSP should be between 1 and SI for each stratum and should be regenerated for each stratum.

x. Sort schools in sampling frame in each explicit stratum by implicit stratification variables (locality and medium of instruction) and finally by the MOS within each implicit stratum.

xi. Calculate cumulative MOS, CMOS, in the sampling frame for each explicit stratum.

xii. Identify sampled schools using systematic probability proportional to size (PPS) method: The 1st selected school will be the one with CMOS greater than or equal to the RSP (or RSP + 0 x SI). The 2nd selected school is the one with CMOS greater than or equal to (RSP + 1 x SI), the 3rd selected school is the one with CF greater than or equal to (RSP + 2 x SI), etc., until the target number of sampled schools (NSC) is reached.

xiii. Create a dashboard that reports all the interim numbers (E, S, AE, NST, NSC, SI, RSP), as well as the number and percentage of sampled schools and students disaggregated by implicit strata and compare with corresponding percentages in the frame. This comparison informs about representativeness of the sample for the population.

Step 7: Selection for Frame 2 (Central Govt schools)

Note that total enrolment in Central Govt schools, as per UDISE+ 2023-24 is **4.94 lakhs**, which is only 0.82% of enrolments in schools under NAS coverage. Total such schools are **2156** at all-India level, spread over 782 districts.

i. If the number of schools in a district is 10 or less, all schools will be selected. All eligible Grades will be surveyed. For example, in most States, JNV starts from Grade 6. In those cases, Grade 6 and 9 of the JNV will be surveyed.

ii. If the number of schools is more than 10, 10 schools will be selected from the district by PPSWR, with total enrolment as the size measure. All eligible Grades will be surveyed.

Step 8: Selection of Section and Students in a selected school (All the frames)

i. In a selected school, if the enrolment in the target class is less than 30, all students will be selected for the test.

ii. If enrolment in target class is more than 30 and students are in a single Section, 30 students will be selected at random using linear systematics sampling based on class attendance register. The total number of students in the class should be divided by 30 to get the interval (m, rounded off to the nearest lower integer). Thus, every m^{th} student should be selected starting from the 1st student in the attendance register.

iii. If number of students are in multiple Section, the following stepwise procedure will be followed:

a) One section will first be selected at random. This can be done through draw method. Names of all grades can be written on small pieces of paper, folded alike, and mixed well. Then one piece will be drawn randomly and that would be the class where students will be assessed. The Teacher Questionnaire will be canvassed for this selected section only.

b) Up to 30 students from this selected Section will be selected for the test by linear systematics sampling as described above in step 8_ii.

c) Suppose the number of students on the date of examination in the Section selected at Step 8-iii-a is n2 (less than 30), one more Section will be selected at random.

d) 30 – n2 students will be selected by linear systematics sampling from the Section selected at Step 8-iii-c.

e) Step 8-iii-c and 8-iii-d will be continued till a total of 30 students are selected from this class in the selected school. This is to be done to minimize loss in the target number of sample students.

Step 9: Distribution of Test Forms to Students selected for the test (All the frames)

i. Suppose there are t types of test booklets for a class and each booklet has an equal number of questions for each subject. Then, the UDISE+ 2023-24 code of the school will be divided by t and the remainder will be calculated.

ii. If the remainder is 1, distribution of booklets in the school will start with booklet type 1, if the remainder is 2, distribution of booklets in the school will start with booklet type 2, and so on. If the remainder is 0, distribution of booklets in the school will start with booklet type t.

iii. Booklets will be packed in boxes in a spiralled fashion, which means in interchanging order, for example, in case of three booklets: b1, b2, b3, b1, b2, b3, … etc; in case of 4 booklets: b1, b2, b3, b4, b1, b2, b3, b4, … etc.

iv. Step 9 ii will ensure that the distribution of booklets are nearly equal at the frame/ district level.

Chapter 5: Administration Procedures

This chapter outlines the comprehensive administrative processes involved in implementing the PARAKH Rashtriya Sarvekshan 2024. It details the collaborative framework of functionaries, training model and survey execution methodology, along with the specific institutional responsibilities at every level and stage.

The multi-layered collaborative framework ensured both top-down planning and bottom-up implementation support.

The successful execution of PARAKH Rashtriya Sarvekshan 2024 was made possible through the coordinated efforts of a vast and well-structured network of educational stakeholders across the country. This collaborative framework brought together institutions and personnel operating at multiple levels: national, state, district, and school, each playing a distinct yet interconnected role. From policy formulation and planning at the central-level to on-the-ground implementation in thousands of schools, every layer of the system contributed to ensure the integrity and success of the survey process.

The figure below illustrates the institutional structure and the operational flow that enabled the effective administration of PARAKH Rashtriya Sarvekshan 2024.

Figure 2: Driving forces for PARAKH Rashtriya Sarvekshan 2024

1. Training workshops

To equip teams with the necessary skills and clarity, PARAKH implemented a cascading training model. Over 40 nationwide workshops were conducted for this purpose.

- State-Level Coordinators (SLCs) and District-Level Coordinators (DLCs) Training: These workshops provided training on tools, methodology, logistics and data protocols to SLCs and DLCs.
- Training of Field Investigators (FIs): The trained SLCs and DLCs cascaded their knowledge to FIs, ensuring efficient local-level execution.

This model ensured consistency in delivery and empowered local units with aligned understanding and practice.

Over 40 nationwide workshops adopted a cascading training model, ensuring consistent delivery from SLCs/DLCs to Field Investigators. This approach built capacity and standardized practices across all regions.

2. Hybrid Approach to Survey Administration

The administration procedures for PARAKH Rashtriya Sarvekshan 2024 integrated both traditional and modern assessment methodologies to ensure a robust and efficient implementation. While the assessments were conducted using conventional paper-based formats to ensure accessibility and familiarity for students and schools, these were complemented using Optical Mark Recognition (OMR) technology for capturing responses. The use of OMR enabled systematic and standardized processing of large volumes of data, reducing human error and enhancing data reliability. Together, this hybrid approach balanced practical field realities with technological efficiencies.

- Hybrid approach combined paper-based assessments with OMR technology, enhancing reliability and efficiency.
-It balanced accessibility in schools with modern data processing needs.

3. Survey Administration Flow

The implementation of PARAKH Rashtriya Sarvekshan 2024 followed a structured and phased approach. This section outlines the step-by-step progression of the survey from initial training activities to the final stages of data handling and processing.

1. **Training Phase**

   Training began with Master Trainers, led by SLCs and DLCs under PARAKH's guidance. These trainers prepared the Field Investigators (FIs) for school-level implementation.

2. **Material Preparation and Distribution**

   The Central Board of Secondary Education (CBSE) managed the printing and packaging of all assessment and survey materials. These materials were routed to the Resource Custody Centre/Custodian (RCC) in each district.

3. **Survey Material Handover**

   Observers appointed by CBSE for each sampled school collected the materials from the RCC, transported them to the designated sampled schools and handed them over to the Field Investigators (FIs) in the school.

4. **Test Administration**

   Field Investigators (FIs) were responsible for the actual test administration. Their responsibilities included sampling a section and students. When there was more than one section or more than 30 students, checking the seal of the packed survey tools, unpacking the test booklets, and OMR sheets of the assigned class and re-packing the survey materials after the test administration. The packed materials were then handed over to the Observer. Observers were responsible for test supervision and for completing all required pre-survey and post-survey documentation.

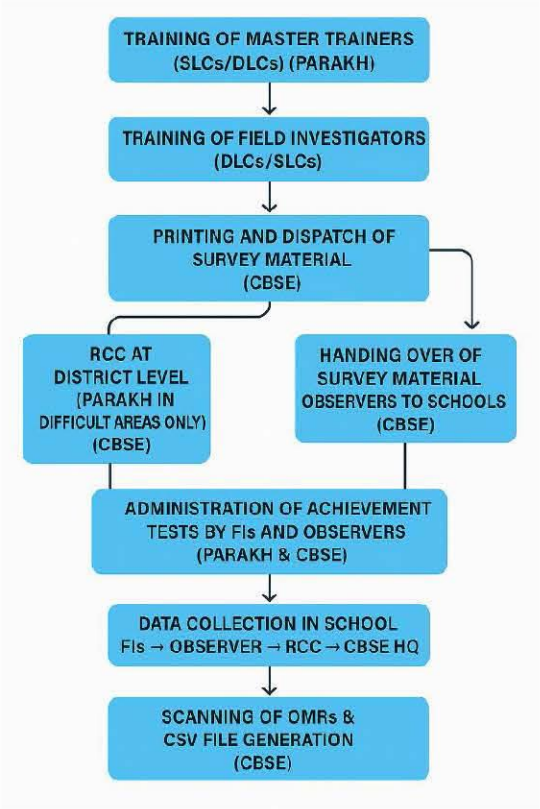

5. **Data Collection and Transfer**

   Post-assessment OMRs and supporting documents were securely transferred from FIs to Observers, to RCCs and finally to CBSE Headquarters.

6. **Scanning and Data Processing**

   CBSE conducted the scanning of OMR sheets and generated CSV files of the data for subsequent reporting and analysis.

The flowchart below shows the complete process from training of master trainers to scanning and data compilation, clearly mapping institutional roles and the workflow.

4. Roles and Responsibilities

Each institution and functionary was entrusted with specific roles to facilitate the smooth and effective implementation of PARAKH Rashtriya Sarvekshan 2024. This section presented an overview of the key responsibilities allocated across different levels: national, state, district, and school and the roles played by appointed experts and field-level personnel. The summary below outlined the structured coordination approach adopted for successful execution of the survey.

-Defined responsibilities across PARAKH, CBSE, SCERT/SIEs, Samagra Shiksha, DLCs, RCCs, Observers, FIs and Experts ensured smooth implementation.
-Clearly delineated roles minimized overlap and enhanced accountability.

4.1 Responsibilities of PARAKH

PARAKH, jointly led by the Ministry of Education, was responsible for national-level leadership of the PARAKH Rashtriya Sarvekshan 2024. Their roles included holding national consultations to finalize objectives, policies, design and developing the sampling framework and manuals. They coordinated with state-level institutions for developing the assessment framework, built capacity through training State-Level Master Trainers, appointed DLCs and the development of all survey tools. PARAKH also ensured linguistic translation of tests, conducted field trials, developed report templates, established a 24x5 Control Room and addressed all queries. Additionally, PARAKH team was responsible for the test monitoring and implementation planning.

4.2 Responsibilities of CBSE

CBSE functioned as the Test Administrator responsible for printing, logistics, and operational aspects of the survey. CBSE appointed and trained Regional Coordinators (RCs), DLCs, Observers, and Board Representatives, and ensured distribution and collection of materials. It arranged logistics, oversaw printing, sample-based planning, and material distribution. CBSE also appointed RCCs and ensured secure handling and scanning of OMRs. CBSE monitored test administration and ensured packaging and storage of materials as per protocols.

4.3 Responsibilities of STATES/UTs - SCERT/SIEs

SCERTs and SIEs were responsible for translating booklets and questionnaires, finalizing Master Trainers and DLCs, issuing implementation instructions, and supporting CBSE in areas with limited representation. They also finalized and trained Field Investigators (FIs) in collaboration with PARAKH and managed training logistics and coordination with relevant state stakeholders.

4.4. Responsibilities of STATES/UTs – Samagra Shiksha

Samagra Shiksha ensured timely release of funds and coordinated with SCERTs for training of DLCs. They supported state-level coordination and the smooth functioning of survey activities at the ground level.

4.5 Responsibilities of District-Level Coordinators (DLCs- PARAKH)

DLCs appointed by PARAKH supported CBSE in regions and ensured school-wise material distribution, confidentiality agreements and secure material handling. They supervised FI training, test administration, payment processing, expenditure reporting and checklist implementation.

4.6 Responsibilities of District-Level Coordinators (DLCs- CBSE)

DLCs-CBSE ensured local implementation of survey processes, acted as liaison among CBSE, RCs, Observers, Board Representatives, and DLCs-PARAKH. They conducted training, organized briefing sessions, distributed materials, supervised survey day operations, and ensured material collection and reporting.

4.7 Responsibilities of Resource Custody Centre/Custodian (RCC)

The RCC was responsible for storing, safeguarding, and distributing test materials. They maintained inventory and served as communication points between CBSE and district stakeholders. RCCs were chosen based on location suitability and security.

4.8 Responsibilities of Observers at School-Level

Observers appointed by CBSE monitored the school-level assessment process, ensured adherence to guidelines, supervised handling and collection of materials and acted as liaisons between the school, CBSE and field personnel. They reported challenges, ensured information security and facilitated communication.

4.9 Responsibilities of National-Level Observers

National-level observers were appointed by PARAKH to monitor activities across States/UTs. They provided real-time feedback, confirmed compliance with standards, acted as escalation points, and validated test administration reliability and fairness.

4.10 Responsibilities of Field Investigators

FIs administered the tests in schools and were preferably trainees from District Institutes of Education and Training (DIETs) or other qualified individuals, in the following order of preference:

- B.Ed./M.Ed. trainees from government colleges
- B.Ed./M.Ed. trainees from private Teacher Education Institutes (TEIs)
- Retired school teachers
- Postgraduate students
- Grade 11 students
- Trained teachers not currently working in schools

FIs coordinated with Observers, arrived at test centres early, verified seals, conducted section and student sampling, administered the tests, guided students on procedures, and ensured proper documentation. They also supported questionnaire completion, maintained field notes, and managed post-test packing, including the secure handling of OMRs and unused materials as per protocol.

The successful administration of PARAKH Rashtriya Sarvekshan 2024 was a result of well-structured planning, institutional synergy, and capacity building. The operational procedures summarized above reflected a comprehensive national framework implemented at scale with efficiency and precision.

For detailed, point-wise operational guidelines, refer to the official operational documents published on the PARAKH website.

(https://ncert.nic.in/parakh/pdf/OPERATIONAL_GUIDELINES2024.pdf).

PARAKH Rashtriya Sarvekshan 2024 Capacity Building Video Modules were also available on the PARAKH Rashtriya Sarvekshan 2024 page on the PARAKH website for additional reference and training support (https://ncert.nic.in/parakh/rashtriyasarvekshan.php).

Chapter 6: Scaling Methods

The scaling methods for PARAKH Rashtriya Sarvekshan 2024 were developed to provide the most accurate proficiency estimates, taking into account the complexity and efficiency of the main survey data collection. The survey was conducted using multiple forms across numerous states, languages, genders, areas, and school management subgroups for each class and subject.

This chapter details the scaling methods and procedures employed to model, scale and report the outcomes of the PARAKH Rashtriya Sarvekshan 2024. It begins by outlining the rationale for employing psychometric models to generate reliable estimates that are comparable across diverse states, districts, and subgroups. Subsequently, the specific item response theory (IRT) and population models utilized in the survey, as well as the multiple plausible values (PVs) estimation method, are described in detail.

6.1 Rationale

In PARAKH Rashtriya Sarvekshan 2024, an incomplete design was employed to assess the different subjects in which test forms, that each included only a subset of the items, were created using automated test assembly. Such designs are also referred to as matrix sampling designs or, in case of the assessment of multiple subjects, multiple matrix sampling designs (Frey et al., 2009; Rutkowski et al., 2014). Thus, each sampled PARAKH Rashtriya Sarvekshan 2024 student was administered a randomly selected test form among the alternative test forms assembled from the item pools developed to cover the full content domains.

Due to the limited sizes of the item pools and the extensive test assembly blueprints to be satisfied, some differences in form difficulty were unavoidable. Furthermore, because of the relatively low stakes of the assessment for students, missing data were expected. As a result, using the number of correct responses or percent-correct scores on individual forms—each consisting of different sets of items—is not an optimal or unbiased estimate of student proficiency, and cannot reliably support population or subgroup proficiency estimates.

The limitations of using percent-correct scoring for assessments based on incomplete test designs can be addressed by modeling item responses through item response theory (IRT) (van der Linden, 2018). When students respond to a set of items in a common subject or domain, their response patterns exhibit regularities that can be modeled based on underlying commonalities among the items. These regularities allow students and items to be characterized on a common scale, even when students respond to different sets of items.

However, IRT constitutes only the first step in scaling the data to describe distributions of student cognitive performance across populations, subpopulations, or subgroups. Since PARAKH Rashtriya Sarvekshan 2024 also aims to provide estimates of relationships between cognitive proficiency and background questionnaire information, **population modelling** (also referred to as **latent regression**) was employed as a second step. This approach builds on the IRT modelling to integrate both cognitive and background questionnaire data, providing the most accurate and unbiased estimates of such relationships (Mislevy, 1991; von Davier et al., 2006; OECD, 2024).

6.2 IRT scaling

The quality of PARAKH Rashtriya Sarvekshan 2024 IRT scaling relied on the linking of forms built in the test design, the choice of IRT modelling approach, and the use of item fit analyses to account for possible differential item functioning (DIF) related to key subgroups (i.e., language, gender, area, and school management). The IRT linking, modelling, and item fit methods, as well as the IRT scaling procedure implemented are described below.

Linking test forms with common items and applying the two-parameter logistic (2PL) model ensured that student proficiency and item difficulty were placed on a common scale, while accounting for differential item functioning (DIF) due to medium of instruction (i.e., language).

6.2.1 Linking

As indicated above, PARAKH Rashtriya Sarvekshan 2024 test forms include different sets of items. Therefore, it is critical that as many items as possible be shared (i.e., common) across forms for IRT to link all the forms together in order to ensure that each form's proficiency estimates are produced and reported on a common scale for each class and subject. Thus, PARAKH Rashtriya Sarvekshan 2024 test forms were assembled to optimize the *common items* shared across the multiple test forms. This approach, that is often used in large-scale assessment surveys (Mislevy, 1992; Mazzeo & von Davier, 2008), ensured that the student-level and the population-level proficiency estimates are comparable, regardless of the form used. The assembly process also ensured that items were included in two test forms in a balanced manner, so that any two test forms shared an equally large number of common items.

6.2.2 Modelling

There are two important considerations in the development and implementation of IRT scaling. First, it is necessary to determine whether the total population (i.e., the national population) can reasonably be treated as a single population or should be modelled as multiple populations. For PARAKH Rashtriya Sarvekshan 2024, it was important that results were reported at the state-level and it was expected that state's proficiency distributions would differ across states (some performing notably higher or lower than the national average and being more or less homogeneous in performance or background). Consequently, multi-group IRT modelling was implemented.

The second consideration concerns the mathematical formulation of the item model used to fit the data. For PARAKH Rashtriya Sarvekshan 2024, the two-parameter logistic (2PL) model, previously used in NAS 2017 and 2021, was selected as a parsimonious model that appropriately fits the data. In the 2PL model (Birnbaum, 1968), the probability of a correct response for item j is given by:

$$P(y_j = 1|\theta) = \frac{\exp[a_j(\theta - b_j)]}{1 + \exp[a_j(\theta - b_j)]},$$

where θ is the latent student proficiency, a_j is the item discrimination parameter, and b_j is the item difficulty parameter. A benefit of using this IRT model is that student proficiency and item difficulty

are on the same scale. Under an assumption of local independence,[2] the probability of a vector consisting of m item responses is given by:

$$P(\mathbf{y}|\theta) = \prod_{j=1}^{m} P(y_j|\theta),$$

where $P(y_j = 0|\theta) = 1 - P(y_j = 1|\theta)$.

To make the scaling procedure manageable and in line with operational procedures in other large-scale survey assessments, IRT scaling was conducted separately for each subject within each class. This means that two calibrations were performed for Grade 3 (Language and Mathematics), three for Grade 6 (Language, Mathematics, and World Around Us), and four for Grade 9 (Language, Mathematics, Science, and Social Science), leading to a total of nine calibrations. The 2PL calibrations were conducted using the open-source R TAM software package (Robitzsch et al., 2025), which has been widely used by researchers and countries for large-scale survey analyses, including those by OECD and NCES.

Using TAM, the parameters of the 2PL model were estimated by maximizing the marginal likelihood:

$$L(\mathbf{Y}) = \prod_{i=1}^{N} \int P(\mathbf{y}_i|\theta) f(\theta) d\theta\,,$$

where $f(\theta)$ is the standard normal density and $\mathbf{Y}$ is the vector of all student responses for a predefined group of students in the grade and subject of the calibration. A multigroup version of the 2PL model is obtained by allowing the mean and variance of θ to differ across predefined groups. In PARAKH Rashtriya Sarvekshan 2024 calibration, the groups were defined by language (i.e., medium of instruction).

The 2PL model is based on multiple key assumptions such as the mathematical form of the item probabilities, local independence, and uni-dimensionality.

6.2.3 Item fit

The root mean squared deviation (RMSD) fit statistic (Yamamoto et al., 2013; Joo et al., 2021; OECD, 2024) was selected to assess overall item model-data fit and item-by-group interactions (i.e., DIF or model-data fit for specific subgroups). RMSD measures the extent to which the model-based item characteristic curve (ICC) differs from the empirical ICC. It is computed as:

$$RMSD_g = \sqrt{\int \left[P_g^{obs}(\theta) - P_g^{exp}(\theta)\right]^2 f_g(\theta) d\theta},$$

where g = 1, ..., G is a country-by-language group; $P_g^{obs}(\theta)$ and $P_g^{exp}(\theta)$ are the observed and expected probability of a correct response given proficiency θ; and $f_g(\theta)$ is the group-specific density of student ability (Khorramdel, Shin, & von Davier, 2019; von Davier, 2005). The observed probability correct is based on the pseudo counts from the expectation-maximization (EM) algorithm that is used to estimate the model (Bock & Aitkin, 1981), while the expected probability correct is based on the estimated item parameters.

RMSD is sensitive to the differences in both item difficulty and item discrimination between the model-based ICC and the empirical ICC. This is illustrated in the figure below (fig 6.1), which shows a Grade 9 science item. The blue curve in the figure represents the national, common-item ICC based on data pooled from 20

2 In an IRT model, the assumption of local independence means that the item responses are independent conditional on proficiency, such that the item probabilities can be written as a simple product.

language groups. In contrast, the red, green, and purple curves represent group-specific ICCs for three subgroups flagged by the RMSD statistic. The red group-specific ICC shows a case where the differences from the common ICC are primarily due to item difficulty. The green and purple group-specific ICCs show two cases where differences are primarily due to item discrimination, reflected in flatter or steeper slopes relative to the national ICC. The RMSD statistic flagged these three specific cases because it takes the square root of the squared differences between ICCs across the range of scores, making it effective at identifying item misfit—difficulty- and discrimination-related.

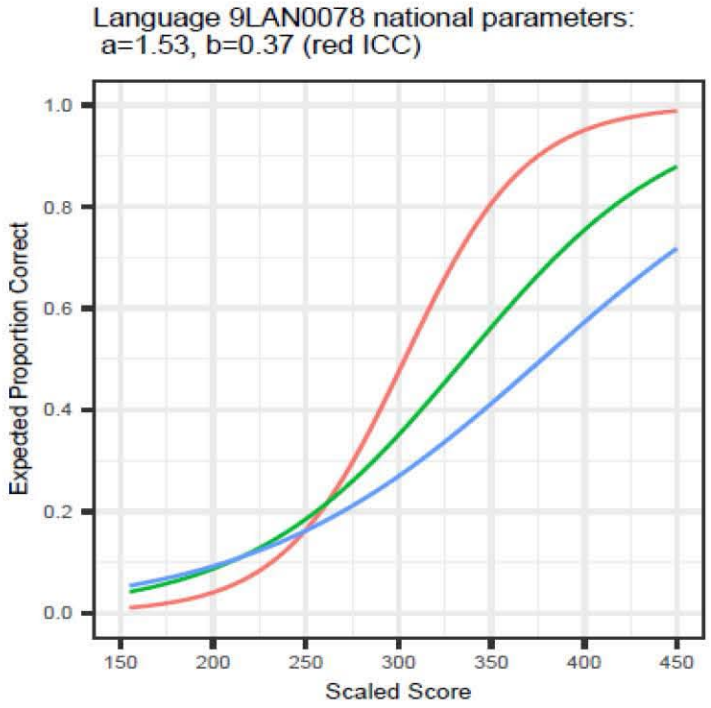

Figure 6.1. Plot showing the modelled ICCs for an item flagged by the RMSD fit statistic in two subgroups. The red curve shows the national (common) ICC based on data from 20 language groups, while the blue and green ICCs show the group-specific ICCs modelled for the two flagged groups.

6.2.4 IRT scaling procedure

Using TAM, the IRT scaling for each class and subject was conducted through three consecutive IRT calibration runs. To ensure that calibrations were properly setup and the best model parameters were estimated, the detailed TAM outputs from each calibration were thoroughly reviewed before the next run was conducted. This included checking for smooth model convergence through the Expectation-Maximization (EM) cycles, reasonable item parameter estimates and fit, and reasonable posterior distributions of the individual expected-a-posteriori (EAP) proficiency estimates for each group.

In the first IRT run, a multi-group IRT model was fitted with language (medium of instruction) as the grouping variable. In the default parameterization of TAM, the mean and standard deviation of the first (language) group were fixed to zero and one, respectively, to achieve model identification. For each item in each language, the RMSD between observed and expected item response functions was calculated (Yamamoto et al., 2013).

If the RMSD was larger than .15 and the number of responses larger than 200, then language-specific parameters were estimated for the item under scrutiny in the third IRT run. Subsequently, if the language-specific item parameters indicated a discrimination value smaller than 0.1, or a difficulty

value less than –6 or greater than 6, the item was deactivated for that language in the fourth and final run. To further assess model fit, differential item functioning (DIF) with respect to gender, area (urban/rural), and school management was examined using the RMSD statistic.

After the final calibration run, the item parameters were rescaled to prevent model identification issues in the conditioning models. These models were estimated at the state level rather than the language level, and therefore, after rescaling, they could be estimated without constraints related to model identification (e.g., without fixed intercepts).

6.3 Population modelling, conditioning, and plausible values

Once item parameters were calibrated, distributions of student proficiency were estimated through plausible values (PVs). PARAKH Rashtriya Sarvekshan 2024 utilized PVs, following the approach outlined by von Davier et al. (2009), for reporting results. While weighted maximum likelihood estimates (WLEs; Warm, 1989) were used to report the results for NAS 2021, PVs provide a more accurate distribution of student proficiency, proficiency levels, and relevant summary statistics such as means and standard deviations (e.g., Wu, 2005). In PARAKH Rashtriya Sarvekshan 2024, five sets of PVs were generated for each tested student.

- *Plausible values (PVs) were generated through latent regression, linking cognitive test responses with background questionnaire data.*
- *The Partial Least Squares (PLS) method, a novel data reduction technique that was applied on contextual variables, helped improve estimation accuracy and avoid overfitting.*
- *Five PVs per student were created, allowing for reliable group-level reporting (e.g., by state, gender, school type).*

PVs represent a plausible range of abilities that a student might reasonably possess, given their item responses and background variables, capturing the inherent uncertainty in the assessment process. An advantage of PVs is their suitability for group-level reporting and for relating proficiency to background variables. PVs, in combination with sampling weights, also facilitate accurate estimation of the standard errors of reported statistics such as means or proficiency levels for the nation, states and UTs, school districts, or gender groups.

Estimation of the PVs for PARAKH Rashtriya Sarvekshan 2024 consisted of two stages. In the first stage the IRT models were fit following the procedures summarized in previous section. In the second stage, student ability was estimated through a *latent regression model*, that linked both students' item responses and variables from the background questionnaires to the students' abilities. Using all background variables available for modelling in latent regression might have degraded the quality of the resulting PVs. Hence, following standard practice for LSAs, the background variables were transformed to a smaller set variable for modelling with the help of data-reduction techniques. PARAKH Rashtriya Sarvekshan 2024 used a novel method known as partial least squares (PLS) regression approach (Robitzsch et al., 2016) offering advantages over the more commonly used principal component analysis (PCA) approach in other large-scale surveys. PLS was conducted using the PLS package available in R (Mevik & Wehrens, 2007; Liland, Mevik & Wehrens 2025). The key difference between PLS and PCA is that PLS maximizes both the explained variance in

background variables and the explained variance in student proficiency. In the selection of the number of components for the latent regression model, the following rules were applied: 1) accounting for at least 95% of the maximum variance in estimated student proficiency (estimated by EAP from IRT scaling) explained by all the conditioning variables, for each subject, 2) while not accounting for more than 2/3 of the total variance in estimated student proficiency, and 3) the number of parameters of the latent regression model should be less than 10% of the sample. The first rule minimizes bias, the second rule prevents overfitting, and the third rule ensures estimation stability.

The latent regression IRT model can be estimated as follows. The latent regression of the multi-dimensional proficiency $\boldsymbol{\theta}$ (e.g., Language, Mathematics, and The World Around Us for Class VI) on the selected components $\mathbf{z}$ can be expressed as:

$$\boldsymbol{\theta}_i \sim N(\boldsymbol{\Gamma}'\mathbf{z}_i, \boldsymbol{\Sigma}),$$

where $\boldsymbol{\Gamma}$ is a matrix of regression parameters and $\boldsymbol{\Sigma}$ is the conditional covariance matrix.

This model can be estimated in TAM using the fixed item parameters for each subject obtained from the IRT scaling procedure. The latent regression parameter estimates are then used to determine the **posterior distribution of proficiency** for each student, from which plausible values are drawn (Wu, 2005; von Davier, Gonzalez, & Mislevy, 2009). This posterior distribution is given by:

$$h(\boldsymbol{\theta}_i|\mathbf{y}_i, \mathbf{z}_i) = \frac{P(\mathbf{y}_i|\boldsymbol{\theta}) f(\boldsymbol{\theta}|\mathbf{z}_i)}{\int P(\mathbf{y}_i|\boldsymbol{\theta}) f(\boldsymbol{\theta}|\mathbf{z}_i)},$$

where $P(\mathbf{y}_i|\boldsymbol{\theta})$ is the combined multidimensional (simple structure) 2PL model for the different subjects. For each student, five PVs are drawn from the above posterior.

To compute summary statistics, such as the population mean, it is essential to compute the statistic for each set of PVs. The estimate of the population statistic is then simply the average of the statistics computed for each set of PVs. For example, for the mean, it would be: $\hat{\mu} = K^{-1} \sum_{k=1}^{K} \hat{\mu}_k$, where K is the number of PVs which is 5 for PARAKH Rashtriya Sarvekshan 2024. The associated standard error can be found by calculating the sampling error variance and the imputation error variance. The imputation error variance for the mean is computed as: $Var_{imp}(\hat{\mu}) = \frac{1}{K-1} \sum_{k=1}^{K} (\hat{\mu}_k - \hat{\mu})^2$. The sampling error $Var_{samp}(\hat{\mu})$ can be estimated using a jackknife replicate weights procedure, considering within-school and between-school variation. The standard error of the mean is then found to be $SE(\hat{\mu}) = \sqrt{Var_{samp}(\hat{\mu}) + \left(1 + \frac{1}{K}\right) Var_{imp}(\hat{\mu})}$. The approach to obtain estimates for other statistics such as variances, percentiles, correlations, and regression parameters is the same.

6.4 Scale scores and item mapping

The IRT calibrations conducted using the TAM software placed item parameters on a continuous latent proficiency (theta or ϑ) scale with a mean of zero and a standard deviation of one in the first (language) group. However, when introducing a new assessment, it is standard practice to establish the IRT theta scale by standardising the PVs drawn from the latent regression model so that the weighted national mean and standard deviations are 0 and 1. This standardised theta scale was applied to the item parameters reported for PARAKH Rashtriya Sarvekshan 2024 as well as the reported theta scaled PVs. The advantage of using this IRT theta scaling approach is that it makes the IRT item and test characteristics easy to interpret — items with a b-parameter of 0 are average difficulty items and items with lower (higher) b-parameters are relatively easy (difficult) for the average student. However, students can receive both positive and negative theta-scaled PVs. Since it is generally undesirable to report negative scores, the standardised theta scale was transformed

following a similar approach as used in previous NAS cycles into a more interpretable and user-friendly reporting scale.

For each subject and class, the transformation of the theta latent proficiency scale (final theta PV scale obtained given the final IRT item parameters) into the PARAKH Rashtriya Sarvekshan 2024 reporting scale score S was computed using a linear transformation:

$$scale\ score\ S = B + A \times \theta$$

where B is such that a score of a student with a score of 300 is expected to answer approximately 50 percent of the items they were administered correctly and A is such that the difference between the scale score of a student who is expected to answer 60 percent of the items correctly and the scale score of a student who is expected to answer 40 percent of the items correctly is approximately 50 points.

The scaling parameters were chosen to aid the interpretation of the scale scores. Students scoring near 300 would be students expected to answer about 50 percent of the items in the item pool correctly. Students scoring above 300 are those expected to answer more than 50 percent of the items correctly and students scoring around 325 would likely answer roughly 10 or so percent more items correctly. Similarly for scores below 300 with 275 corresponding to roughly 10 or so percent fewer items correctly. These interpretative rules of thumb are coarse because the relationship between the scales and the percentage of items a student is expected to answer correctly is nonlinear depending on the overall difficulty of the items in the pool for each class and subject. However, scores near 300 was for students who could answer about half of the items correctly, scores over 350 was typically for students who could answer many of the items correctly, and scores below 250 was for students who could answer relatively few items correctly for every class and subject.

Chapter 9 describes the analyses conducted and the results obtained, including the values of the A and B transformation parameters applied to the theta PVs reported along with the PARAKH Rashtriya Sarvekshan 2024 scaled PVs reported in the PARAKH Rashtriya Sarvekshan 2024 grade by subject database. Chapter 10 describes the analyses conducted and the PARAKH Rashtriya Sarvekshan 2024 proficiency outcomes, including Mean, SD, and group difference statistics at the national, state and district levels overall and by key subgroup variables (gender, area, etc.).

Finally, it is important to note that a key advantage of using IRT in combination with scale scores is that items can be mapped onto the same scale as student proficiency. The response probability (RP) associated with a given probability of success can be linked to a specific scale-score value. For example, the RP50 of an item represents the scale score at which a student has 50% chance of correctly answering the item (i.e., the scale score value where $P(y_j = 1|\theta) = 0.50$). Given the reporting scale centered at approximately 300, an item with an RP50 of 300 indicates that about 50% of students answered the item correctly (assuming that the PV distribution is generally symmetrical). Other RP values commonly used include RP62 (used in PISA), RP67 (used in standard setting; see Chapter 11), and RP80. For example, the range from RP50 to RP80 (denoted as RP50-50) represents the scale-score range over which students' progress from having some chance of correctly answering the item to having a high probability of doing so. Note that this RP50-80 range captures both the difficulty level and discrimination power of the item. Combined with key percentiles of the PV distribution, this range can be used to evaluate how well the test items align with the proficiency distribution of students in the population.

In conclusion, this chapter has presented the scaling methods and procedures used to model, scale, and report the outcomes of the PARAKH Rashtriya Sarvekshan 2024. It emphasized the rationale for

applying psychometric models to produce reliable estimates that remain comparable across states, districts, and various subgroups. Additionally, it detailed the Item Response Theory (IRT) and population models adopted in the survey, along with the procedures for generating multiple plausible values (PVs). Together, these approaches ensure the robustness and comparability of the assessment results.

Chapter 7: Data Quality and Item Analysis

To ensure that the findings from the PARAKH Rashtriya Sarvekshan can meaningfully inform policy and support rigorous research, it was essential to analyse only high-quality data. Accordingly, a comprehensive data-quality review process was undertaken. Given the scale of the datasets and the complexity of the assessment design, several issues were found. Wherever feasible, these issues were systematically identified and resolved through appropriate data-cleaning procedures. In situations where problems could not be satisfactorily addressed, or where content or psychometric experts identified concerns about validity, the affected student- or item-level data were excluded from the final analysis database, keeping in mind the need to maintain data loss within accepted international standards. This process ensured that the results were based on reliable data.

In the following sections, we describe the data-quality procedures implemented and the quality of the resulting data used for the final PARAKH Rashtriya Sarvekshan 2024 analyses and reporting. Overall, student sampling, form assignment, and cognitive and background questionnaire data were found to be of high quality. Only a small number of items that did not function appropriately needed to have their data removed from the analysis database.

Three types of data quality analyses were conducted.

First, verification of the coding of all files received and the cleaning of inconsistent or invalid data were carried out.

Second, evaluations of the quality of students' responses across states, districts, and schools were conducted, focusing on:

- Student response rates and missing data to assess their level of engagement in the assessment as well as to verify that the assessment was not speeded
- Student response patterns to verify that the test was appropriately proctored and secure

• **National percent-correct distributions**, to provide an initial approximate assessment of performance and to supply information that would later be used as a basic check of the item response theory (IRT) and population models applied to produce accurate and unbiased population and subgroup estimates.

Third, classical item analysis (IA), preliminary item response theory (IRT) item calibration, and differential item functioning (DIF) analyses were conducted to evaluate item measurement characteristics and to flag items with poor or inconsistent functioning for review by test developers and subject-matter experts.

7.1 Coding Verifications, Data Cleaning, and Data Yield

Coding verification and data cleaning were conducted on all files used in the analysis and reporting of the PARAKH Rashtriya Sarvekshan 2024 main survey results.

7.1.1. Booklet and Item Information

The naming and coding of all variables and their values were reviewed to ensure that all files contained consistent information (e.g., identical item IDs, state codes and names) and that each datum fell within the expected range of values, with missing data coded appropriately. Relatively few issues were found, and these were resolved in consultation with the team.

7.1.2. Sampling

A few schools included in the sampling plan did not participate and were not replaced, and a small number of participating schools had substantially fewer students sampled than intended (10 to 30 students per school). Schools with fewer than five participating students were excluded. The exclusions were as follows:

- **Grade 3:** 143 schools removed (446 student observations excluded)
- **Grade 6:** 107 schools removed (353 student observations excluded)
- **Grade 9:** 60 schools removed (181 student observations excluded)
- Additionally, the removal of these schools led to the exclusion of 305 school questionnaire (SQ) responses and 905 teacher questionnaire (TQ) responses

In addition, Tamil Nadu's Villupuram district was unable to participate in PARAKH Rashtriya Sarvekshan 2024 due to flooding.

Although these deviations from the sampling plan were relatively small, they required the implementation of appropriate weighting measures to account for the missing district data. See Chapter 8 for detailed descriptions of the weighting measures implemented and the results obtained.

7.1.3. Verification of the Booklet Assignment

Students were assigned test booklets using a structured distribution process to ensure randomization. The percentage of students assigned to each booklet varied within districts and states. As indicated below and in Figure 7.1, the average and variability of the booklet assignment percentages observed by state and district aligned with the expectations of random assignment:

- **Grades 3 & 6:** On average, each of the 6 booklets are assigned to 16.67% of students, with some variation (15 to 20%) observed as expected due to the random assignment process and the sample sizes,
- **Grade 9:** On average, each of the 8 booklets are assigned to 12.5% of students, with some variation (10 to 15%) observed as expected with a random assignment process.

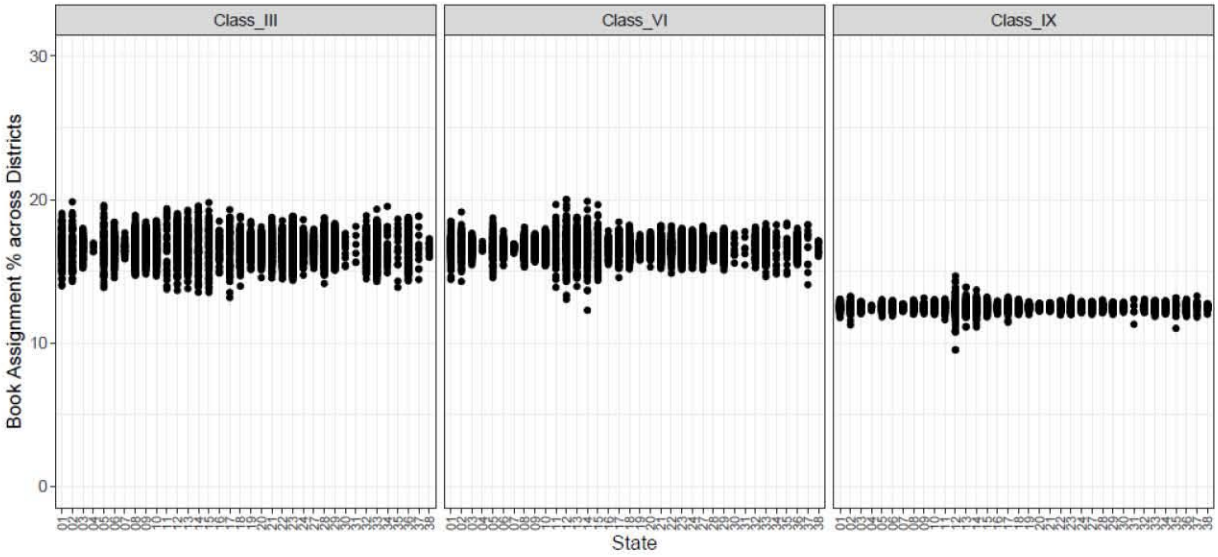

Figure 7.1 Book assignment percentages by state and district for each grade.

7.2 Student Cognitive Data

As indicated earlier, evaluations of the quality of the students' responses across states, districts and schools were conducted while focusing on:

- **Student response rates and missing data**, to assess students' level of engagement in the assessment and to verify that the assessment was not speeded
- **Student response patterns**, to verify that the test was appropriately proctored and secure
- **National percent-correct distributions**, to provide an initial assessment of performance and to supply information that will later be used as a basic check of the item response theory (IRT) and population models applied to produce accurate and unbiased population and subgroup estimates

Overall, the results presented in the next sections provide strong evidence that students actively participated in the assessment, yielding high quality data for the following steps of PARAKH Rashtriya Sarvekshan 2024 analysis and reporting.

7.2.1. Students' Response Rates and Response Patterns

Each student's response rate was computed as the percentage of items he or she responded to in the form he or she was assigned to, by subject.

Overall, students' response rates in PARAKH Rashtriya Sarvekshan 2024 were high, indicating a low percentage of non-responses. The findings detailed in Figure 7.2 shows that most students responded to 80% or more of the items in the test form assigned to them, indicating an appropriate level of engagement that is comparable to other large-scale assessments (OECD, 2024). For instance, we see in Figure 7.2, in **Grade 3 Language,** that the percentage of students who answered

80% or more of the language items was typically close to 90% across districts within and across states. A few outlier districts had lower response rates, with one district showing only 62% of students responding to 80% or more of the items.

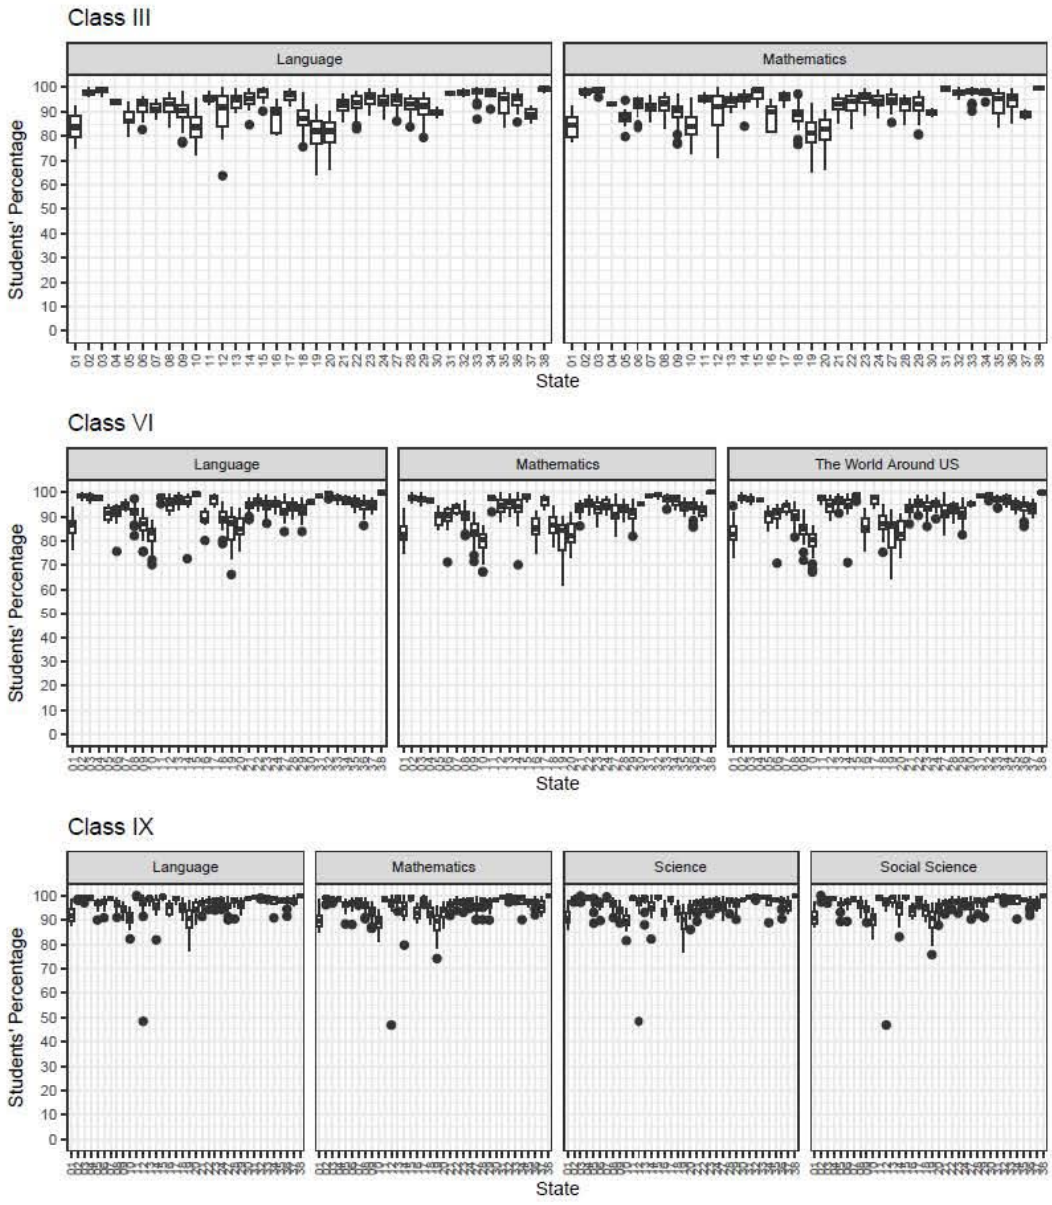

Figure 7.2. Percentages of students responding to 80% or more of the items in the forms assigned to them, by state and across districts, for each grade and subject.

The expectations that the assessment was appropriate (i.e., not speeded) and secure (i.e., that students did not copy answers from one another or were given answers to the items) were also evaluated. Figure 7.3 shows the percentage of missing responses by item position in the test form. While there is a slight increase in missing responses toward the end of the tests (position 45 in Grade 3, 50 in Grade 6, and 60 in Grade 9), the percentages remain low—less than 20% in Grades 3 and 6 and 15% in Grade 9.

Regarding test security, analyses of repeated score response patterns within school by state and district, the forensic analyses showed that when there were some repeated response patterns, they were consistent with expectations given the overall school performance (i.e., it is expected for students in overall very high or very low performing schools to have multiple instances of high or low response patterns).

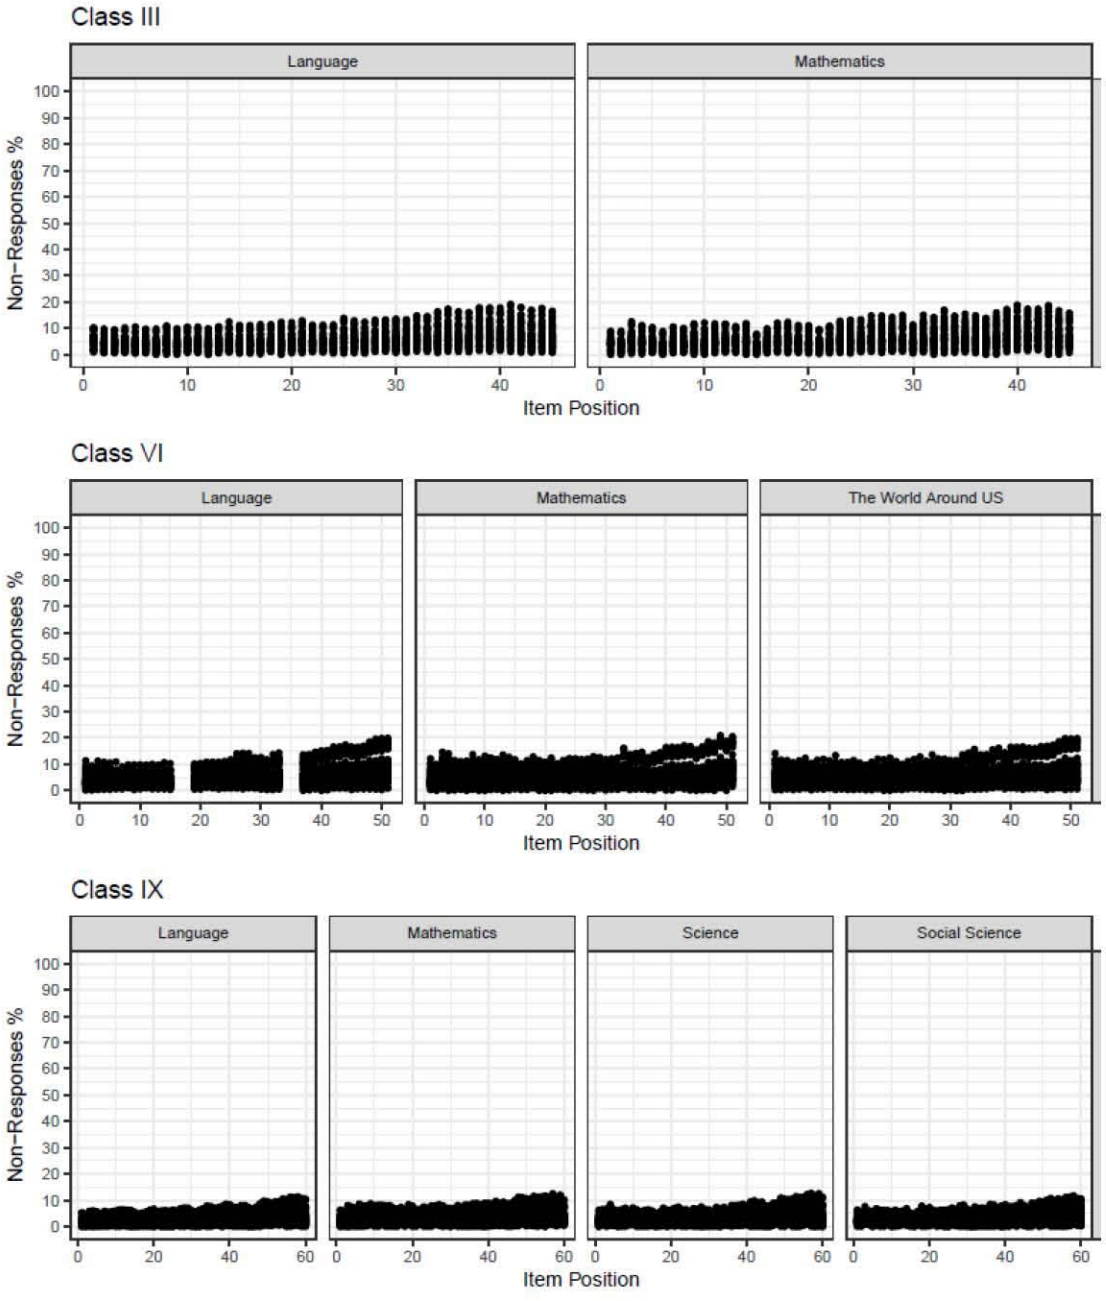

Figure 7.3. Percentages of missing responses by item position across states for each Grade 3, 6, and 9 subject.

7.2.2. Students Percent-Correct Distributions

Student performance was assessed based on the percentage of correctly answered test items. Any item in the form and subjects assigned without an answer (i.e., missing response) was considered

incorrect in the computation of percent correct scores. It must be noted that such student scores are not the best scores to report because they suffer from lack of comparability due to the test form not being equivalent in difficulty. They also do not incorporate background questionnaire information. Nevertheless, they are appropriate for evaluating the quality of students' response behavior.

Figure 7.4 presents the weighted student percent-correct performance distributions. In Grade 3 and 6, the range of performance is relatively broad with some indication of separation in performance as the Language and Mathematics distributions are nearly bimodal. The percent-correct mean and standard deviations show that the test appears relatively well targeted to the student populations. In Grade 9, the distributions are more peaked with some skewness to the right. The mean and standard deviation values indicate that the test is particularly difficult in Mathematics and Science.

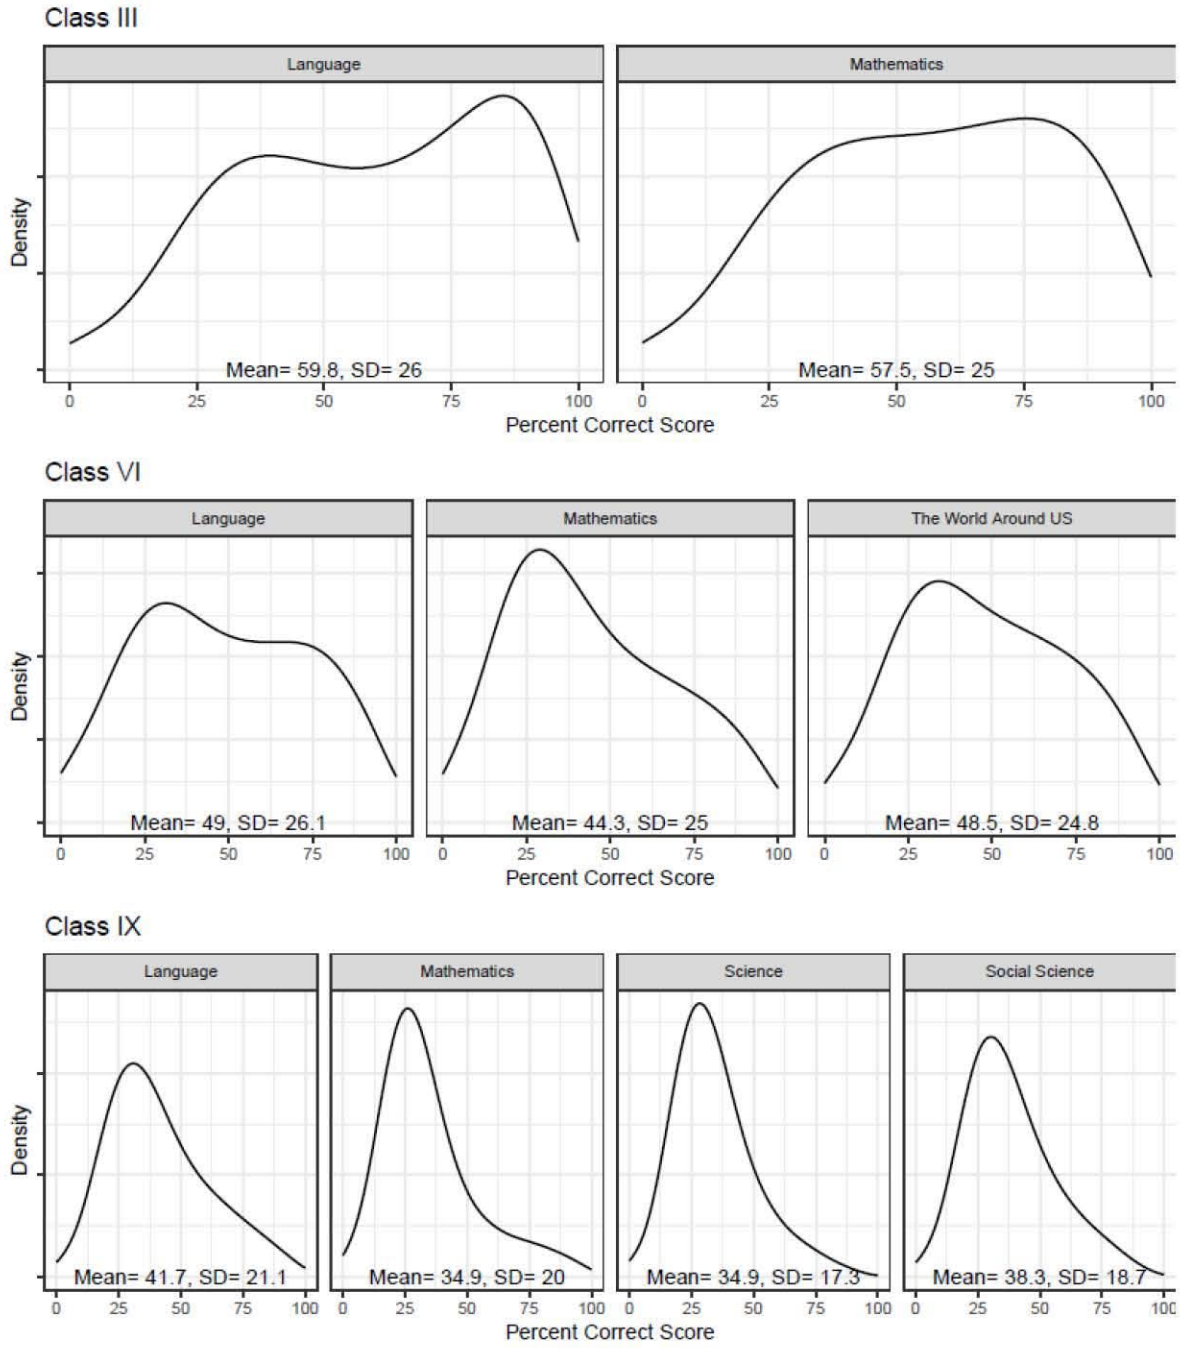

Figure 7.4. Distributions of Weighted Proportion-Correct Scores by Grades and Subject

7.3 Classical Item Analysis and Preliminary IRT

Classical Item Analysis (IA) is a statistical method used to evaluate the quality of test items based on their performance in assessments. Because IA does not make any modelling assumptions, it is an important step in assessing item measurement properties that are then further evaluated using item response theory (IRT) analyses.

At this main survey analysis stage, the goal of the classical IA and preliminary IRT is to conduct a final check of each item's performance, to identify remaining issues with each item if any, to correct any issue found if possible, and to remove an item from analysis and reporting if the validity of the

item data is not confirmed. The differential item functioning (DIF) analyses were conducted as part of the IRT scaling for language, gender, area, and school management subgroup. The DIF information was also considered at this stage of item review. Detailed descriptions of the DIF methods and results are provided in Chapter 9.

Tables 7.1 and 7.2 below describe the IA statistics and IRT parameters produced as well as the criteria used to flag any items found with one or more IA statistic or IRT parameter indicative of a potential issue. The IA statistics and the IRT parameters were reviewed by psychometricians and subject-matter experts, with particular attention to the flagged items.

The IA and final IRT difficulty and discrimination statistics and parameters are summarized in the next sections. All the item IA statistics (including IA missing and categorical response proportions and distractor biserial statistics) and final IRT parameters are provided in the Annexure.

Table 7.1 IA Statistics and Flagging Criteria

IA Statistic	What it Measures	IA Flagging Criterion	Meaning
Minimum P+ (Difficulty Index)	Item difficulty, as the proportion (or percentage) of students who answered the item correctly.	**Should be at least 0.1**	A value below 0.2 means the item is too difficult (less than 20% answered correctly).
Maximum P+ (Difficulty Index)	Item difficulty, as the proportion (or percentage) of students who answered the item correctly.	**Should not exceed 0.9**	A value above 0.9 means the item is too easy (more than 90% answered correctly), which limits its ability to differentiate between students.
Maximum percentage Missing Responses	The percentage of students who skipped or did not reach the item.	**Should not exceed 15%**	If more than 15% of responses are missing, it may indicate ambiguity, unclear wording, difficulty in understanding the question, or not sufficient time for students to complete the test (speededness) for the last items in the test.
Item-total biserial correlation (Discrimination Index)	How well the item differentiates between high- and low-performing students.	**Should be at least 0.15**	A value below 0.15 suggests the item does not effectively distinguish between students with different ability levels.
Distractor-total biserial correlation	Measures how a distractor (incorrect answer choice) correlates with the total test score.	**Should be less than the item-total biserial correlation**	If the distractor has a stronger correlation with the total score than the entire item, it may indicate the distractor is misleading or too attractive to test-takers, suggesting a poorly designed item.

Table 7.2 IRT Item Parameters and Flagging Criteria

IRT Parameter	What it Measures	IA Flagging Criterion	Meaning
a (Item Slope)	How well the item differentiates between high- and low-performing students. It is a model version of the classical IA discrimination statistic. It was set to be estimated between minimum of 0 and maximum of 3 on the IRT theta scale.	**Should be at least 0.15**	A value below 0.15 suggests the item does not effectively distinguish between students with different ability levels, or that the item cannot be modeled appropriately.
b (Item Difficulty)	Item difficulty, as modeled on the IRT theta scale. It is a model version of the classical IA difficulty statistic.	**Absolute value should be less than 6.**	As with extreme P+, extreme difficulty parameter suggests a too difficult or too easy item. It may also suggest that the data cannot be modeled appropriately.

7.3.1. Summary Results

Each item appeared in different positions in two different forms, therefore, IA analysis was first conducted separately by form to assess the stability, followed by an overall analysis using all combined data.

Figure 7.5 shows the differences in item difficulty (P+) and discrimination (Rbis) based on data from one form in which the item appears versus the other (all items appear in two forms). The figure indicates a high degree of consistency across forms for all items, grades, and subjects, confirming that form or position effects are appropriately small. Figure 7.5 also shows that the P+ and Rbis values cover a broad range.

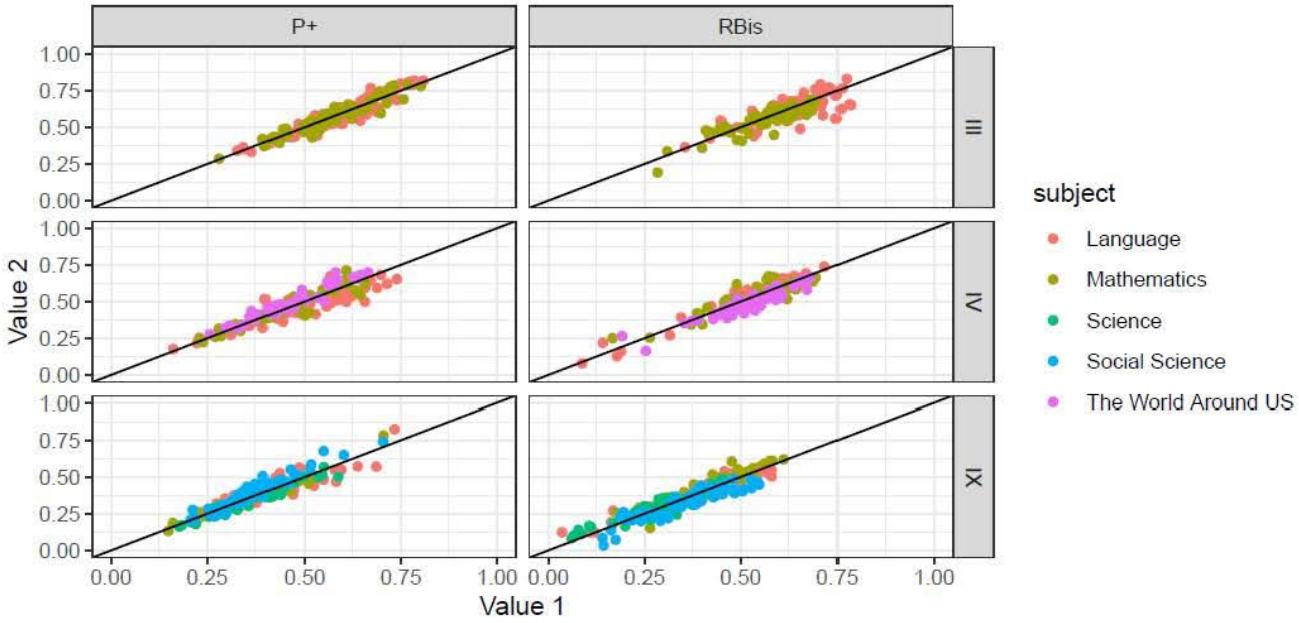

Figure 7.5. Scatter plots of item IA P+ and Rbis Statistics for Each Grade and Subject across the two forms each item is assigned to (Value 1 and Value 2).

Combining all the data available on all items, IA statistics and IRT item parameters results are summarized in Table 7.1. Overall, we see that most of the items had appropriate measurement characteristics for the PARAKH Rashtriya Sarvekshan 2024 main survey.

However, as Figure 7.5 and Table 7.3 show, overall item statistics. Table indicates that in grade 3 test forms were easy (average P+ well above 0.5) while in Grade 9, the forms were quite difficult (average P+ well below 0.5) with few or no items with P+ above 0.6 across subjects.

Table 7.3. Summary (mean and standard deviation) of classical and IRT item statistics by Grade and Subject.

		N	P+		Rbis		IRT *a*		IRT *b*	
Grade	Subject	items	Mean	SD	Mean	SD	Mean	SD	Mean	SD
3	Language	74	0.60	0.10	0.64	0.08	1.50	0.34	-0.53	0.47
3	Mathematics	58	0.57	0.11	0.55	0.09	1.27	0.31	-0.40	0.53
6	Language	40	0.52	0.10	0.59	0.07	1.44	0.48	-0.17	0.38
6	Mathematics	54	0.44	0.12	0.54	0.09	1.19	0.37	0.14	0.54
6	World	53	0.49	0.10	0.51	0.10	1.14	0.39	-0.05	0.46
9	Language	59	0.41	0.11	0.41	0.12	0.95	0.38	0.52	0.84
9	Mathematics	59	0.35	0.09	0.41	0.10	0.90	0.32	0.71	0.55
9	Science	59	0.35	0.09	0.30	0.10	0.66	0.27	0.98	0.86
9	Social Science	58	0.38	0.10	0.35	0.10	0.78	0.30	0.72	0.79

Note: Results obtained after the removal of the items listed in section 7.3.3 below.

7.3.2. Item Flagging Criteria

Items were flagged for review according to the IA criteria presented in Table 8.1 above. Regarding DIF, no or only small proportions of language subgroups DIF were identified and flagged for item review. With gender (boys/girls), area (urban/rural), and school management type, no item at all was flagged.

7.3.3. Item Review and Revisions

All items in all grades and subjects underwent content-expert and psychometric review, with particular attention given to the flagged items. Overall, relatively few items were flagged. As a result of the reviews, the following items and their associated data were removed from the analysis:

- **Grade 3:** 3 items (3LAN0005, 3LAN0045, 3WOR0026)
- **Grade 6:** 6 items (6LAN0035, 6LAN0037, 6LAN0044, 6LAN0045, 6LAN0060, 6WOR0067)
- **Grade 9:** 4 items (9LAN0109, 9MAT0051, 9SCI0006, 9SOC0109)

Chapter 8. Computing Sampling Weights

Sample weighting is an important process in PARAKH Rashtriya Sarvekshan 2024 to ensure that the survey results accurately reflect the target population. The weighting process accounts for selection probability and adjusts for potential non-response. It consists of two primary components:

- **Base Weights (BW):** Representing the inverse of the probability of selection at each stage of the sampling design.
- **Non-Response Adjustments (NRA):** Adjustments made to compensate for non-response at various levels.

Sampling weights are calculated separately for each grade and district-level stratum.

- Sampling weights ensure survey representativeness by adjusting for selection probability and non-response, while incorporating base weights, trimming and district-level alignment for balanced and accurate results.
- Sampling weights tailored for each grade and district stratum ensure precise and representative estimates.

8.1 Sampling Weights Components

The multi-stage sampling design that was proposed for PARAKH Rashtriya Sarvekshan 2024 employed the following standard weighting components:

- School Base Weight (BWSch)
- Section Base Weight (BWSec) *(Not calculated, as the data is not available)*
- Student Base Weight (BWStu) *(Equal to 1 if all students in a section are selected)*
- School Non-Response Adjustment (SchNRA)
- Section Non-Response Adjustment (SecNRA) *(Not applicable, as only one section per school is selected)*
- Student Non-Response Adjustment (StuNRA)

Since only one section per school is selected, regardless of whether the number of students falls below the required sample of 30, additional sections are not included. Therefore, the sample weights are computed using a two-stage sampling approach, considering only school-level and student-level weights.

8.1.1 Calculation of Sampling Weights

School-Level Weights

1. School Base Weight (BWSch): The School Base Weight (BWSch) ensures fair representation of each school in the survey by accounting for differences in student population. It is calculated by dividing the total number of students in a district by the number of sampled schools and adjusting for school size. Since larger schools have more students and smaller schools have fewer, dividing by the number of students in each school helps distribute the weight appropriately, preventing over- or under-representation. The School Base Weight for school j is given by:

$$BWSch^{j} = \frac{Total\ no\ of\ students\ in\ i^{th}\ districts}{No\ of\ sampled\ schools\ from\ the\ i^{th}\ districts * No\ of\ students\ in\ j^{th}\ school}$$

2. School Non-Response Adjustment (SchNRA): Adjusts for non-response at the school level by dividing the total number of sampled schools by the number of participating schools within a district. The School Non-Response Adjustment for district i is given by

$$SchNRA^{i} = \frac{Total\ no\ of\ sampled\ schools\ in\ i^{th}\ district}{No\ of\ participating\ schools\ from\ i^{th}\ district}$$

Section-Level Weights

As noted, section-level weights are not calculated. In PARAKH Rashtriya Sarvekshan 2024, only one section per school is selected. Data on the number of sections per school and the student count in each section is not available for PARAKH Rashtriya Sarvekshan 2024. If section sizes vary significantly across schools, this could potentially introduce bias into the weights. However, if section sizes are relatively uniform or if student responses are independent of section size, any potential bias would be minimal.

Student-Level Weights

1. Student Base Weight (BWStu): The student base weight is calculated as the total number of students in a school divided by the number of sampled students.

$$BWStu^{k} = \frac{Total\ no\ of\ students\ in\ j^{th} school}{No\ of\ sampled\ students\ from\ the\ j^{th} school}$$

2. Student Non-Response Adjustment (StuNRA): This variable adjusts for non-response at the student level by dividing the total number of sampled (and eligible) students by the number of participating students.

$$StuNRA^j = \frac{Total\ no\ of\ sampled\ students\ in\ j^{th}\ schools}{No\ of\ participating\ students\ from\ j^{th} school}$$

Final Sampling Weight (SW)

The final student weight (SW) for each student is calculated by multiplying the base weights and the non-response adjustments:

$$SW^m = BWSch^j * SchNRA^i * BWStu^k * StuNRA^j$$

The estimated population size can be obtained by summing the final student weights across schools.

Special Adjustments for Tamil Nadu

In the case of Tamil Nadu, one district, Villupuram is missing from the PARAKH Rashtriya Sarvekshan 2024 dataset. To ensure representation in the average performance calculation, an adjustment factor needs to be applied to all students in the state.

The final sampling weight (SW) for each m^{th} student in Tamil Nadu is determined by incorporating a non-response adjustment for the missing district:

$$DisNRA\ (Tamil\ Nadu\ ) = \frac{Total\ no\ districts\ in\ tamil\ nadu\ (n)}{n-1}$$

Thus, the final sampling weight every m^{th} student is calculated as:

$$SW^m = DisNRA\ (Tamil\ Nadu\ ) * BWSch^j * SchNRA^i * BWStu^k * SchNRA^j$$

For all other states where no districts are missing, the final student weights are not adjusted at the state level.

8.1.2 Trimming Process

To manage extreme variations in sampling weights, a trimming factor is applied. Trimming helps prevent excessively large weights from skewing the survey estimates. The trimming factor is determined as: This process ensures that no individual student weight is disproportionately high, maintaining statistical stability.

After the calculation of SW the trimming factor was applied as - median *4

8.1.3 District-Level Adjustment

After applying the trimming factor, a district-level adjustment is performed to restore the overall district size. This step ensured that the total estimated student population remains consistent with the actual district-level student counts. The adjustment factor is computed by comparing the trimmed weights to the initial weights within each district and scaling them accordingly.

Sampling weights ensure survey results accurately reflect the target population by adjusting for selection probabilities and non-response. This helped to enhance statistical precision and representativeness in the PARAKH Rashtriya Sarvekshan 2024 survey across districts and grade levels.

8.2 Design effects

The design effect is a statistical measure that reflects how the survey's complex sampling design affects the precision of the results. It indicates how much the sampling error increases (or decreases) relative to what would be expected under simple random sampling (SRS).

For the PARAKH Rashtriya Sarvekshan 2024, the design effect was calculated based on the sampling error variance estimated using the jackknife resampling method. For each state, the number of replicate weights was determined as half the number of sampled schools, allowing flexibility given the wide variation in sample sizes and the number of schools across states and UTs. This approach ensured that the replication scheme was appropriate for each state's sampling structure. The detailed methodology for this calculation follows Rust (2014) and is described in this report.

Following this approach, the design effect (DEFF) was then calculated as the ratio of the sampling error variance obtained from the jackknife procedure to the variance expected under simple random sampling (SRS) for each estimate. Thus:

$$Design\ Effect\ (DEFF) = \frac{Sampling\ Error\ Variance}{\frac{Sample\ Variance}{Sample\ Size}}$$

This calculation corresponds to Design Effect 3, as reported in PISA technical report (OECD, 2024), which isolates the impact of the sampling design alone.

In most cases, larger sample sizes tend to be associated with larger design effects, primarily because bigger samples typically involve more complex sampling structures with greater clustering effects. However, this is not always the case, as other factors such as variability within clusters and weighting adjustments also influence the design effect. This can be seen in the results reported in chapter 10, by grade and subject.

Thus, we see that the design effect values are relatively high (12.1 in average in Grade 3 language) with a relatively wide range of values across states, shaped by differences in sample size, the number of sampled schools, and the degree of clustering in the sampling design. States with larger sample sizes and more complex sampling structures, such as Gujarat, Telangana, and Karnataka, generally reported higher design effects (values above 15 in Grade 3 Language), indicating greater variance inflation due to clustering. In contrast, smaller states and UTs like Lakshadweep, Goa, and Sikkim tended to show lower design effects (values below 7 in Grade 3 Language), reflecting simpler sampling structures with less clustering impact.

Design effects (DEFF) highlight the impact of complex sampling: Larger states (e.g., Gujarat, Karnataka) had DEFF > 15, while smaller UTs (e.g., Lakshadweep, Goa) had DEFF < **7.**

The relatively high values and the variations in the design effects reported in Chapter 10 highlight the importance of accounting for the complexity of each state's sampling design in the estimation of the errors associated with the reported state mean performance. By using standard error calculations that account for the clustering and weighting, the reported standard errors and confidence intervals appropriately reflect the complexity of the survey's sampling design.

8.3 Replicate weights for sampling variance estimation

In large-scale survey assessments, two sources of error variances are considered: the sampling error and imputation error. To estimate the sampling error variance considering the complex sampling, a replication method can be employed.

- Variance estimated using the Paired Jackknife (JK2) method by systematically pairing schools within strata and assigning replicate weights.
- Number of replicates set at half the schools in each State/UT to ensure precise and reliable error measurement.

The paired Jackknife replication method (JK2) is recommended as it is simple and effective in the context of large-scale surveys (Rust, 2014). Within each grade, sampled schools within each state must be sorted based on the variables used for selection according to the sampling framework. These variables include school management within each district (e.g., private, central government), area or locality (urban, rural), and medium of instruction (e.g., language of assessment). Once the sampled schools are sorted accordingly, the following steps can be used to generate replicate weights, assuming the number of replicate weights is 100:

1. Assign variance strata (VarStrat) by pairing sampled schools within the same stratum, starting from 1.
2. Randomly assign each school within a stratum a variance unit (VarUnit) of either 1 or 2.
3. Compute the first set of replicate weights (W1) for the first school pair as follows:
    a. Assign the school in VarStrat = 1 and VarUnit = 1 a sampling weight of 2 × W0.
    b. Assign the other school in the pair (VarUnit = 2) a sampling weight of 0.
4. Repeat the procedure for subsequent replicate weights:
    a. For W2, apply the same method to the second pair of schools.
    b. For W3, apply the method to the third pair, and so on.
5. In the case of the number of schools is odd; the last Var_Strat would include three schools, and accordingly the Var_Unit will be randomly assigning 1 or 2 to these schools (i.e., 1, 1, 2 or 1, 2, 2).
6. Assign the generated replicate weights to each student within their respective schools.

This method ensures accurate variance estimation in large-scale survey assessments while maintaining consistency in sampling procedures.

Since there was a very large variation in the number of sampled schools for each State/UT, it was chosen to use a different number of replicate weights for each State/UT. The number of replicates was set at half the number of schools. Overall estimates of standard errors can then be obtained by aggregating the design effects that can be estimated for each State/UT.

Chapter 9: IRT and Population Modelling Analyses

This chapter presents the results of the Item Response Theory (IRT) and population modelling analyses of the PARAKH Rashtriya Sarvekshan 2024 assessment data by grades (3, 6, and 9) and subjects (language, mathematics, the world around us, science, and social science). These analyses followed the methods described in detail in scaling method chapter.

IRT results include the list of items flagged by the differential item functioning (DIF) procedure implemented across medium of instruction, gender, area and school management subgroups, as well as the national and group-specific item parameters used in the subsequent population modelling and proficiency estimation steps.

The national and group-specific item parameters and their characteristic curves (ICCs) showing how each item functioned are reported in this chapter's Annexes. The test characteristic curves (TCCs) show how the PARAKH Rashtriya Sarvekshan 2024 students' proficiencies estimated on a common latent theta scale relate to their percent correct item responses on each test form. Item parameters, ICCs and TCCs are presented on the standardized national IRT theta scales to show the alignment of the item and test characteristics to the proficiency of the PARAKH Rashtriya Sarvekshan 2024 populations.

The population-modelling analysis results reported in this chapter include summaries of the data-reduction technique (number of predictors, number of selected components, and percentages of variance explained), the student's multiple plausible values (PVs) generated from the model, the PV-based test reliability estimates, and the correlations between subject proficiencies for each grade (3, 6 and 9).

Finally, the scale transformations parameters used to report the students, populations, and subgroup proficiency estimates on the PARAKH Rashtriya Sarvekshan 2024 reporting scales are provided. As indicated in Chapter 6, the proficiencies initially produced from each state's population model on a common national IRT theta scale were first standardized and then transformed to the PARAKKH Rashtriya Sarvekshan 2024 reporting scales.

Overall, results showed that only a few items had to be removed from the assessment, that the data was effectively modelled using unidimensional IRT and multivariate latent regression models. They also show that while forms difficulty and discrimination align well with national students' proficiencies in Grade 6, moderately well, although possibly a little easy for Grade 3, this clearly is not the case in Grade 9, where in some subject the test were hard for the students. As a consequence, we can see comparing the measurement reliability results in Tables 9.9, 9.10 and 9.11 that while still acceptable, measurement quality is noticeably lower and below expectation in Grade 9 for mathematics, science and social science with average PV reliability over forms at .811, .822 and .834, respectively, compared with the PV reliabilities for Grades 3 and 6 which were all greater than .866 on average for the nation.

9.1 IRT Analysis

IRT item calibration and DIF were conducted following the methodologies and the procedures described in Chapter 6, using the R package TAM (Robitzsch et al., 2025). The IRT model of choice was the two-parameter logistic (2PL) model (Birnbaum, 1968) and the root mean squared deviation (RMSD) fit statistic was chosen to identify DIF (Yamamoto et al., 2019).

Each calibration's outputs were thoroughly reviewed to ensure that estimation process reached appropriate conversion, that the overall model-data fit was appropriate, and that the identification of items exhibiting DIF and their specific parameter estimation also converged.

Results of the DIF analyses and the test characteristic curves (TCC) representing each form's measurement properties are presented in the next two sections.

9.1.1 DIF

DIF analyses using the RMSD fit statistic were conducted across key groups, including language (medium of instruction and test form version), gender, area, and school management, as part of the IRT scaling of the PARAKH Rashtriya Sarvekshan 2024 data. The methodology and criteria for estimating language-specific item parameters, along with the decisions regarding item removal for specific groups, are outlined in this Chapter. To reiterate, if the RMSD was larger than 0.15 and the number of responses larger than 200, language-specific item parameters were estimated. Furthermore, if for such language-specific item parameters either the discrimination was smaller than 0.1 or the difficulty smaller than –6 or larger than 6, the item was switched off. Table 9.1 lists the 23 language groups considered in the DIF analysis.

Table 9.1: Medium of instruction (language of assessments)

Grade	Medium of instruction		
3, 6, 9	- Assamese - Bengali - Bodo - English - Garo - Gujarati - Hindi - Kannada	- Khasi - Konkani - Malayalam - Manipuri - Marathi - Mizo - Nepali - Odia	- Punjabi - Sanskrit - Santhali - Sindhi - Tamil - Telugu - Urdu

Table 9.2 shows the DIF results relating to the language of assessment for Grade 3. For the subject Language, 18 items received language-specific item parameters which is 1.1% overall (18 specific items / (74 items x 23 language groups)). The number of specific items ranged from 1 to 3 per language, with 3 items in Garo and Malayalam, 2 items in Khasi, Sanskrit, and Tamil, and 1 item in Assamese, Kannada, Marathi, Mizo, Punjabi, and Urdu. However, after the content review, it was decided that no items would be removed from any language. For Mathematics, 22 items received language-specific parameters totalling 1.6% (22 specific items / (58 items x 23 language groups – 4 removed items)). Also, in Mathematics, in four languages, one item was removed. For Grade 3, the language with the most language-specific item parameters is Garo. However, note that even with

language-specific parameters for 6 items for Mathematics, 89% (51/57) of the items have common item parameters.

Table 9.2: Numbers of items included in scaling, with specific parameters, and removed by, subject and grade due to language DIF for Grade 3

Grade	Subject	Language	N of items	N Specific	N Removed
3	Language	Garo	74	3	0
3	Language	Malayalam	74	3	0
3	Language	Khasi	74	2	0
3	Language	Sanskrit	74	2	0
3	Language	Tamil	74	2	0
3	Language	Assamese	74	1	0
3	Language	Kannada	74	1	0
3	Language	Marathi	74	1	0
3	Language	Mizo	74	1	0
3	Language	Punjabi	74	1	0
3	Language	Urdu	74	1	0
3	Mathematics	Garo	58	6	1
3	Mathematics	Sanskrit	58	3	1
3	Mathematics	Urdu	58	3	1
3	Mathematics	Gujarati	58	2	1
3	Mathematics	Mizo	58	2	0
3	Mathematics	Odia	58	2	0
3	Mathematics	Khasi	58	1	0
3	Mathematics	Malayalam	58	1	0
3	Mathematics	Marathi	58	1	0
3	Mathematics	Tamil	58	1	0

In Table 9.3, the DIF results relating to the language of assessment for Grade 6 are shown. For Language, based on reviewing analysis results and content after the main study, 5 of the original 45 items were removed from the item pool before the final scaling. Also, for Language, 9 items received language-specific item parameters which is approximately 1.0% overall (9 specific items / (40 items x 23 language groups – 4 removed items)). The number of specific items ranged from 1 to 3 per language, with 3 items in Bodo, 2 items in Malayalam and Marathi, and 1 item in Odia and Sanskrit. For Mathematics, 18 items received language-specific parameters totalling approximately 1.5% (18 specific items / (54 items x 23 language groups – 3 removed items)). Also, in Mathematics, in one language (Sanskrit), two items were removed, and in one language (Marathi), one item was removed. For World Around Us, 1 item was removed from the pool before final scaling and 44 items received language-specific parameters totalling approximately 3.6% (44 specific items / (53 items x 23 language groups – 3 removed items)). Overall, for Grade 6, the languages with the most language-specific item parameters across the three subjects are Bodo and Malayalam. However, with language-specific parameters for 12 items for World Around Us, 77% (40/52) of the items still have common item parameters to establish a comparable scale.

Table 9.3: Numbers of items included in scaling, with specific parameters, and removed by, subject and grades due to language DIF for Grade 6

Grade	Subject	Language	N of items	N Specific	N Removed
6	Language	Bodo	40	3	2
6	Language	Malayalam	40	2	0
6	Language	Marathi	40	2	1
6	Language	Odia	40	1	1
6	Language	Sanskrit	40	1	0
6	Mathematics	Sanskrit	54	6	2
6	Mathematics	Bodo	54	3	0
6	Mathematics	Malayalam	54	3	0
6	Mathematics	Marathi	54	2	1
6	Mathematics	Mizo	54	1	0
6	Mathematics	Odia	54	1	0
6	Mathematics	Tamil	54	1	0
6	Mathematics	Urdu	54	1	0
6	World Around Us	Bodo	53	12	1
6	World Around Us	Malayalam	53	12	1
6	World Around Us	Assamese	53	4	1
6	World Around Us	Kannada	53	3	0
6	World Around Us	Mizo	53	3	0
6	World Around Us	Sanskrit	53	3	0
6	World Around Us	Marathi	53	2	0
6	World Around Us	Odia	53	2	0
6	World Around Us	Gujarati	53	1	0
6	World Around Us	Punjabi	53	1	0
6	World Around Us	Tamil	53	1	0

Table 9.4 shows language-related DIF results for Grade 9. After reviewing results, 1 of the original 60 items was removed before the final scaling. For Language, 23 items received language-specific item parameters which is approximately 1.0% overall (23 specific items / (59 items x 23 language groups – 3 removed items)). The number of specific items ranged from 1 to 7 per language, with 7 items in Malayalam being the maximum. For Mathematics, also, 1 item was removed from the pool and 10 items received language-specific parameters totalling about 0.7% (10 specific items / (59 items x 23 language groups – 3 removed items)). For Science, 1 item was dropped before scaling and 14 items received specific parameters, which equals 1.0% (14 / (59 x 23 – 1)). For Social Science, 2 items were dropped before scaling, and 18 items received specific parameters, which amounted to 1.4% (18 / (58 x 23 – 1)). For Grade 9, the language with the most language-specific item parameters across all four subjects is Malayalam. With language-specific parameters for 7 items, 88% (51/58) of the items still have the common national item parameters.

Table 9.4: Numbers of items included in scaling, with specific parameters, and removed by, subject and grade due to language DIF for Grade 9

Grade	Subject	Language	N of items	N Specific	N Removed
9	Language	Malayalam	59	7	1
9	Language	Bodo	59	6	2
9	Language	Punjabi	59	3	0
9	Language	Marathi	59	2	0
9	Language	Odia	59	2	0
9	Language	Assamese	59	1	0
9	Language	Sanskrit	59	1	0
9	Language	Urdu	59	1	0
9	Mathematics	Sanskrit	59	4	1
9	Mathematics	Malayalam	59	3	1
9	Mathematics	Assamese	59	1	1
9	Mathematics	Punjabi	59	1	0
9	Mathematics	Urdu	59	1	0
9	Science	Malayalam	59	7	0
9	Science	Marathi	59	3	0
9	Science	Bodo	59	2	1
9	Science	Sanskrit	59	1	0
9	Science	Tamil	59	1	0
9	Social Science	Malayalam	58	5	0
9	Social Science	Bodo	58	4	1
9	Social Science	Punjabi	58	4	0
9	Social Science	Assamese	58	1	0
9	Social Science	Kannada	58	1	0
9	Social Science	Marathi	58	1	0
9	Social Science	Sanskrit	58	1	0
9	Social Science	Tamil	58	1	0

In summary, the vast majority of items across the 23 language versions of the PARAKH Rashtriya Sarvekshan 2024 assessments were appropriately modelled using common item parameters. The percentage of items that required language-specific item parameters or were removed due to DIF was relatively low across most languages. Finally, the gender, area, and school management DIF analyses did not flag any item using the RMSD cut-off.

9.1.2 Item and test characteristics

As indicated earlier, following the procedure described in Chapter 6, the estimated item parameters obtained from calibration and the PVs were scaled to the standardized national latent regression theta scales and then to the PARAKH Rashtriya Sarvekshan 2024 reporting scales for each grade by

subject. The item characteristics curves for all the items in all grades and subjects are provided in Annex.

The grade by subect test characterisctic curves were computed as the average of the item characteristics curves to show the expected proportion-correct across the student's proficiency range, from lowest to highest performance.

Figures 9.1 to 9.3 show the test characteristic curves (TCC) of the grade by subject forms using the IRT theta proficiency scales (left plots) and the PARAKH **Rashtriya Sarvekshan** 2024 reporting scales (right plots). For any given proficiency on the x-xis, the TCCs indicate the form's expected proportion-correct on the y-axis. Vertical lines have been added to the plots to show the weighted national means (solid lines) as well as the means minus and plus the national standard deviations (dashed lines). Horizontal lines have been added to help visualise the proficiency levels associated with the forms' expected proportion correct of 0.4, 0.5, and 0.6 as they intersect with the forms' TCCs.

The theta scaled plots (left) show that the Grade 6 forms are reasonably well aligned with students' proficiencies to optimize measurement—they are relatively close to average difficulty and most discriminating within theta (-1, 1) where most students' proficiencies are. However, we can see that the Grade 3 forms tend to be a bit too easy and the Grade 9 forms too difficult, as well as less discriminating. Comparing the alternative forms within grade and subject, we see that while they contained different subsets of items, they have similar TCCs (athough one Grade 9 science form is noticeably more difficult and less discriminating than the others).

The PARAKH **Rashtriya Sarvekshan** 2024 scaled plots (right) shows the same information presented in a criterion-referenced way with different means and SDs across grade and subject as more or less students performed below, above or close to the performance needed obtain 0.5 proportion correct on the test forms.

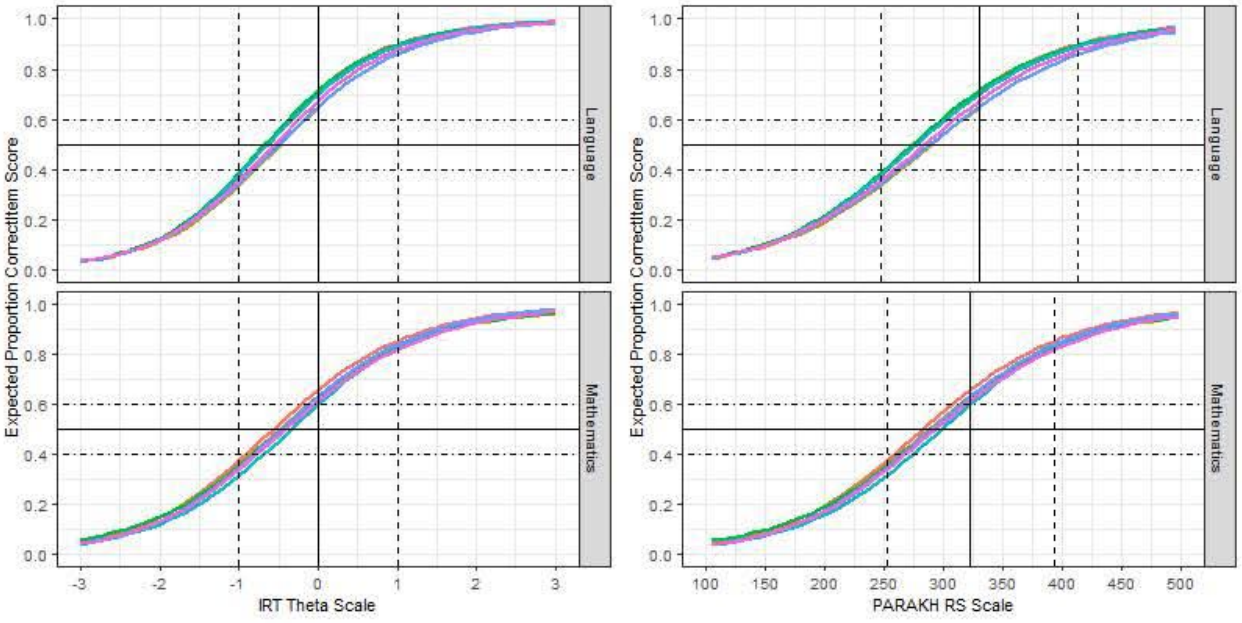

Figure 9.1. TCCs for Grade 3, by subject and booklet.

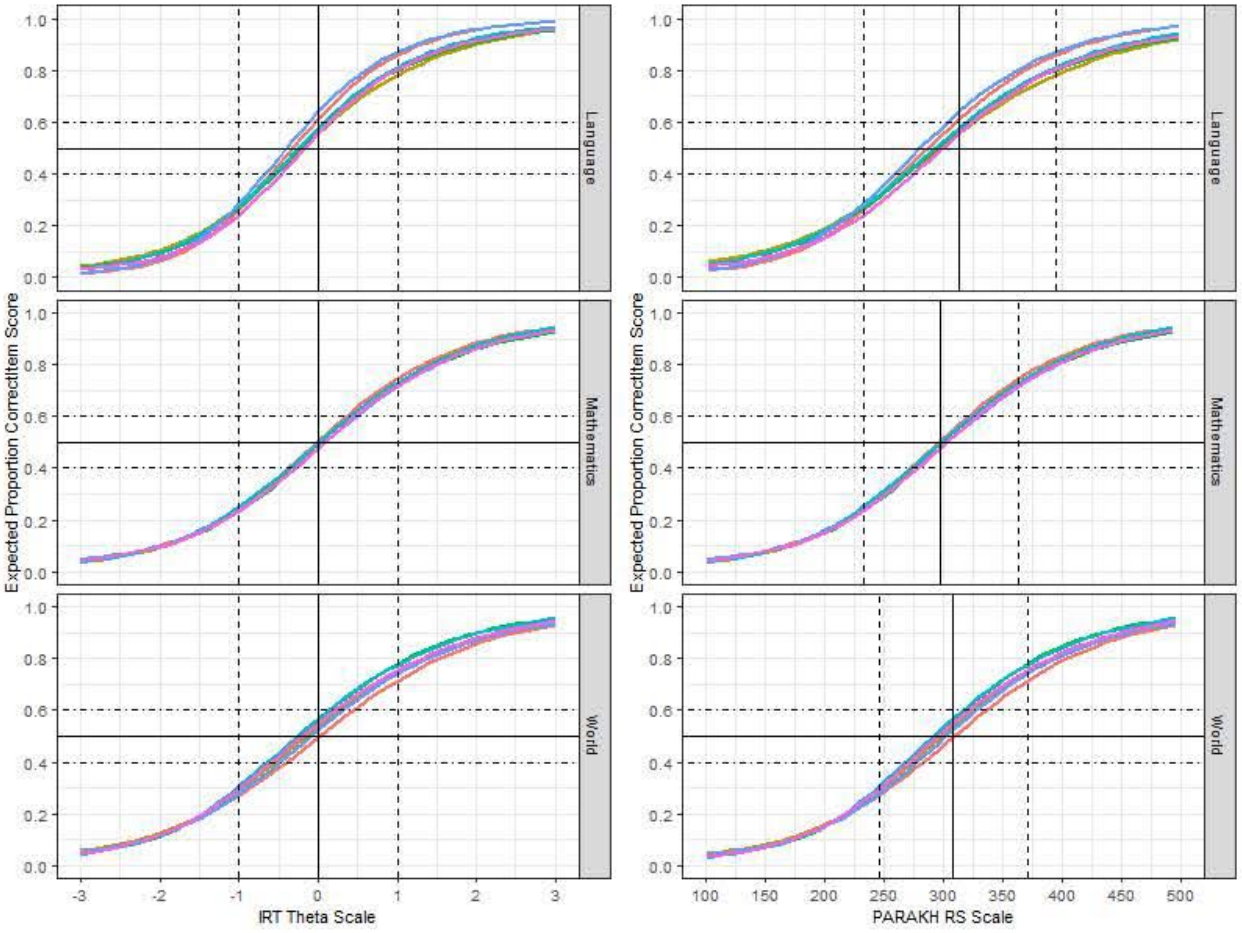

Figure 9.2. TCCs for Grade 6 by subject and booklet.

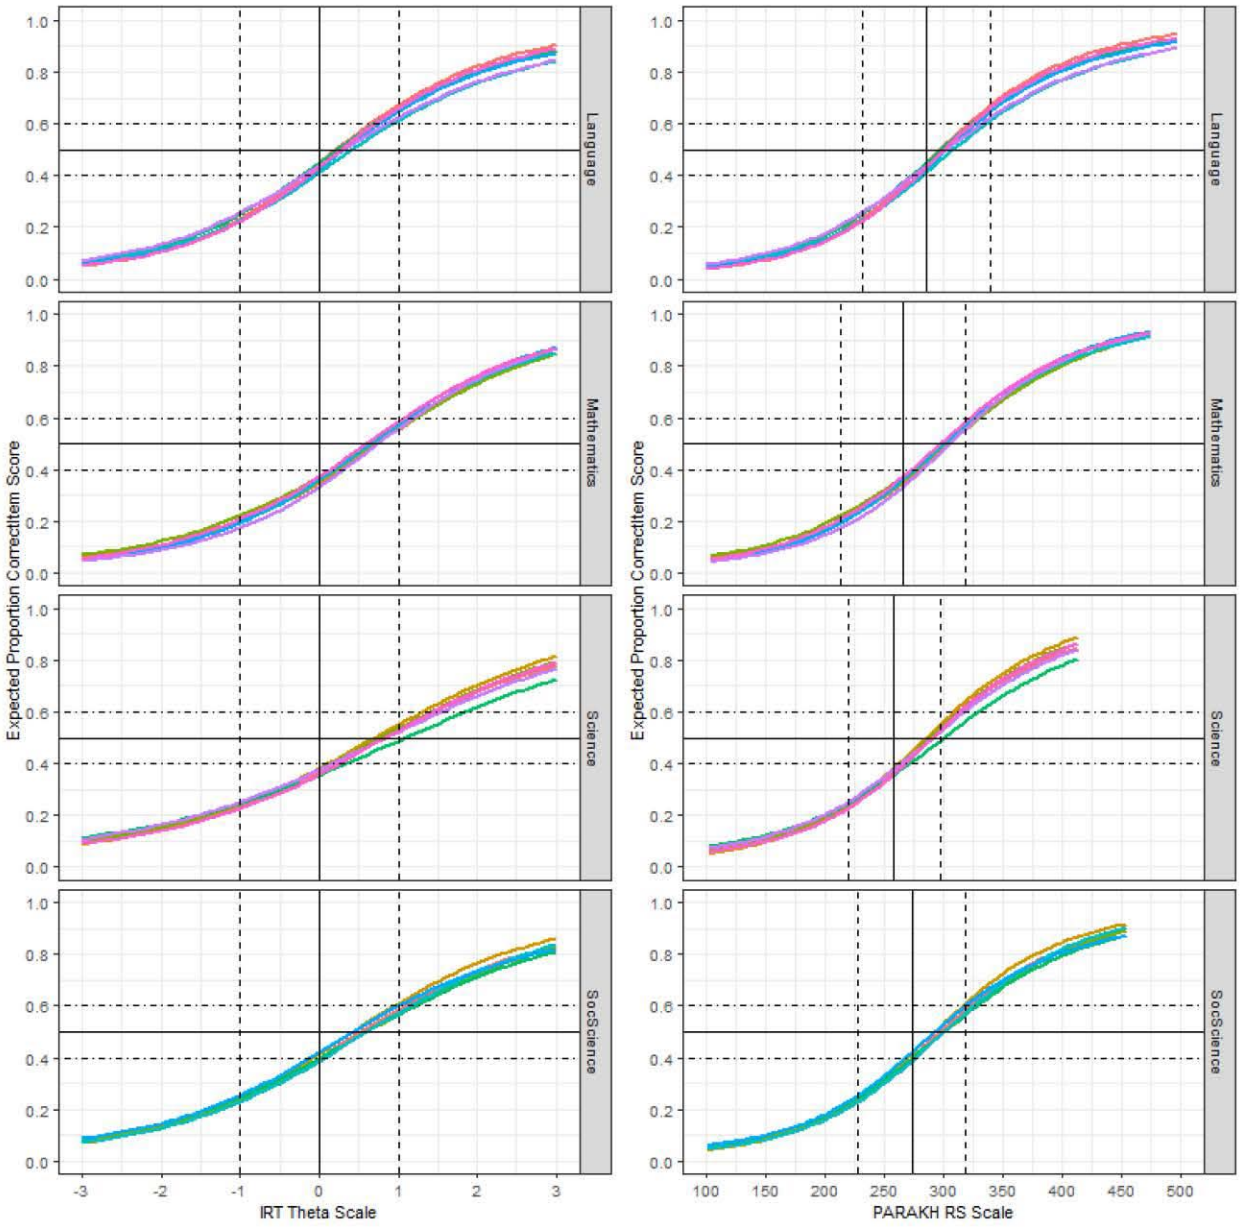

Figure 9.3. TCCs for Grade 9 by subject and booklet.

9.2 Population modelling outcomes

9.2.1 Data-reduction outcomes

As noted, population models were created for each state/UT with a sample of at least 5,000 students. This minimum sample size was considered large enough to ensure modelling convergence and accurate model parameters estimates—this is a target sample size typically used in large-scale assessment studies such as PISA (OECD, 2024, Chapter 11). Tables 9.5, 9.6 and 9.7 below indicate the states that had enough data to create state-specific models as well as the relatively small states which data were combined to be able to estimate a population model and generate plausible values for them.

For the states with a sample of at least 5,000 students, the following demographic variables and variables from the student questionnaire were included as predictor variables:

- District
- School
- Gender
- Social group
- Area
- School management
- Children with special needs
- Economically weaker section
- Medium of instruction
- Particularly vulnerable tribal group
- All questions from the student questionnaire

Dummy coding was employed for categorical variables (i.e., Yes/No, strongly disagree/disagree /agree/strongly agree, etc.), which included the coding of missing responses for any of the predictor variables.

States/UTs with fewer than 5,000 sampled students were grouped into a combined population model. For this case, interactions between state and gender, state and social group, state and area, and state and school management were also included as predictor variables as these are key reporting variables.

The variables listed above, and the dummy coding resulted in a large number of predictor variables (see, e.g., the results for Uttar Pradesh in Tables 9.5–9.7) which, together with the EAP estimates of student proficiency for each subject from the item calibration phase, were entered into a partial least squares (PLS) analysis as described in Chapter 6. The purpose of this PLS analysis was to determine the optimum number of components (smaller than the number of predictor variables) that captured as much of the relevant information available in the predictor variables which ensures that the model is not overparametrized.

Tables 9.5–9.7 display the total number of components, the number of selected components based on the rules described in Chapter 6, and the proportions of variance explained in the predictors and EAPs of each subject for Grades 3, 6 and 9. The last row in the table adheres to the combined model for the eight states/UTs with fewer than 5000 sampled students. Although the proportion of variance explained in the predictors is lower than thresholds used in other large-scale survey assessments (e.g., 0.80 in PISA), the use of PLS ensures that the selected components explain 95% of the maximum proportion of variance explained in the EAPs. This means that with the selected number of components there is little left to explain in the students' proficiencies. Furthermore, the number of selected components is kept to a minimum so that the estimation of the latent regression model is generally more stable. Finally, it can be seen from the tables that the upper bound of not exceeding 2/3 variance explained in the EAPs to prevent overfitting is never reached.

Table 9.5: Summary of PLS for selecting components to enter population model for Grade 3.

9.2.2 Plausible Values (PVs)

Once the states' latent regressions models were established, the students' multiple proficiency estimates (plausible values or PVs) were drawn from the students' state model. Then, following the scaling procedure described in chapter 6, the PVs were scaled to the standardized theta scale and the PARAKH Rashtriya Sarvekshan 2024 reporting scale. This was done by grade and subject. It resulted in the weighted national theta proficiency having a mean of 0 and a standard deviation of 1 for each of the grades and subjects.

The transformation parameters to scale the theta PVs to the PARAKH Rashtriya Sarvekshan 2024 reporting scales are given in Table 9.8.

Table 9.8: Plausible values PRARAKH Rashtriya Sarvekshan 2024 standardised theta to reporting scale transformation parameters.

	Social Science	45.283	273.271

9.2.3 PV-based reliability

As noted, student proficiencies were estimated via latent regression IRT models to link student cognitive responses and contextual variables. The latent regression models led to the posterior proficiency distribution for each student, from which five PVs per student were drawn in each assessed subject. Table 9.9 to 9.11 shows the reliability of the assessments based on the PVs generated by the latent regression IRT models developed for each state/UT. Note that these reliabilities represent the measurement precision obtained through both the scaling and population model.

9.2.4 Correlations between subjects

Tables 9.12 to 9.14 report the correlations between the subjects. The correlation between Language and Mathematics seems to drop from across grades, but this is partially due to the decreasing reliabilities. That is, the average PV-based reliability for Language is .901 in Grade 3, .868 in Grade 6 and .856 in Grade 9. For Mathematics, the average PV-based is .880 in Grade 3, .866 in Grade 6, and .811 in Grade 9. For example, corrected for attenuation, the correlations between Language and Mathematics are 1.00, .87, and .82 for Grades 3, 6 and 9, respectively.

Chapter 10: National, State and District Proficiencies

This chapter reports national, state, and district level reported score mean (Mean) and standard deviations (SD) statistics, overall and by key subgroups defined by gender (boys, girls), area (urban, rural), school management type (state government, government-aided, private recognized, and central government schools), and social group (Schedule Castes or SC, Scheduled Tribes or ST, Other Backward Classes or OBC, and General). The standard error associated with the mean (SE) is also provided at the state level to show the level of uncertainty associated with the reported state means and its variation across states. The significance of the difference between each state and national means as well as the differences between the key subgroup means at the national and state levels (Sign) are also reported. For example, Sign would indicate whether a particular state is performing differently— significantly higher, lower not significantly differently than the national population—or whether one subgroup is performing differently when compared to another (e.g., girls versus boys nationally or within states).

To facilitate the interpretation of the mean differences, the Sign statistics is reported according to three significance categories to indicate whether a mean compared to another is significantly lower (-1), not significantly different (0), or significantly higher (1). At the national level, effect size (ES) rather than significance is reported when subgroups differences are reported. This is because the national sample sizes are so large that even minute differences would be significant. In such case ES is more meaningful.

The next section in this chapter highlights the methods employed and the key outcomes from the data analyses. It is followed by a section describing the methods used to compute the summary statistics, and finally, followed by sections reporting all of the Grades 3, 6, and 9 key national, state and district level proficiency outcomes. More detailed results are provided in annex.

10.1 Computation of the Summary Statistics

The summary statistics reported in this chapter are based on the model-based students' weights and plausible values (PVs) reported on the PARAKH Rashtriya Sarvekshan 2024 scales. Five PVs per student were produced and used in computing the national, state, and district summary statistics. Following the approach used in other large-scale assessments such as PISA (OECD, 2024) and given each student's weight and five PVs, summary statistics are computed as follows.

The weighted mean (Mean) and weighted standard deviation (SD) statistics were computed for each of the five sets of PVs (students' PV1s, PV2, …, PV5) and then averaged.

At state level, the standard error of the Mean (SE) was computed as the square root of the sampling error variance plus the imputation variance (measurement error variance). The sampling error variance was calculated with the jackknife method for each state with an appropriate number of replicate weights, the number of schools divided by two (see, e.g., Rust, 2014). The reason for this approach is that due to the large variation in sample size and thus the number of schools across

states/UTs, there is no satisfactory number of replicate weights that is appropriate for all states/UTs. The imputation variance was calculated as the variance among the five sets of PV Means.

Effect sizes (ES) were computed using Cohen's d formula: d = (Mean focal – Mean reference) / Pooled Standard Deviation. Effect size was reported at the national level and used to help assess the direction and the importance of subgroup mean differences (e.g., a state's Girls's versus Boys's mean). In interpreting effect sizes: negative values indicate that the group chosen as reference performs higher than the focal group; positive values that the focal group performs higher than the reference group. The magnitude of an ES was considered large when it was equal or above 0.20 in absolute value. In that case Sign was reported as -1 or 1. ES was considered small to very small between 0.20 and 0.01, and negligeable below 0.01 (Sawilowsky, 2009). ES Below 0.2 was reported with a Sign value of 0.

In addition to checking if differences between state means and the national means were notable in terms of the effect size, we also checked for statistical significance of the differences by checking if differences were large than the sampling and measurement errors in the estimated means. Statistical significance between a state mean and the national mean was computed based on the difference and the 95% confidence intervales (CIs) around each group Means, with each group CI lower and upper bounds being the Mean -/+ 1.96 * SE. When the Mean of the focal group was lower than the Mean of the reference group and the focal and reference CIs do not overlap is lower, difference was identified as statistically significantly lower; when the Mean of the focal group compared to the Mean of the reference group was higher and the two confidence intervals do not overlap, the difference was statistically significantly higher; when the CIs overlapped the means were not statistically significantly different.

10.2 Grade 3 Results

In this section, the scale score summary statistics for Grade 3 in Language and Mathematics are presented. All 599,026 students included in the analysis database contributed to these results.

10.2.1 State and District Performance

Figure 10.1 shows heatmaps of the average mean scale scores (Means) across state/UTs for Language, and Mathematics in Grade 3. The lighter shades indicate states performing on the higher end of the scale, while the darker shades represent states performing on the lower end.

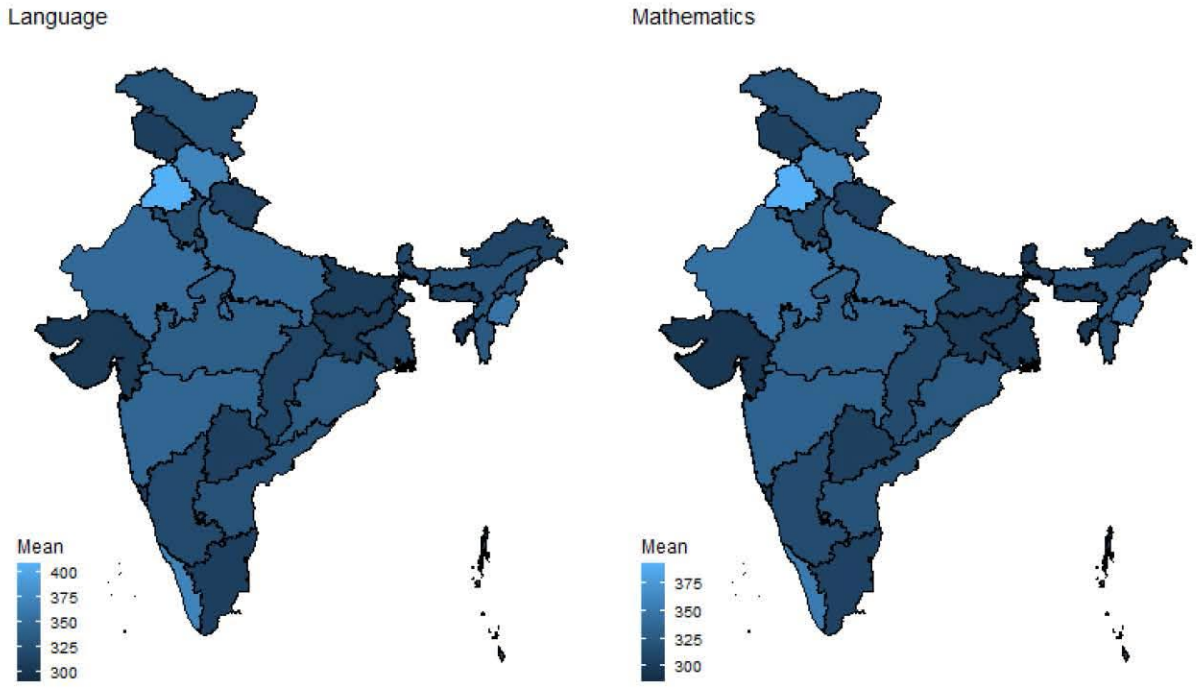

Figure 10.1 Heatmaps of Mean Scale Score per State/UT and Subject in Grade 3.

Table 10.1 reports the state and national language and mathematics summary statistics (N, Mean, SD, SE and Sign). For each state, the column "Sign" indicates whether a state mean is significantly different from the national mean. Value -1 indicates that the state significant underperforms the nation, 0 that there is no significant difference, and 1 that a state significant overperforms the nation. The last row in the table shows the national statistics.

In most cases, the same states that performed significantly lower, significantly different, or significantly higher in one subject did the same in the other.

A national mean of 330 in Language reflects relatively stronger performance, while the national mean of 323 in Mathematics also indicates a comparable level of achievement.

Figures 10.2 and 10.3 show boxplots of districts' average across states/UTs for Language and Mathematics in Grade 3. In these figures, the states/UTs are ordered according to their mean performance indicated by blue dots[3]. Each state's "box and whisker" show the districts' median (central bolder bar), the districts' 25th and 75th percentile values (lower and higher sides of the box), and the districts' 5 and 95 percentiles "whiskers". The extra dots appear when outlier values outside of the "whiskers" exist.

[3] Note that sample size and sampling weight differences are not considered in these plots, which can sometimes lead to unbalanced results. For example, in Dadra & Nagar Haveli and Daman & Diu, there is one small district that performs much higher than the two other, larger districts.

In addition to showing how states performed relative to each other, these figures show that the spread of district mean performance within each state is relatively narrow compared to the overall spread.

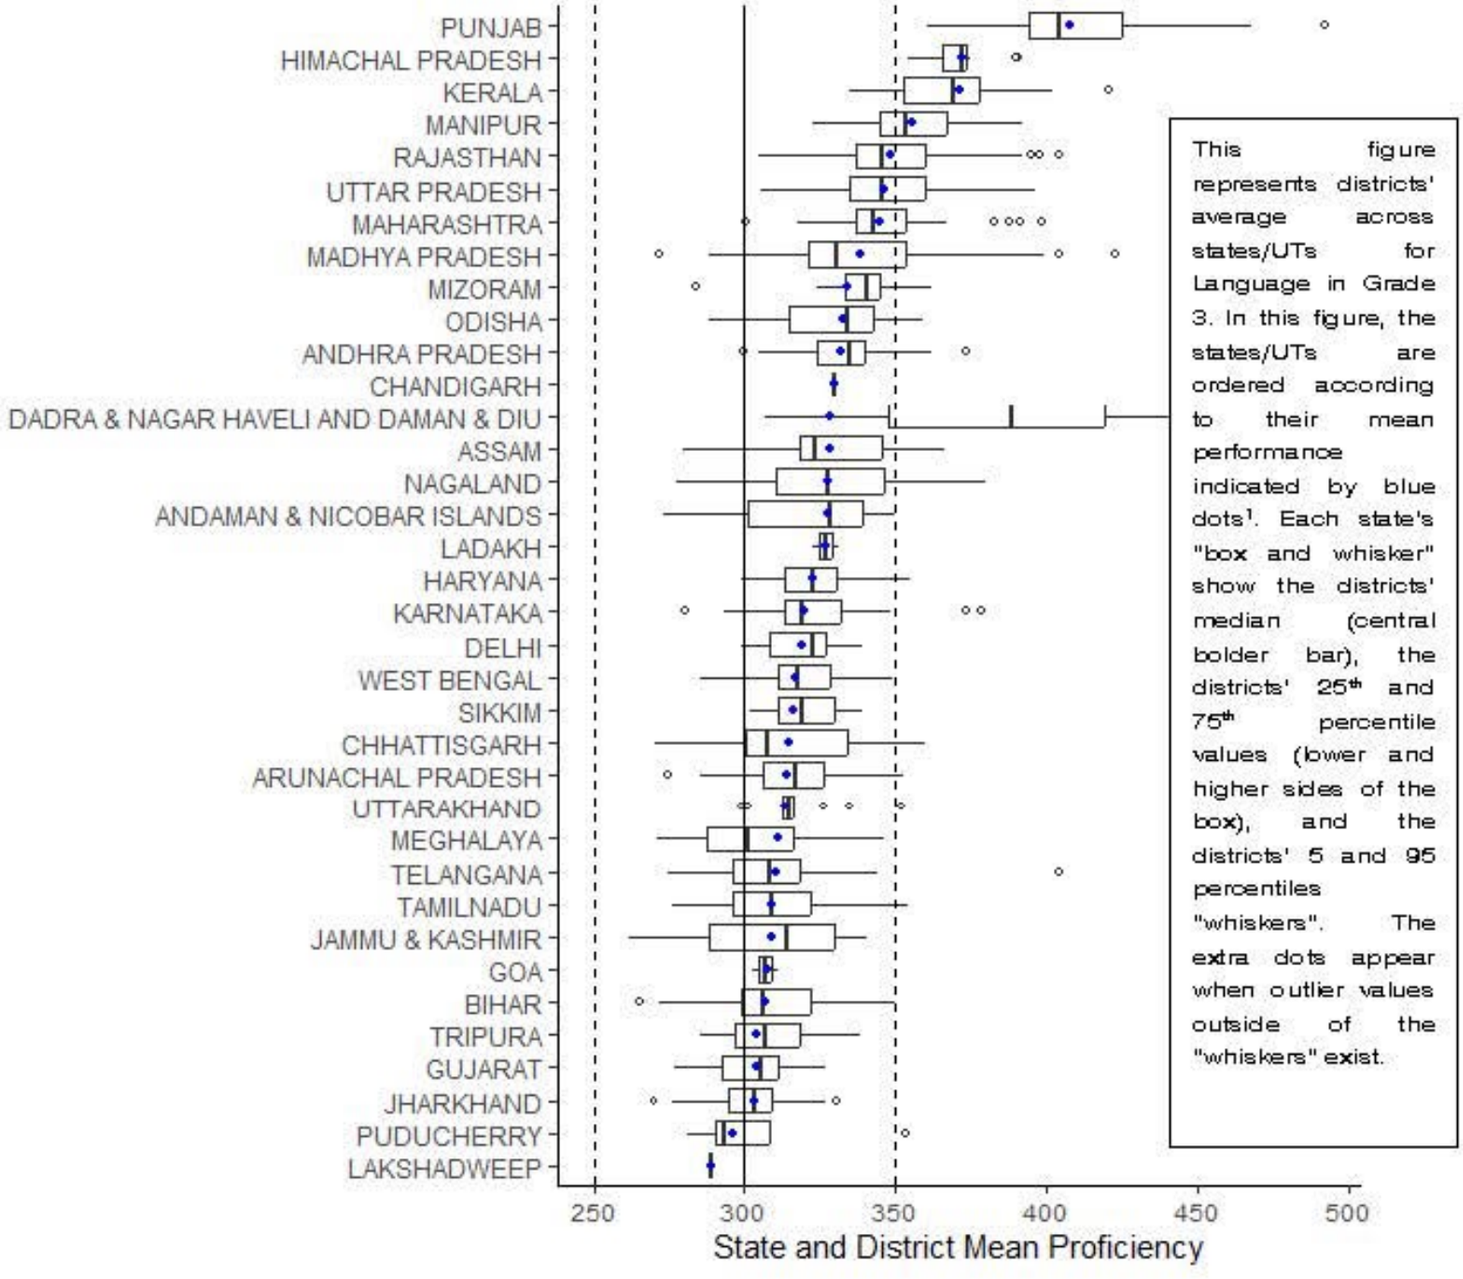

Figure 10.2 Boxplot of Mean District Performance per State/UT for Language in Grade 3.

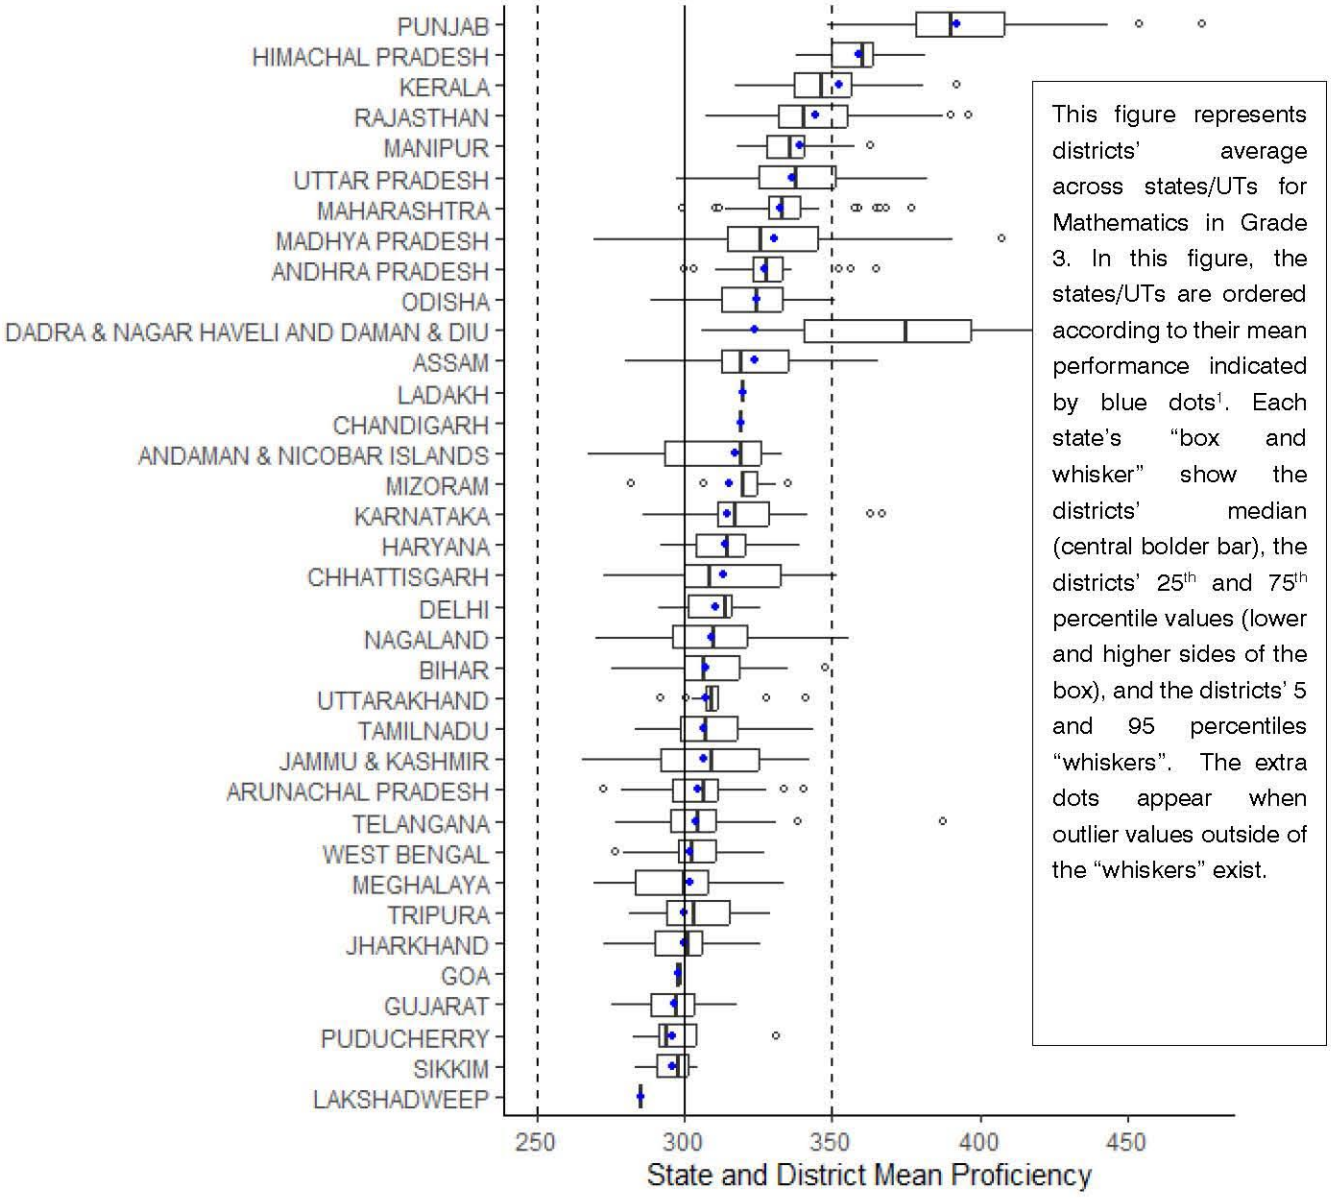

Figure 10.3: Boxplot of Mean District Performance per State/UT for Mathematics in Garde 3.

Performance by Key Variables

In this section, performance in Grade 3 is broken down by gender, area, school management, and social group.

Gender

Table 10.2 shows the states and the National summary statistics for boys and girls per state/UT in Grade 3 for Language and Mathematics. The column "Sign" indicates whether the gender difference is significantly different: -1 indicates states where boys perform significantly higher than girls, 0 indicates no significant difference between girls and boys, and 1 indicates a significant difference where girls outperform boys.

In most states for Language and in all states for Mathematics, no significant differences were observed. At the national level, the effect sizes (ESs) in favor of girls were small: -0.07 for Language and -0.03 for Mathematics. Results for samples of less than 100 students are not reported to ensure the accuracy of the reported results. Thus, there are no results presented for Lakshadweep in Table

10.2 because there are fewer than 100 boys (87) and girls (71) and as noted previously to ensure data quality only values for samples of 100 or more are reported.

Table 10.2 Gender-wise Performance per State/UT and Subject in Grade 3.

School Location

Table 10.3 shows the states and the National summary statistics for urban and rural schools per state/UT in Grade 3 for Language and Mathematics. The column "Sign" indicates whether the differences in school location are significant. Value -1 indicates that rural schools significantly

outperform urban schools, value 0 indicates no significant difference, and value 1 that urban schools significantly outperform rural schools.

In most states, no statistically significant differences between rural and urban schools were observed. At the national level, small effect sizes of -0.03 and -0.10 in favor of rural schools for Language and Mathematics were found. There are no rural data for Chandigarh and Delhi in Table 10.3. Conversely, there are no urban data for Lakshadweep.

Table 10.3 Area-wise Performance per State/UT and Subject in Grade 3.

School Management

Tables 10.4 and 10.5 show the states and the National summary statistics by school management type for Language and Mathematics. The significant values of the Mean differences were computed with the State Government used as reference. Thus, the significance results (Sign columns) are provided for State Government vs. Government Aided, State Government vs. Private Recognized, and State Government vs. Central Government schools.

At the state level, results show many cases where performance in Government-Aided, Private Recognized and Central Government schools is significantly lower than performance in State Government schools.

At the national level, State Government schools performed highest in Language and Mathematics. Compared to State Government schools, Central Government schools performed much lower, as indicated by large effect sizes (-0.25 and -0.30). Government Aided and Private Recognized schools also performed lower than State Government schools, but with smaller effect sizes (0.06 to 0.14).

Again, to ensure the accuracy of the results, results are not reported for multiple states for one or more school management types because the sample sizes were less than 100. For Government Aided Schools these states include Andaman & Nicobar Islands (n=45), Haryana (n=43), Himachal Pradesh (n=0), Jammu & Kashmir (n=13), Ladakh (n=24), Lakshadweep (n=0), Mizoram (n=0), Nagaland (n=0), Rajasthan (n=0), and Sikkim (n=0). The Lakshadweep sample did not include students from Private Schools and the sample sizes were also less than 100 for Central Government Schools for Andaman & Nicobar Islands (n=60), Dadra & Nagar Haveli and Daman & Diu (n=60), Ladakh (n=41), Lakshadweep (n=12), Mizoram (n=90), Nagaland (n=63), and Sikkim (n=35).

Social Group

Tables 10.6 and 10.7 show the states and the National summary statistics by social group for Language and Mathematics. The significant values of the Mean differences were computed with the General group used as reference. Thus, the significance results (Sign columns) are provided for General group vs. ST, General group vs. OBC, and General group vs. SC.

Most states show non-significant differences in both language and Mathematics, and some show ST performing significantly lower compared with the General group.

At the national level for Language and Mathematics, ST performed lower than the General group with effect sizes (ES) of -0.19 and -0.15. The OBC, and SC groups performed lower than the General group with small effect sizes, lower than 0.10 in absolute value for Language.

Again, Again, to ensure the accuracy of the results, results are not reported if there were less than 100 students in a group. This results in no data reported for General students for Ladakh (n=29), Lakshadweep (n=0), and Mizoram (n=40). It also results in no results for ST students for Chandigarh (n=3), Delhi (n=82), Goa (n=98), Haryana (n=90), and Puducherry (n=14), OBC students in Chandigarh (n=59), Ladakh (n=1), Lakshadweep (n=3), Meghalaya (n=0), and Mizoram (n=8) and SC students for Andaman & Nicobar Islands (n=11), Dadra & Nagar Haveli and Daman & Diu (n=43), Goa (n=30), Ladakh (n=3), Lakshadweep (n=0), and Mizoram (n=22).

10.3 Grade 6 Results

In this section, the scale score summary statistics for Grade 6 in Language, Mathematics, and The World Around Us are presented. All 663,195 students included in the analysis database contributed to these results.

10.3.1 State and District Performance

Figure 10.4 shows heatmaps of the mean scale scores (Means) across state/UTs for Language, Mathematics, and The World Around Us in Grade 6. The lighter shades indicate states performing on the higher end of the scale, while the darker shades represent states performing on the lower end.

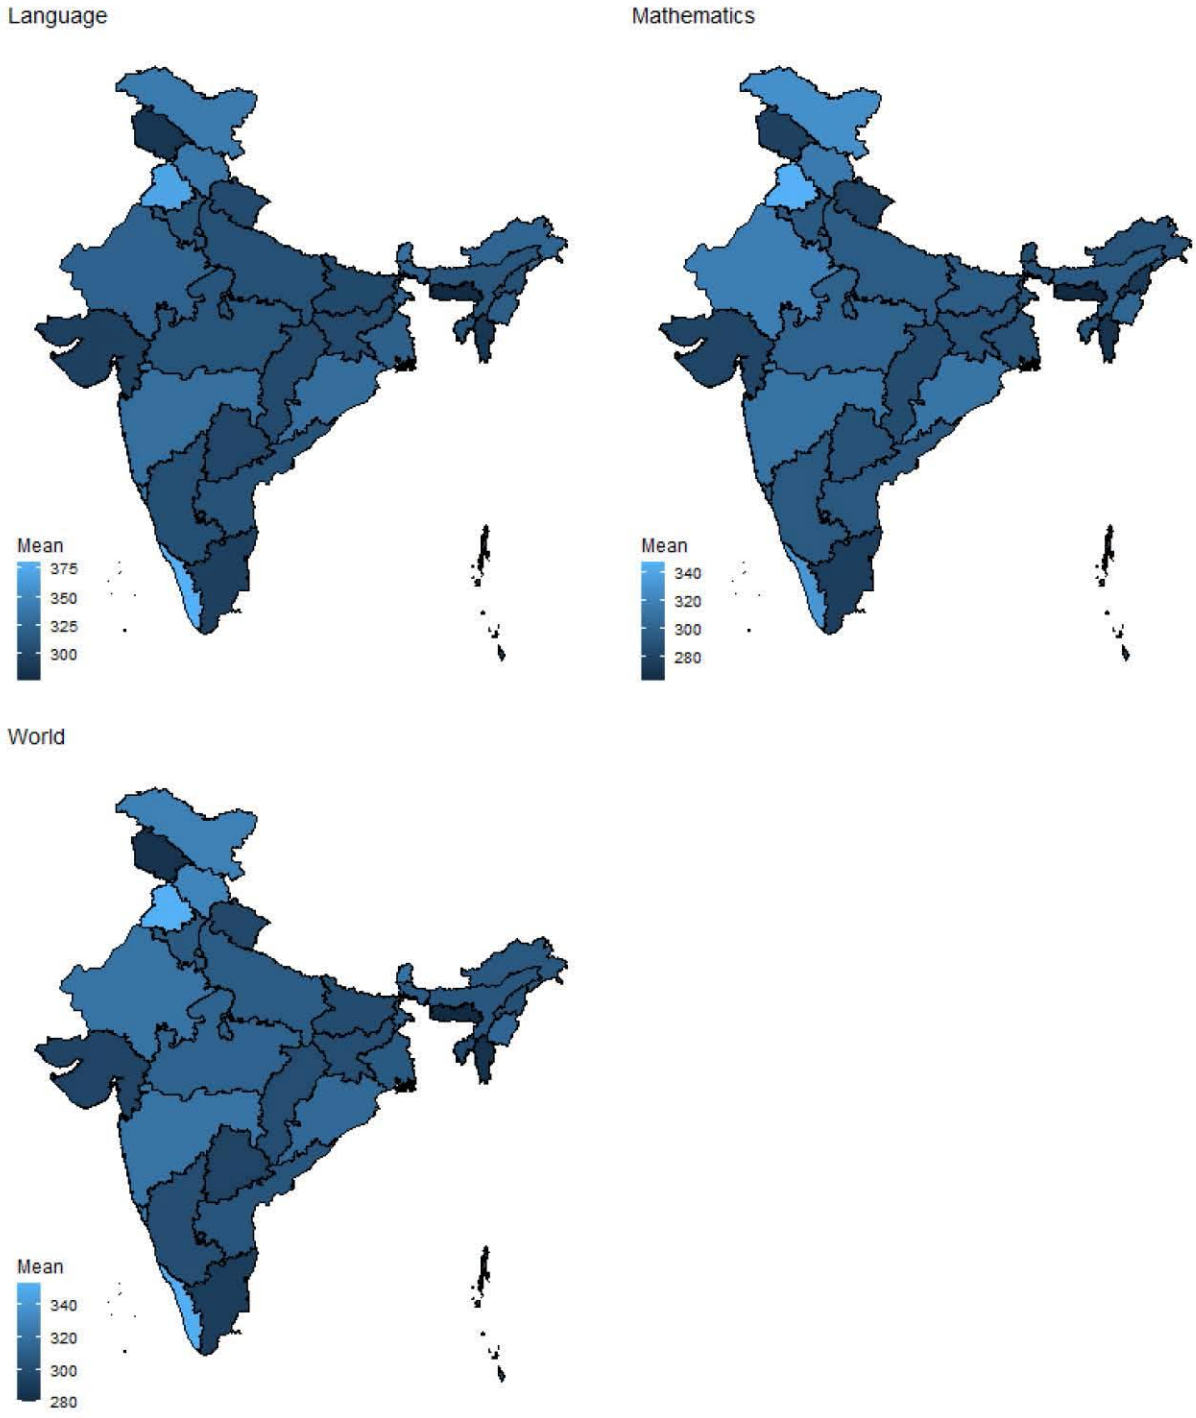

Figure 10.4 Heatmaps of Mean Scale Score per State/UT and Subject in Grade 6.

Table 10.8 reports the state and national Language, Mathematics and The World Around Us summary statistics (N, Mean, SD, SE and Sign). For each state, the column "Sign" indicates whether a state mean is significantly different from the national mean. Value -1 indicates that the state significant underperforms the nation, 0 that there is no significant difference, and 1 that a state significant overperforms the nation. The last row in the table shows the national statistics.

In most cases, the same states that performed significantly lower, significantly different, or significantly higher in one subject did the same in the other.

The national mean scores are 313 for Language, 298 for Mathematics, and 308 for The World Around Us.

Table 10.8 Scale Score Summary Statistics per State/UT for all Subjects in Grade 6.

Figures 10.5 to 10.7 show boxplots of districts' average across states/UTs for all subjects in Grade 6. In these figures, the states/UTs are ordered according to their mean performance indicated by blue dots[4]. Each state's "box and whisker" show the districts' median (central bolder bar), the districts' 25th and 75th percentile values (lower and higher sides of the box), and the districts' 5 and 95 percentiles "whiskers". The extra dots appear when outlier values outside of the "whiskers" exist.

In addition to showing how states performed relative to each other, these figures show that the spread of district mean performance within each state is relatively narrow compared to the overall spread.

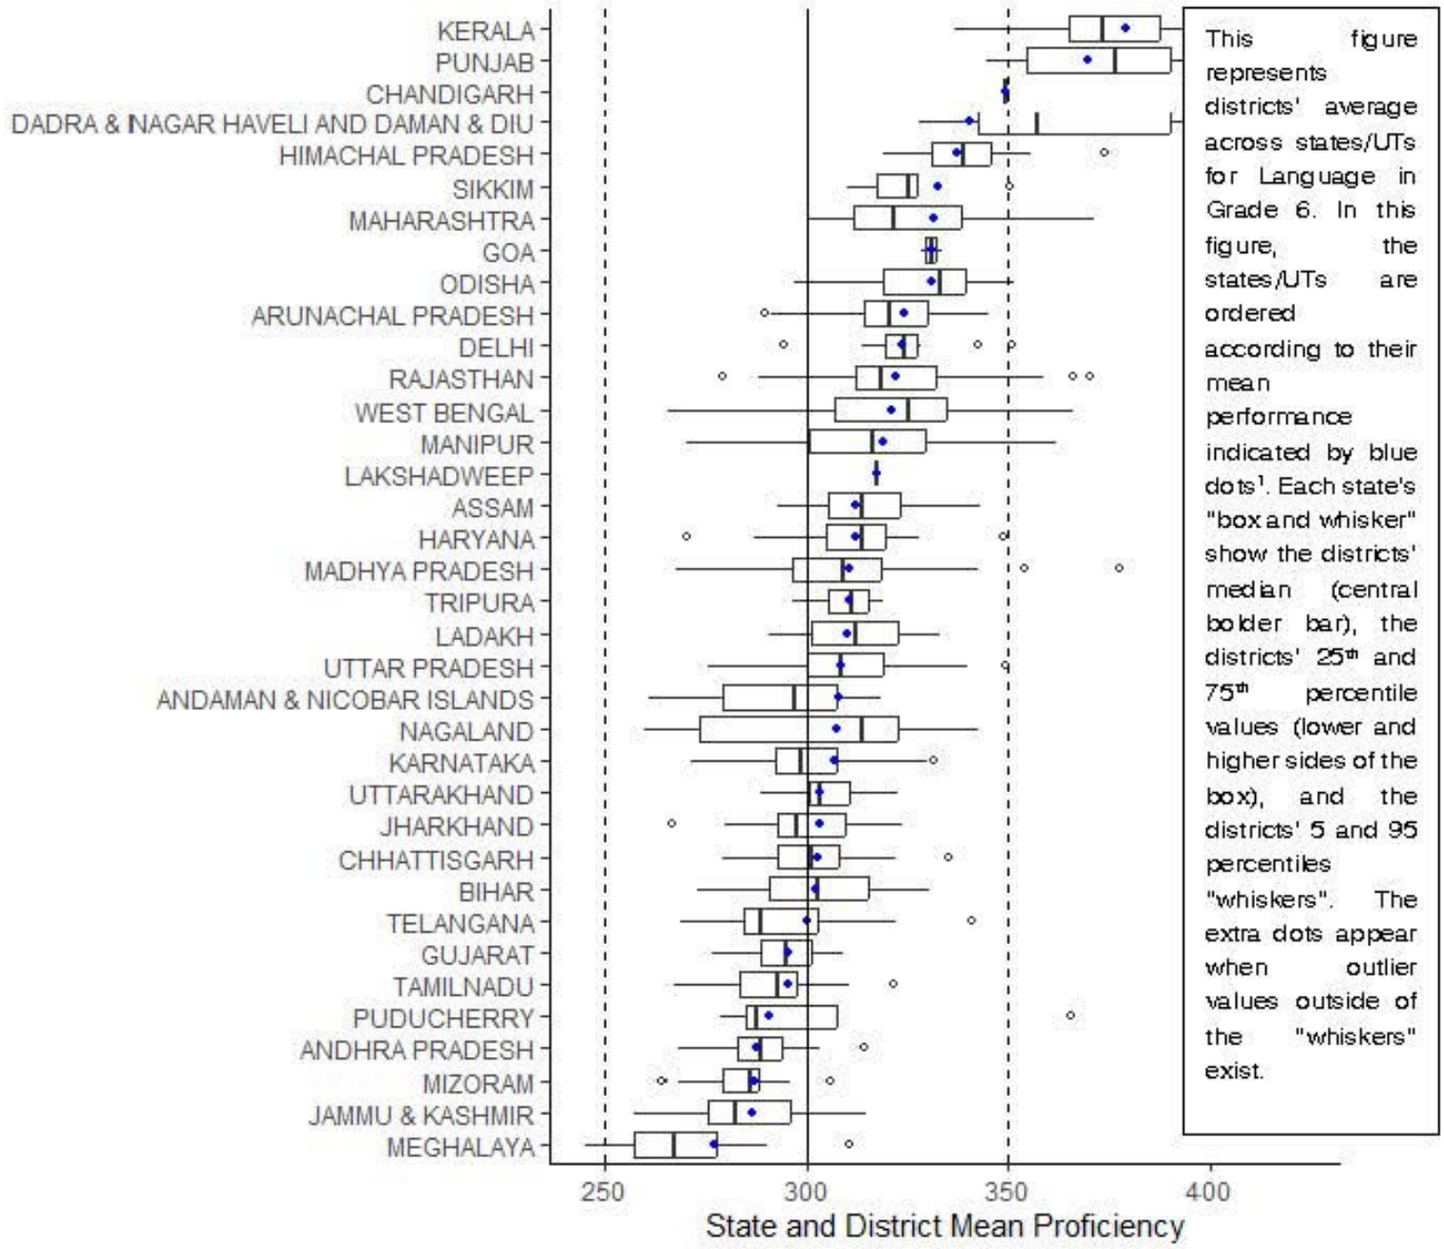

Figure 10.5: Boxplot of Mean District Performance per State/UT for Language in Grade 6.

[4] Note that sample size and sampling weight differences are not considered in these plots, which can sometimes lead to unbalanced results. For example, in Dadra & Nagar Haveli and Daman & Diu, there is one small district that performs much higher than the two other, larger districts.

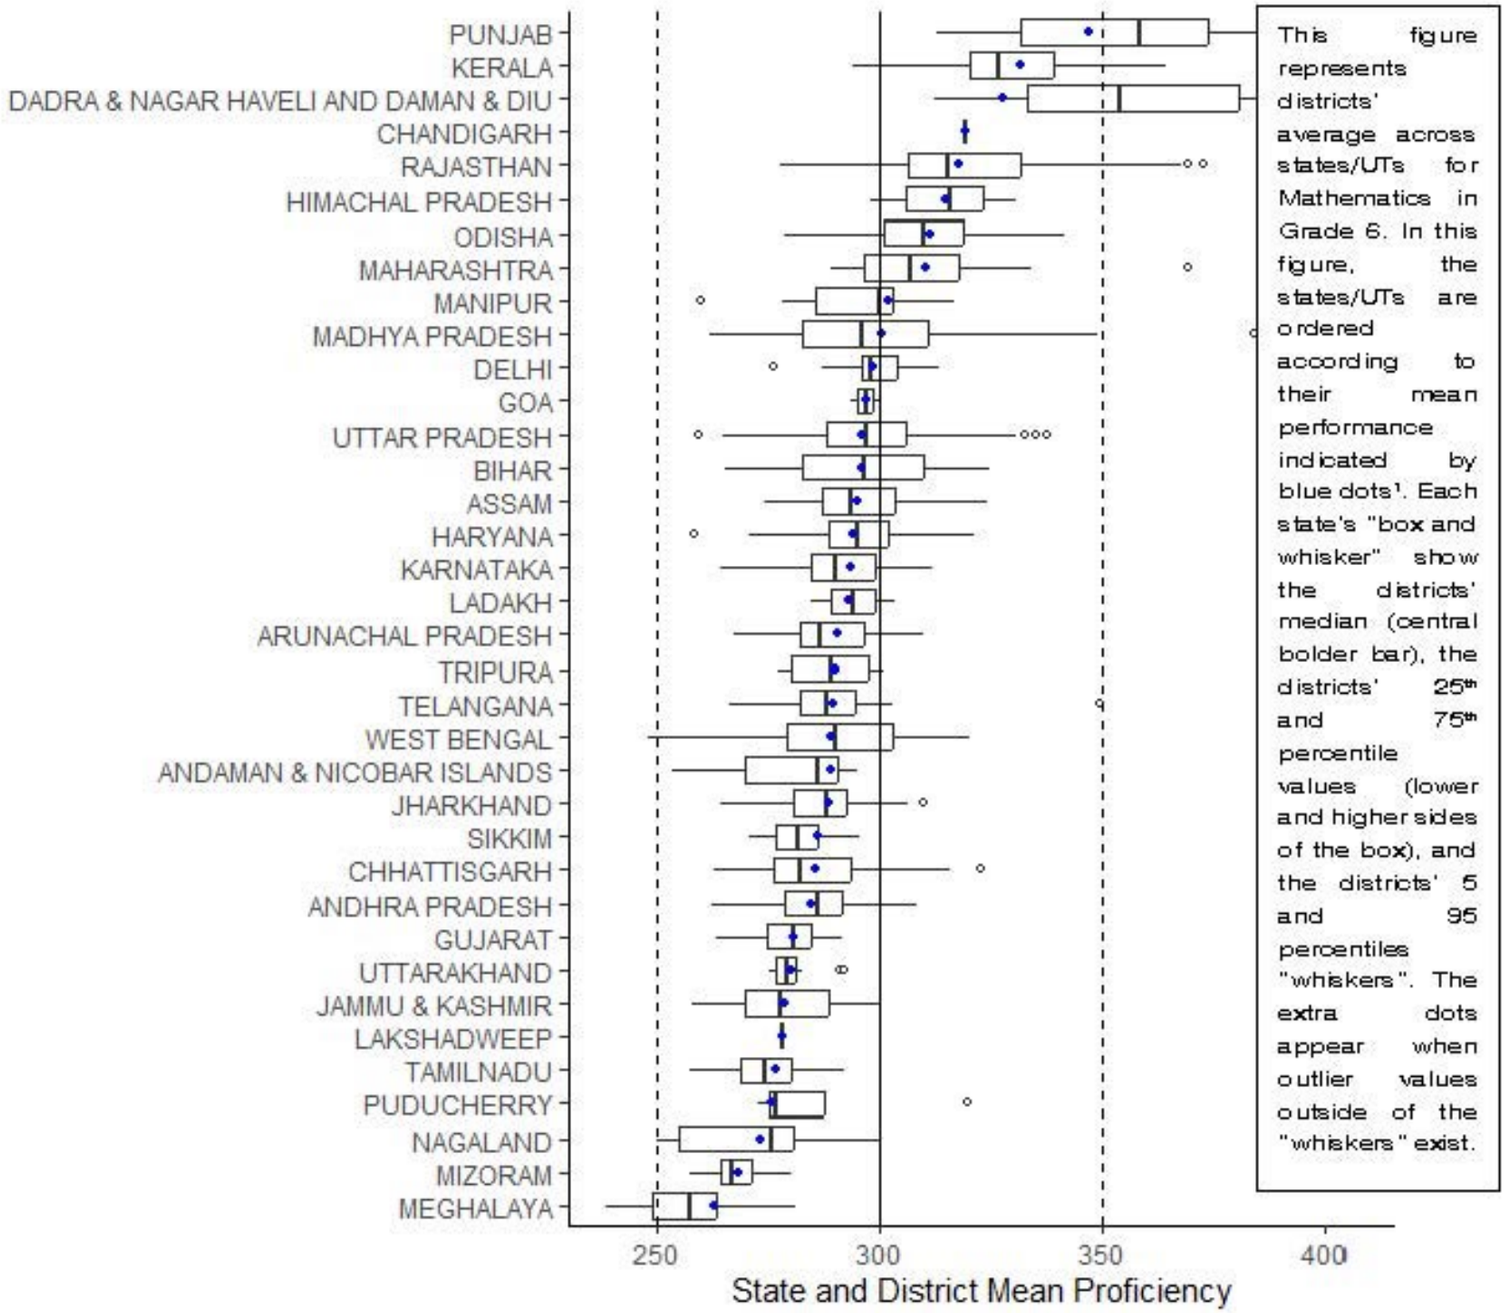

Figure 10.6 Boxplot of District Performance per State/UT for Mathematics in Grade 6.

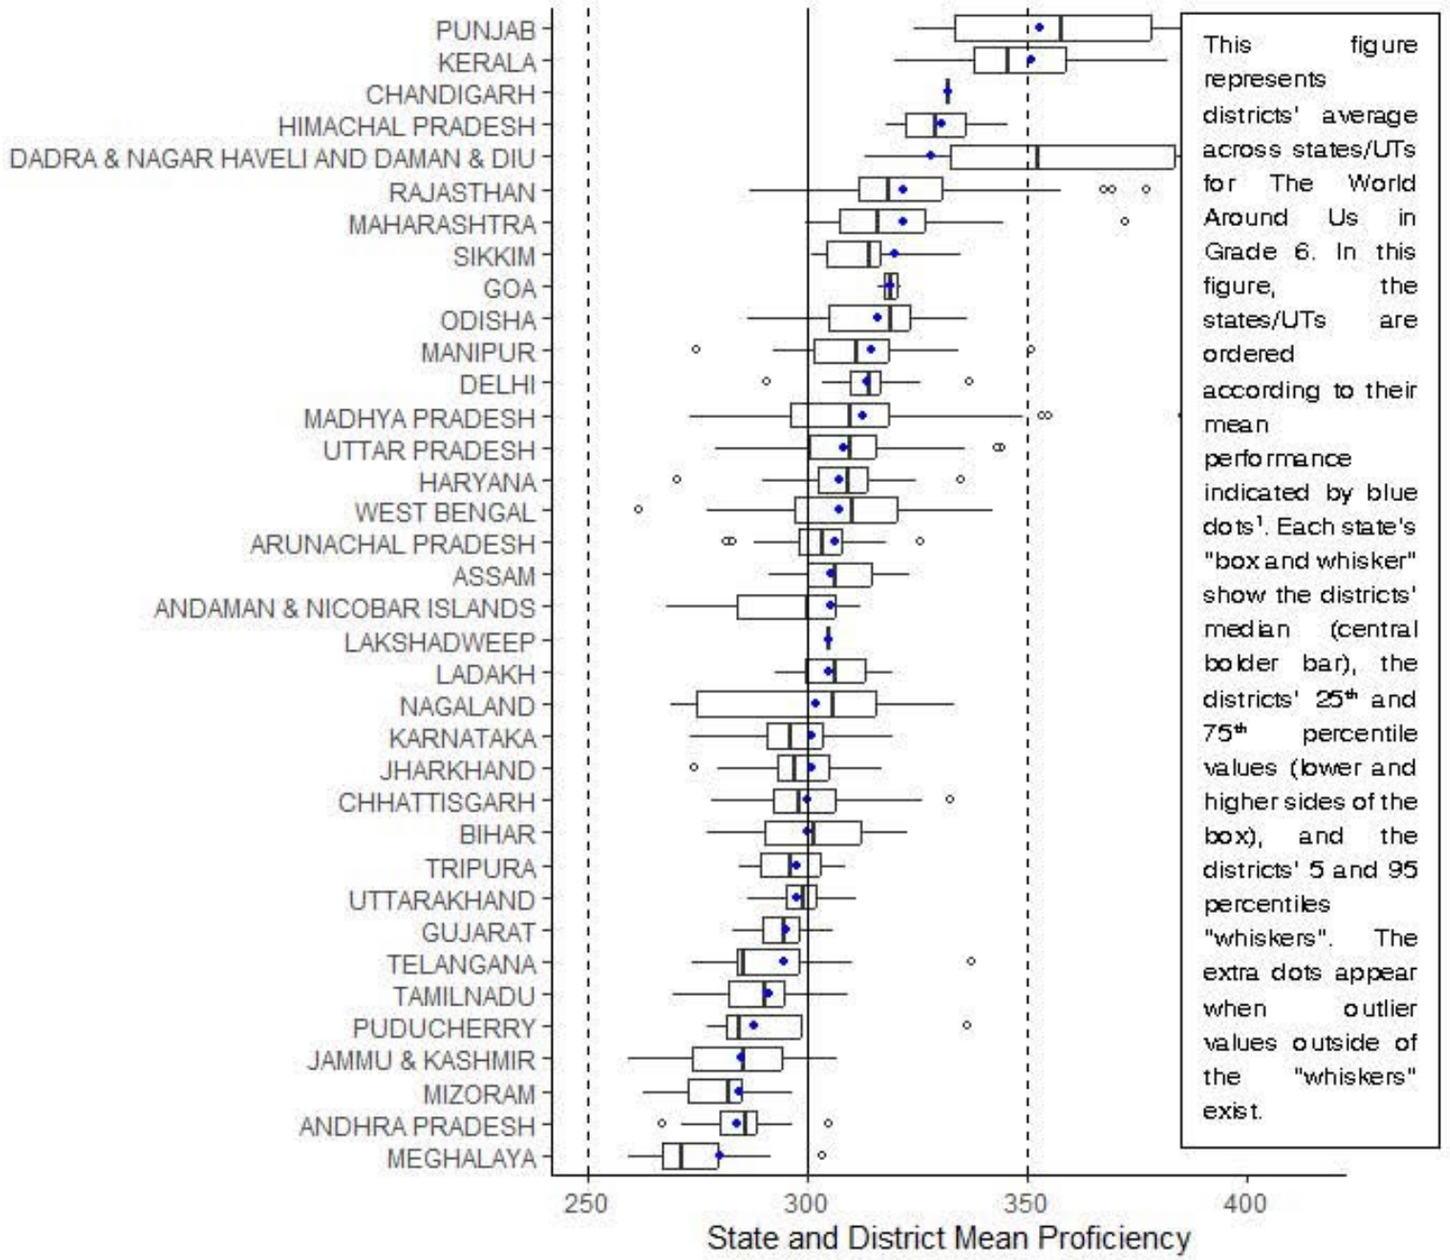

Figure 10.7 Boxplot of District Performance per State/UT for World Around Us in Grade 6.

10.3.2 Performance by Key Variables

In this section, performance in Grade 6 is broken down by gender, area, school management, and social group.

Gender

Table 10.9 shows the states and the National summary statistics for boys and girls per state/UT in Grade 6for all subjects. The column "Sign" indicates whether the gender difference is significantly different: -1 indicates states where boys perform significantly higher than girls, 0 indicates no significant difference between girls and boys, and 1 indicates a significant difference where girls outperform boys.

In most states girls perform significantly higher than boys in Language, otherwise differences are not significant. For Mathematics and The World Around Us, the differences are not significant in nearly all states.

At the national level, the effect sizes in favor of girls are small for Language (ES absolute value of -0.13). They are slightly in favor of boys in Mathematics (0.04), and slightly in favor of girls in for The World Around Us (-0.05).

Table 10.9 Gender-wise Performance per State/UT and Subject in Grade 6.

School Location

Table 10.10 presents the summary statistics for urban and rural schools across states/UTs, along with the national averages, for Language, Mathematics, and The World Around Us in Grade 6. The column "Sign" indicates whether the differences in school location are significant. Value -1 indicates that rural schools significantly outperform urban schools, value 0 indicates no significant difference, and value 1 that urban schools significantly outperform rural schools.

In many states and in all subjects, urban schools performed significantly higher than rural schools. At the national level, the effect sizes in favor of urban schools are small in Language and The World Around Us (0.14 and 0.11), and very small in Mathematics (0.06).

As with Grade 6, results for samples of less than 100 students are not reported to ensure the accuracy of the reported results. There are no rural data for Chandigarh and Delhi in Table 10.10. Conversely, there are no urban data for Lakshadweep.

School Management

Tables 10.11 to 10.13 show the states and the National summary statistics by school management type for all Grade 6 subjects. The significant values of the Mean differences were computed with the State Government used as reference. Thus, the significance results (Sign columns) are provided for State Government vs. Government-Aided, State Government vs. Private Recognized, and State Government schools vs. Central Government. Note that, results are not reported if there were less than 100 students in a group, which is indicated by the dashed lines in the tables.

In most of the states, Central Government and to a lesser degree Private Recognized schools performed significantly higher than State Government schools for all three subjects.

At the national level, large effect sizes (ESs) in favor of Central Government schools (0.63, 0.71 and 0.47 in Language, Mathematics and The World Around Us) and in favor of Private Recognized schools (0.28, 0.22 and 0.20) were observed. Government Aided schools performed lowest with small ESs compared to State Government schools (-0.04, -0.15 and -0.09).

There were no results reported for Andaman & Nicobar Islands (n=60), Haryana (n=59), Himachal Pradesh (n=0), Jammu & Kashmir (n=10), Ladakh (n=30), Lakshadweep (n=0), Nagaland (n=0), Rajasthan (n=0), and Sikkim (n=48) for Government Aided Schools because there were fewer than 100 students in these samples. In addition, the Lakshadweep sample did not include students from Private Schools and Central Government Schools so the results for these groups are also not reported.

Social Group

Tables 10.14 to 10.16 show the states and the national summary statistics by social group for all Grade 6 subjects. The significant values of the Mean differences were computed with the General group used as reference. Thus, the significance results (Sign columns) are provided for General group vs. ST, General group vs. OBC, and General group vs. SC.

Most states show significant school mean differences in favor of the General group over ST, OBC and SC in all subjects.

At the national level, in all subjects, effect sizes (ESs) are large: -0.29 to -0.44 in Language, -0.15 to -0.40 in Mathematics, and -0.20 to -0.44 in The World Around Us.

Again, results are not reported if there were less than 100 students in a group. No result reported for General students in Ladakh (n=25), Lakshadweep (n=4), and Mizoram (n=73). It also shown in the table that, no data reported for ST students for Chandigarh (n=9) and Puducherry (n=16), OBC students in Chandigarh (n=63), Ladakh (n=2), Lakshadweep (n=6), and Mizoram (n=33) and SC students for Andaman & Nicobar Islands (n=9), Dadra & Nagar Haveli and Daman & Diu (n=81), Gao (n=43), Ladakh (n=4), Lakshadweep (n=1), and Mizoram (n=72).

10.4. Grade 9 Results

In this section, the scale score summary statistics for Grade 9 in Language, Mathematics, Science, and Social Science are presented. All 852,801 students included in the analysis database contributed to these results.

10.4.1 State and District Performance

Figure 10.8 shows heatmaps of the mean scale scores across (Means) state/UTs for Language, Mathematics, Science, and Social Science in Grade 9. The lighter shades indicate states performing on the higher end of the scale, while the darker shades represent states performing on the lower end.

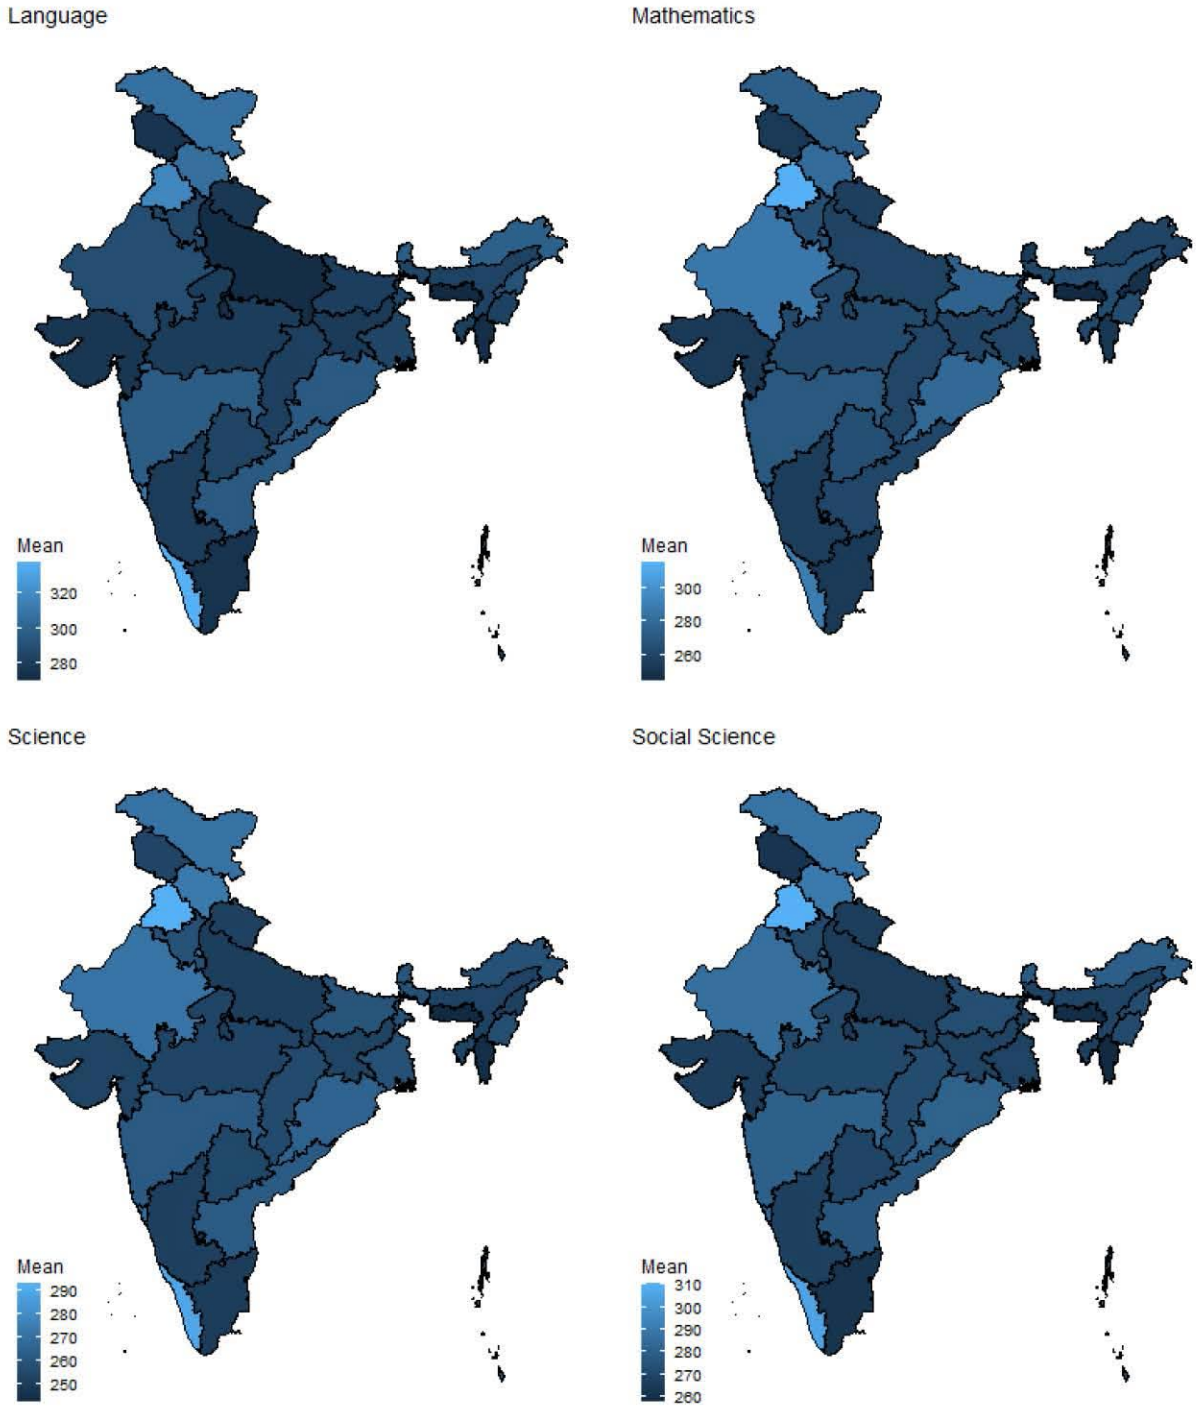

Figure 10.8 Heatmaps of Mean Scale Score per State/UT and Subject in Grade 9.

Table 10.17 reports the state and national summary statistics (N, Mean, SD, SE and Sign) for all Grade 9 subjects. The column "Sign" indicates whether a state mean is significantly different from the national mean. Value -1 indicates that the state significant underperforms the nation, 0 that there is no significant difference, and 1 that the state significant overperforms the nation. The last row in the table shows the national statistics.

Significance (Sign) results show the pattern of significant average performance differences between each state and the national average. In most cases, the same states that performed significantly lower, significantly different, or significantly higher in one subject did the same in the other.

The national mean scores are 285 in Language, 266 in Mathematics, 258 in Science, and 273 in Social Science.

Table 10.17 Scale Score Summary Statistics per State/UT for all Subjects in Grade 9.

Figures 10.9 to 10.12 show boxplots of districts' average across states/UTs for all subjects in Grade 9. In these figures, the states/UTs are ordered according to their mean performance indicated by blue dots[5]. Each state's "box and whisker" show the districts' median (central bolder bar), the districts' 25th and 75th percentile values (lower and higher sides of the box), and the districts' 5 and 95 percentiles "whiskers". The extra dots appear when outlier values outside of the "whiskers" exist.

Generally, the spread of district performance within each state is relatively narrow, indicating that district performance of within states is more similar than district performance across all states.

[5] Note that sample size and sampling weight differences are not considered in these plots, which can sometimes lead to unbalanced results. For example, in Dadra & Nagar Haveli and Daman & Diu, there is one small district that performs much higher than the two other, larger districts.

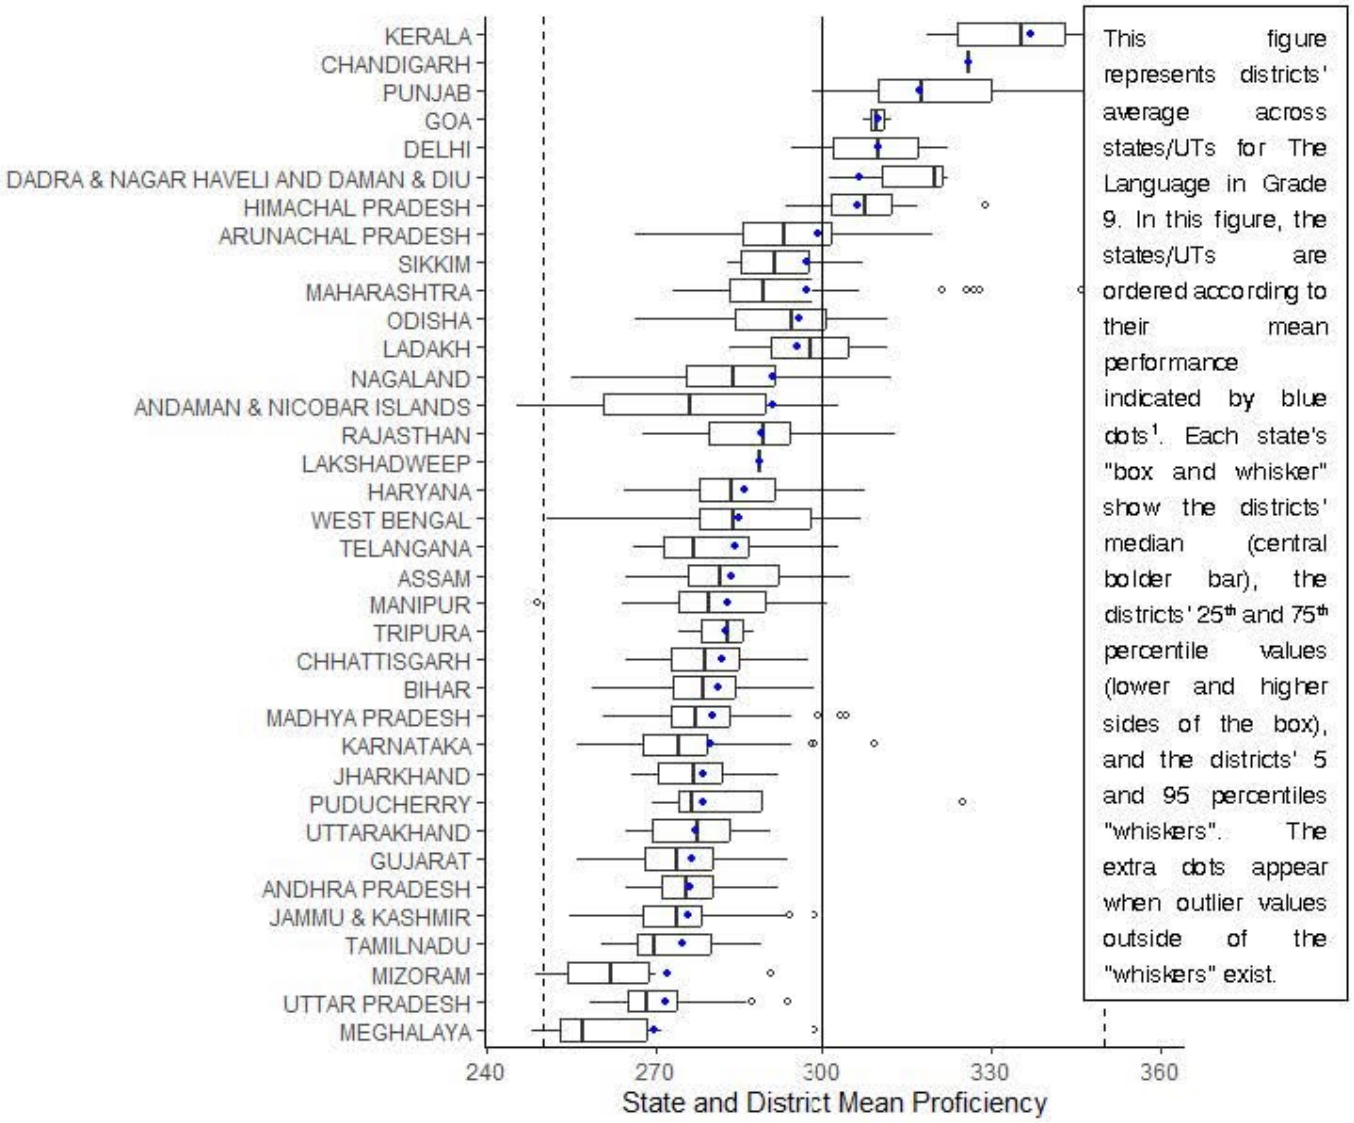

Figure 10.9 Boxplot of Mean District Performance per State/UT for Language in Grade 9.

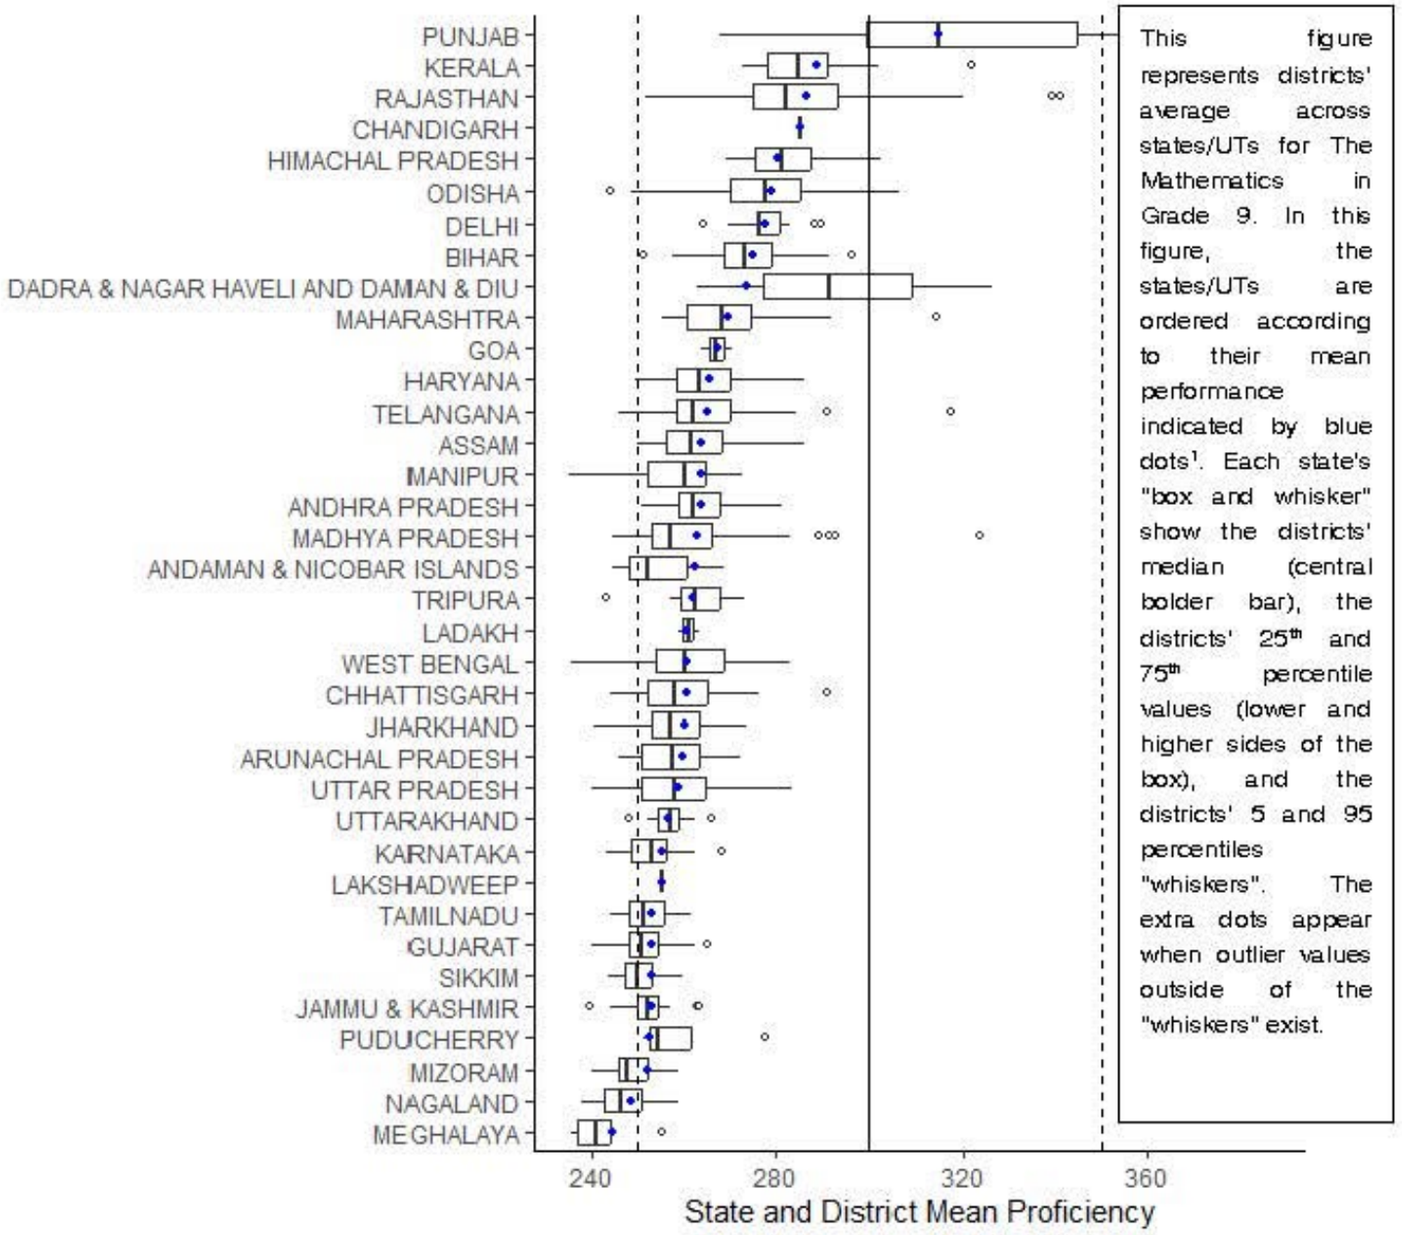

Figure 10.10 Boxplot of Mean District Performance per State/UT for Mathematics in Grade 9.

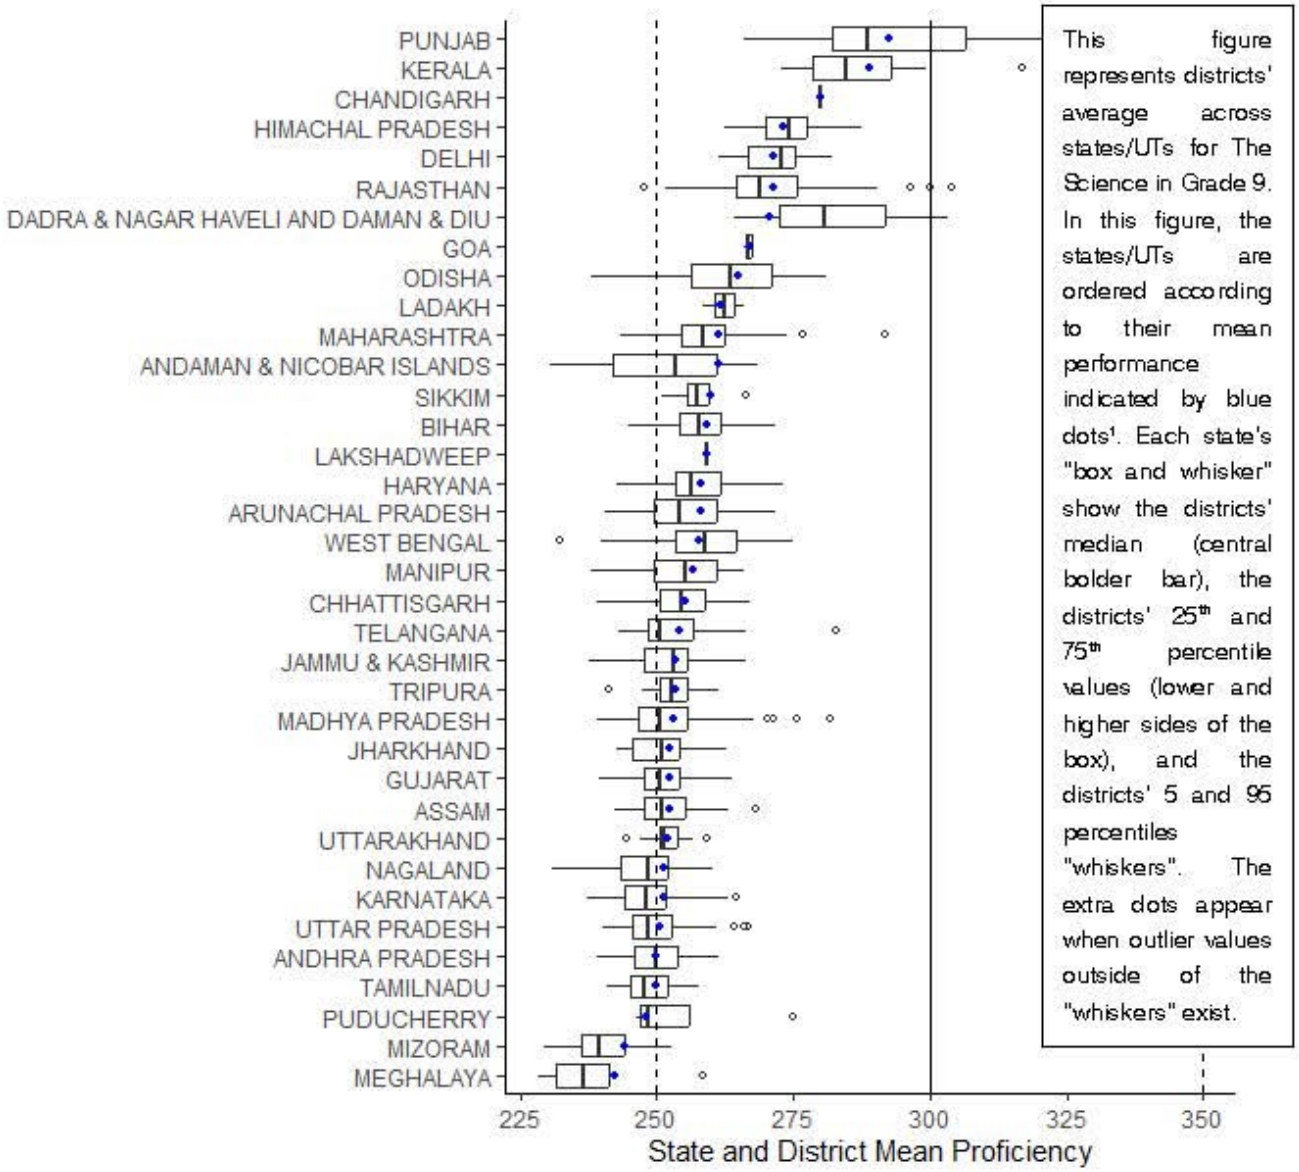

Figure 10.11 Boxplot of Mean District Performance per State/UT for Science in Grade 9.

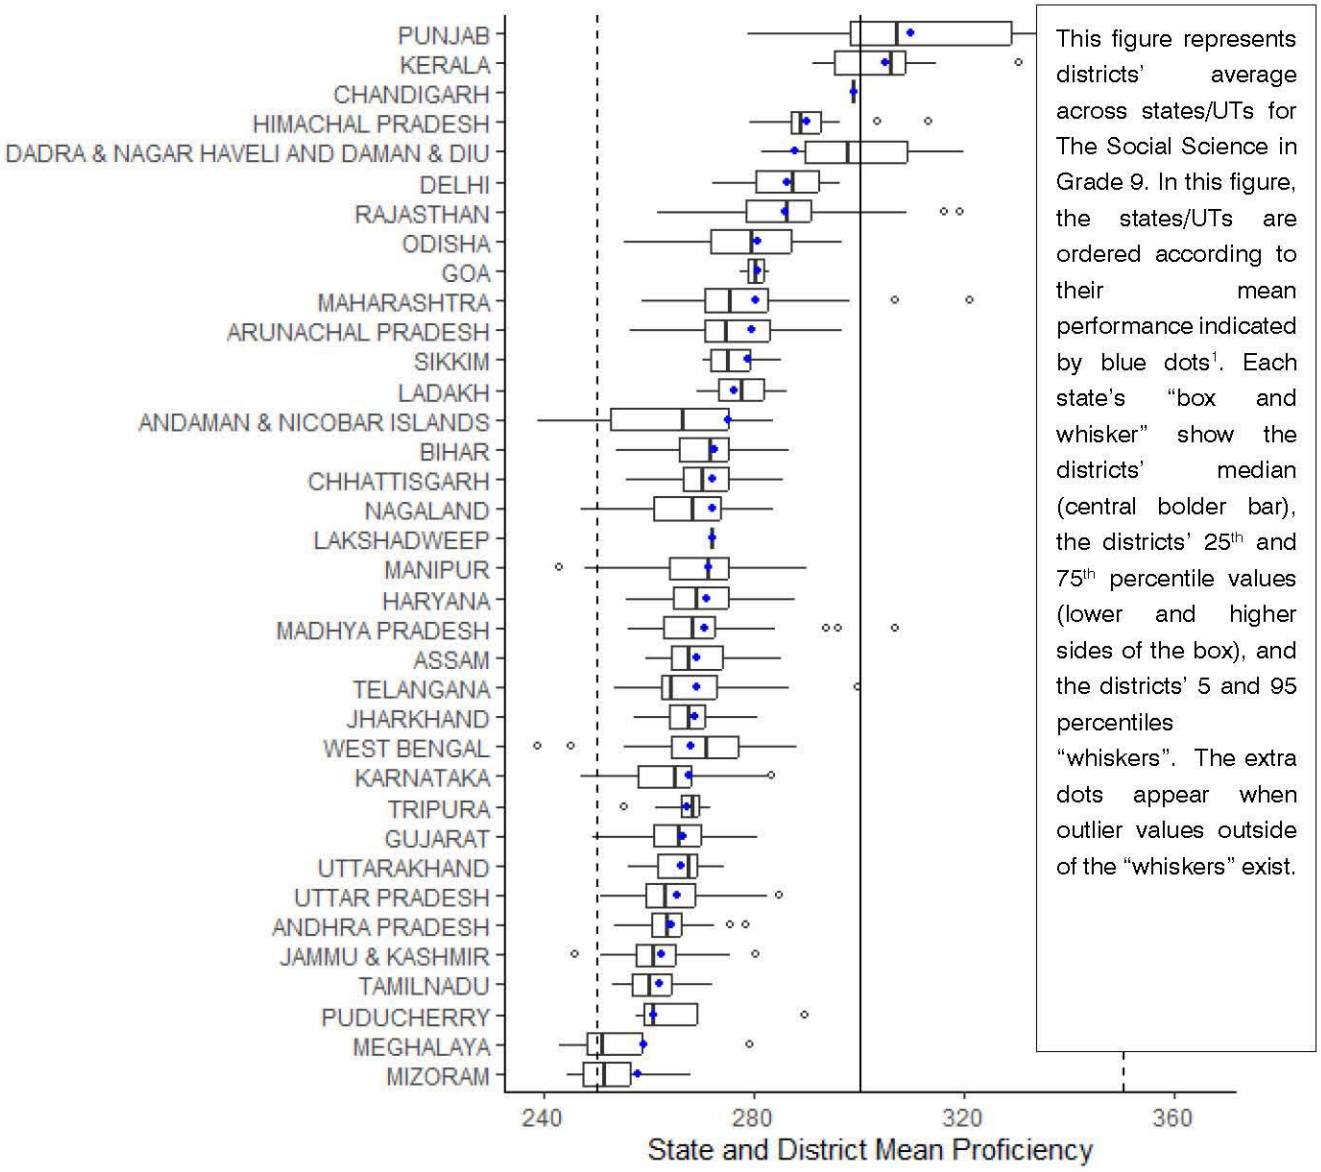

Figure 10.12 Boxplot of Mean District Performance per State/UT for Social Science in Grade 9.

10.4.2 Performance by Key Variables

In this section, performance in Grade 9 is broken down by four key variables. These are gender, area, school management, and social group.

Gender

Table 10.18 shows the states and the National summary statistics for boys and girls per state/UT in Grade 9 for all subjects. The column "Sign" indicates whether the gender difference is significantly different: -1 indicates states where boys perform significantly higher than girls, 0 indicates no significant difference between girls and boys, and 1 indicates a significant difference where girls outperform boys.

For Language, girls perform significantly higher than boys in most states/UTs, otherwise differences are not significant. For Mathematics, Science and Social Science, the differences are not significant in most state/UTs.

At the national level, the effect sizes in favour of girls are small for Language (-0.12), they are smaller in favour of boys in Mathematics (0.08), not different in science, and small in favour of girls in Social Science (-0.09).

Table 10.18 Gender-wise Performance per State/UT and Subject in Grade 9.

	Mean Language			Mean Mathematics			Mean Science			Mean Social Sciences

School Location

Table 10.19 shows the states and the National summary statistics for different school locations (rural vs. urban) for Language, Mathematics, Science and Social Science in Grade 9. The column "Sign" indicates whether the differences in school location are significant. Value -1 indicates that rural schools significantly outperform urban schools, value 0 indicates no significant difference, and value 1 that urban schools significantly outperform rural schools.

In all subjects, urban schools perform significantly higher in most states. At the national level, the effect sizes in favour of urban schools are relatively large in all subjects (0.16 to 0.26). These differences are larger than in Grade 6.

There are no rural data and therefore no result reported for Chandigarh and Delhi in Table 10.19. Conversely, there are no urban data for Lakshadweep.

Table 10.19 School-location-wise Performance per State/UT and Subject in Grade 9.

State/UT	Mean Language			Mean Mathematics			Mean Science			Mean Social Sciences

School Management

Tables 10.20 to 10.23 show the mean scale scores and associated standard errors (SE) per school-management type per state/UT in Grade 9 for each of the four subjects. The significant values of the Mean differences were computed with the State Government used as reference. Thus, the significance results (Sign columns) are provided for State Government vs. Government-Aided, State Government vs. Public Recognized, and State Government vs. Central Government.

In most states and in all subjects, Central Government and Private Recognized schools performed significantly higher than State Government schools. Results were mixed for Government Aided schools.

At the national level and in all subjects, large effect sizes (ESs from 0.34 to 0.94) in favor of Central Government and to a lesser degree Private Recognized school. Government Aided schools performed lowest with small to negligeable effect sizes compared to State Government schools (-0.01 to 0.04).

As with Grades 3 and 6, results for samples of less than 100 students are not reported. Thus, no results are reported for Government Aided Schools for Andaman & Nicobar Islands (n=60), Haryana (n=86), Himachal Pradesh (n=0), Jammu & Kashmir (n=0), Ladakh (n=23), Lakshadweep (n=0), Nagaland (n=0), Rajasthan (n=0), and Sikkim (n=88) because the samples are too small. The Lakshadweep sample does not include any students from Private Schools and 45 students from Central Government Schools, so these results are also not reported.

Table 10.20 School-management-wise Performance per State/UT in Language for Grade 9.

Social Group

Tables 10.24 to 10.27 show the states and the national summary statistics by social group for all Grade 9 subjects. The significant values of the Mean differences were computed with the General group used as reference. Thus, the significance results (Sign columns) are provided for General group vs. ST, General group vs. OBC, and General group vs. SC.

Most states show significant school mean differences in favor of the General group over ST, OBC and SC in all subjects.

At the national level, in all subjects, effect sizes (ESs) in favor of the General group are large (-0.19 to -0.54), with ST performing the lowest.

Because results are not reported if there were less than 100 students in a group, no results are reported for General students for Ladakh (n=39), Lakshadweep (n=3), and Mizoram (n=77). Also no results are reported for ST students for Chandigarh (n=11) and Puducherry (n=x12), OBC students for Chandigarh (n=90), Ladakh (n=8), Lakshadweep (n=4), and Mizoram (n=x60) and SC students for Andaman & Nicobar Islands (n=13), Dadra & Nagar Haveli and Daman & Diu (n=78), Goa (n=98), Ladakh (n=7), Lakshadweep (n=0), and Mizoram (n=63).

Chapter 11: Performance standards and summary statistics

In large-scale survey assessments, proficiency standards serve as a vital framework for interpreting student achievement. Performance standards play a crucial role in interpreting large-scale assessment outcomes, providing a systematic framework to gauge how well students have met the intended learning goals. In the context of PARAKH Rashtriya Sarvekshan 2024, which assesses student competencies across the foundational, preparatory, and middle stages of education, the establishment of robust performance standards is essential to ensure the data generated is both meaningful and actionable.

Previous rounds of the National Achievement Survey (NAS) in 2017 and 2021 employed the Bookmark method to set performance levels and corresponding cut scores. These efforts successfully categorized student achievement and informed policy and pedagogical interventions. With the implementation of the National Education Policy (NEP) 2020 and the introduction of the National Curriculum Frameworks for the Foundational Stage and School Education (NCF-FS and NCF-SE), the assessment landscape has significantly evolved. This required a redefinition of performance standards to align with revised curricular goals and competency-based learning expectations.

PARAKH Rashtriya Sarvekshan 2024 reflects this transition by adopting a revised assessment framework, necessitating the development of new Performance Level Descriptors (PLDs) and cut scores. To facilitate this process, a series of national-level standard setting workshops were conducted in March 2025 for each stage of education:

- Foundational Stage: 5th–7th March 2025
- Preparatory Stage: 10th–12th March 2025
- Middle Stage: 17th–19th March 2025

This chapter outlines the technical approach to standard setting undertaken for PARAKH Rashtriya Sarvekshan 2024, with emphasis on the conceptual framework, application of the Bookmark method, and the outcomes of expert panel discussions held during the workshops.

11.1. Performance Standards

Performance standards are clearly defined benchmarks that specify the level of knowledge and skills students are expected to demonstrate at various stages of their schooling. These standards help to interpret what students know and can do, thereby linking curriculum goals to measurable student competencies.

In the context of PARAKH Rashtriya Sarvekshan 2024, performance standards are aligned with the stages outlined in the National Curriculum Frameworks—Foundational (NCF-FS, 2022), Preparatory, and Middle Stages (NCF-SE, 2023). These standards provide a guideline how student performance is assessed and interpreted across grades.

For example, while a content standard for the Middle Stage might state that students should be able to analyze and interpret literary texts, a performance standard would clarify the degree of mastery required to demonstrate this ability—such as basic, proficient, or advanced.

Performance standards, on the other hand, define how well students must demonstrate the knowledge and skills outlined in the content standards. These are expressed through:

- **Performance Level Descriptors (PLDs) –** qualitative descriptions of student performance at varying levels of performance.
- **Cut Scores –** numerical thresholds on the assessment scale that classify students into performance levels.

Together, PLDs and cut scores enable educators, policymakers, and stakeholders to:

- Understand how well students are learning,
- Set realistic learning goals,
- Identify students who need additional support or enrichment,
- Track progress over time, and
- Make informed decisions for instruction, resource allocation, and policy reform.

Sample performance standards aligned with a content standard look like the following table:

Table 11.1: Example of Performance Standard aligned with content standard

Content Standard	Performance Standards	Basic	Proficient	Advanced
Students at the end of Middle stage should be able **read**, **comprehend**, and **respond** to complex texts independently	Read	Simple texts	Grade appropriate texts	Complex texts
	Comprehend	Partially	Fully	Extensively
	Respond	Explicit questions	Implicit questions with no conflicting information	Implicit questions with conflicting information

Establishing performance standards involves answering two key questions:

- **" What does it mean to be proficient?"** – Addressed through the Minimum Level of Competency (MLC).
- **" What score can be regarded as proficient?"** – Determined through the cut score setting process.

11.2 Setting Performance Levels

The process of establishing performance levels involved a structured approach to linking test scores with conceptual definitions of student achievement. The methodology combined the analysis of actual test items with expert judgment to define meaningful distinctions in student performance. This dual approach ensured that test scores generated through the assessment were aligned with Performance Level Descriptors (PLDs) using a systematic process of scoring and expert review.

The performance levels were developed in alignment with the National Curriculum Framework (NCF) and were broadly categorized into four levels: **Below Basic, Basic, Proficient, and Advanced**. These general definitions provided a foundation for developing more detailed, subject-specific performance descriptors.

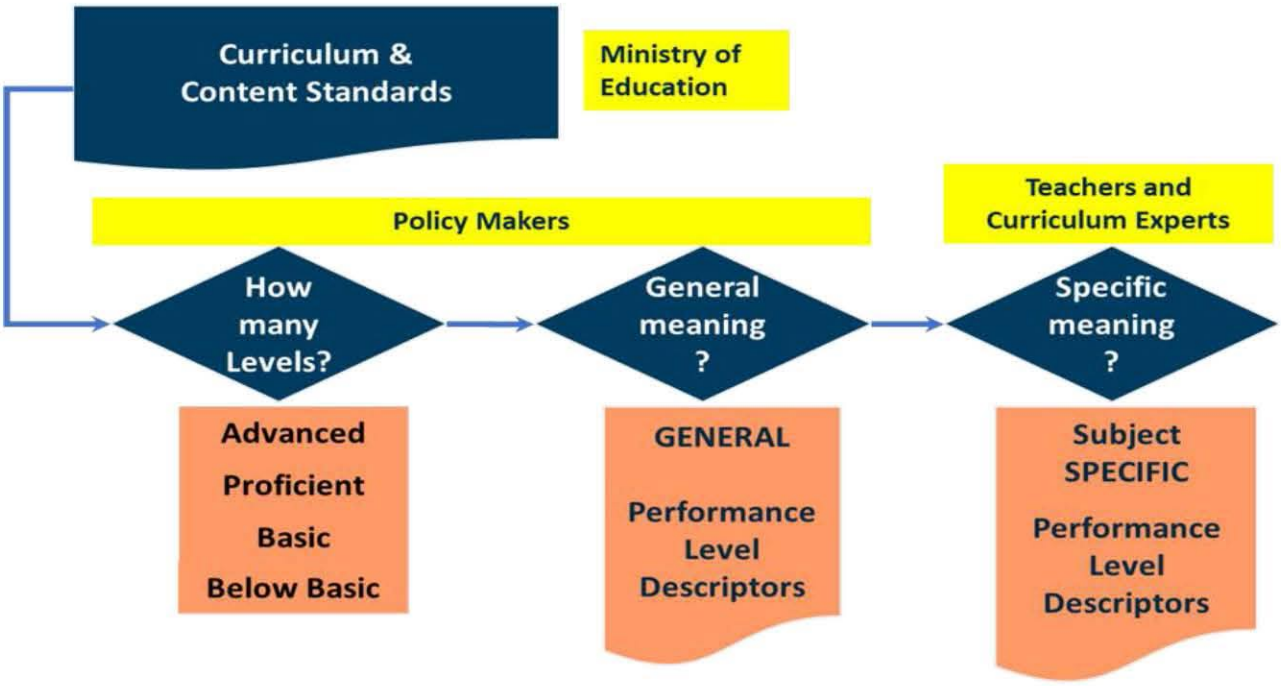

Figure 11.1. Four performance levels

Once the levels were established, their general meanings were developed, leading to the creation of general performance level descriptors. These were then further refined into subject-specific performance level descriptors through collaboration with teachers and curriculum experts, ensuring consistency with subject-area expectations.

Figure 11.2 describes the process that was followed for setting performance levels. The process began with the curriculum and content standards, guided by inputs from the National Curriculum Framework (NCF). The first step involved determining the number of performance levels, which were defined as Advanced, Proficient, Basic, and Below Basic.

Figure 11.2. Process for setting performance levels

11.2.1 General Definitions of Performance Levels

Table 11.2: General definitions for each of the performance levels

Below Basic	Basic	Proficient	Advanced
• Students at this level were at the early stages of development regarding the curriculum standards.	• Students demonstrated minimum competency in relation to curriculum learning expectations.	• Students at this level had mastered most of the learning competencies and could work independently with minimal supervision.	• Students displayed exceptional mastery of the curriculum content and beyond.
• They had not acquired sufficient knowledge or skills to be considered minimally successful in meeting curriculum expectations.	• They were able to follow simple instructions and apply basic rules to meet expectations.	• They demonstrated systematic problem-solving skills and communicated ideas clearly.	• They worked independently and exhibited high levels of analytical, reflective, and critical thinking.

• They required guidance at every stage of learning, had limited judgment, and needed encouragement and structured support.	• They often had good ideas that lacked coherence and required support at various stages of learning.	• They could connect concepts and apply their understanding to new situations with minimal guidance.	• They integrated complex concepts to generate new knowledge and solve advanced problems.
• They showed limited understanding of concepts and struggled to apply basic reasoning.	• They could solve straightforward problems using basic logic and expressed ideas in simple language.	• Their performance reflected analytical thinking and the ability to interpret information effectively.	• Their communication was marked by creativity, coherence, and sound judgment.

11.2.2 Development of Detailed Performance Level Descriptors

Once the general definitions were agreed upon, the team proceeded to develop detailed descriptors for each performance level. These were designed to give stakeholders a clearer picture of what students at each level know and are able to do, and what they need to advance to the next level.

Key considerations in this process included:

- Ensuring descriptors were aligned with curriculum content standards.
- Using the *Proficient* level as the starting point and adjusting expectations downward for *Basic* and upward for *Advanced*.
- Describing the minimum knowledge, skills, and abilities (KSAs) necessary to qualify for each level.
- Avoiding detailed definitions for the *Below Basic* level, which was treated more qualitatively.

Information used :

1. List of learning competencies
2. General definitions of performance levels
3. Templates for drafting detailed performance descriptors

11. 2.3 Procedure for Developing Detailed Descriptors

A structured workshop format was followed, including the following steps:

1. **Initial Analysis**
    a. The facilitator presented each competency on screen and initiated a discussion on:
        i. The core concepts involved

ii. The knowledge, skills, and abilities being assessed

iii. Factors contributing to the difficulty of the competency

2. **Level Definition Discussions**

   a. Panelists discussed the expected KSAs for a *Proficient* student.

   b. They adjusted expectations downward to define the *Basic* level and upward to define the *Advanced* level.

3. **Finalization**

   a. Definitions were finalized based on panel consensus and approved for each competency.

   b. The process was repeated for all competencies in the subject areas.

This structured approach ensured that performance levels were both conceptually sound and practically relevant, reflecting curriculum goals while capturing meaningful distinctions in student learning.

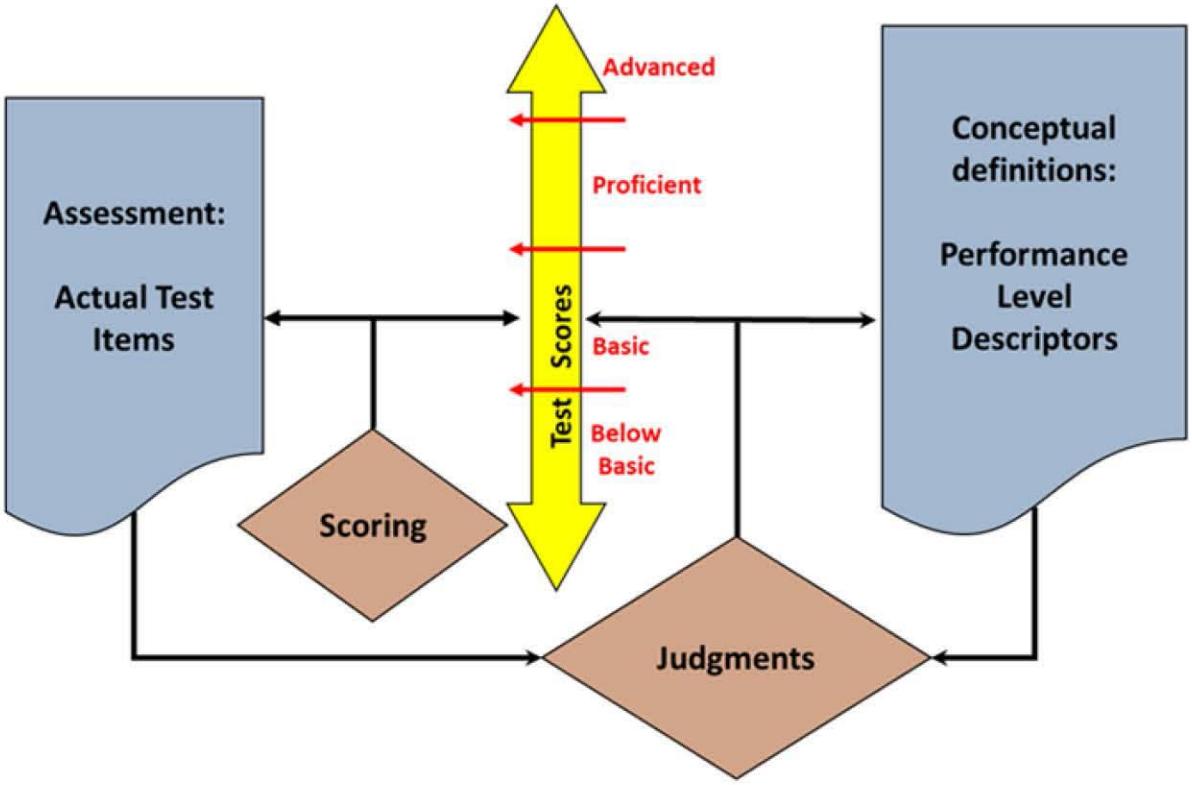

11.3. Setting Cut Scores

Figure 11.3 illustrates the process of linking test scores with performance levels through a combination of empirical data and expert judgment.

On one side, it begins with the assessment, consisting of actual test items that generate test scores after scoring. On the other side are the conceptual definitions, represented by the performance level descriptors (PLDs), which define what each level: Below Basic, Basic, Proficient, and Advanced, means in terms of student performance.

The centre arrow in the figure shows the test score continuum, where cut scores are placed to distinguish between performance levels. These cut scores are established through judgment processes, guided by both scoring outcomes and the performance descriptors, ensuring that the levels reflect meaningful distinctions in student achievement.

Figure 11.3: Process of linking test scores with performance levels

11.3.1 Bookmark Standard Setting Method

The standard Bookmark procedure (Mitzel et al., 2001) is a complete set of activities designed to yield cut scores on the basis of participants' reviews of collections of test items. This method relies on expert judgment and uses an Ordered Item Booklet (OIB), a collection of test items arranged from **easiest to most difficult** based on item statistics.

The following materials were used to the implementation of the Bookmark method:

- Performance Level Descriptors (PLDs): Detailed descriptions outlining what students at each performance level are expected to know and be able to do.
- Ordered Item Booklet (OIB): A sequence of test items arranged from least to most difficult based on item response theory parameters.
- Bookmark Placement Sheets: Templates used by panelists to record cut score decisions based on student performance expectations.

Together, these resources enabled a structured, evidence-informed process for establishing clear and meaningful performance levels that reflect curriculum standards.

11.3.2 Standard Setting: Performance Level Definitions (PLDs) & Setting of Cut Score

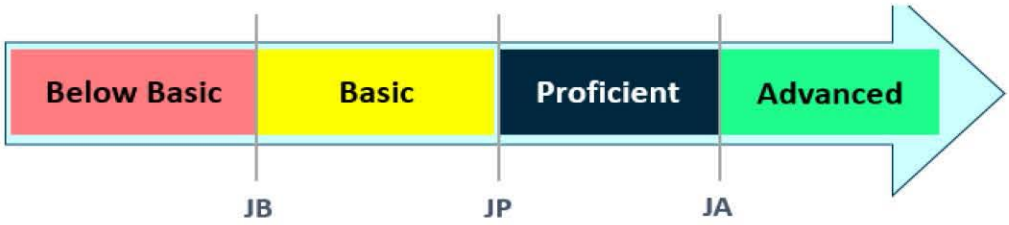

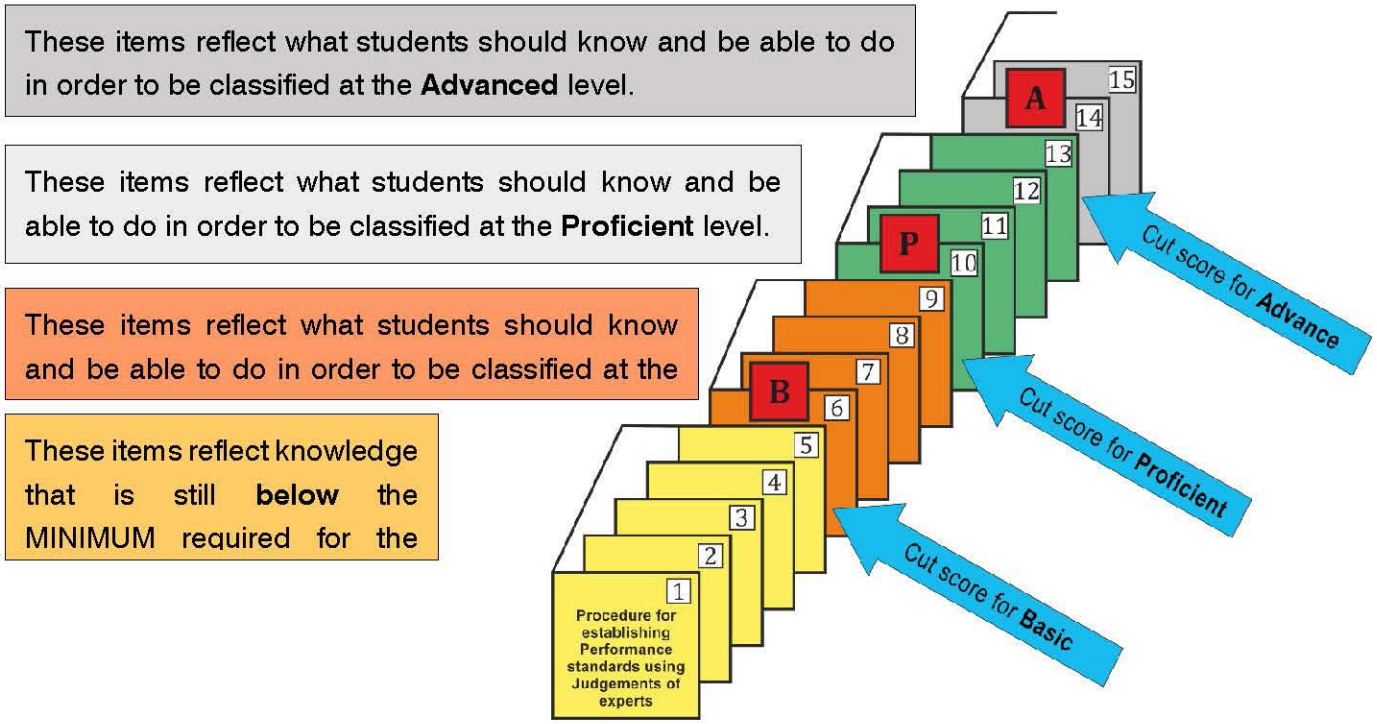

Figure 11.4: Overview of Cut Score Placement Between Levels

Cut scores were established at the transition points between performance levels:

- Just Basic (JB): Cut between *Below Basic* and *Basic*
- Just Proficient (JP): Cut between *Basic* and *Proficient*
- Just Advanced (JA): Cut between *Proficient* and *Advanced*

Panelists were asked to place bookmarks at the point in the OIB where students at each borderline level would likely stop answering items correctly. This judgment was based on whether two out of three hypothetical students at that level would have a ≥ 67% (2/3) chance of answering an item correctly.

Figure 11.5: Example of Bookmark Placement

The method followed a three-step process:

1. Student Profiling: Panellists conceptualized three hypothetical students each for JB, JP, and JA, using performance level descriptors and their own experience.
2. Item Analysis: Panellists reviewed items in the OIB, considered the skills required, and identified what made items progressively harder.
3. Bookmark Placement:
    - For each level (JB, JP, JA), panellists identified the first item where two of the three hypothetical students would likely fail (i.e., <67% chance of answering correctly).
    - A bookmark was placed between the last item likely to be answered correctly and the first item likely to be missed.

Process was conducted independently by each panellist for all three levels. Each panellist went through three rounds of judgment, with feedback provided after each round:

- Location Statistics: Showed bookmark placements and resulting cut scores.
- Impact Data: Indicated the percentage of students falling into each performance level based on current cut scores.

11.4 PARAKH Rashtriya Sarvekshan 2024 Standard Setting: Performance Level Definitions (PLDs) & Setting of Cut Score

To establish meaningful and reliable performance standards for the PARAKH Rashtriya Sarvekshan 2024, a series of structured workshops were held in March 2025. These workshops were conducted separately for each stage of school education—Foundational, Preparatory, and Middle—to ensure stage-appropriate benchmarks and learning expectations. Bringing together academic experts, subject specialists, curriculum developers, and experienced practitioners, the workshops aimed to define performance level descriptors and set cut scores aligned with the National Curriculum Framework. The workshop for the Foundational Stage was held from 5th to 7th March 2025, followed by the Preparatory Stage workshop from 10th to 12th March 2025, and the Middle Stage workshop from 17th to 19th March 2025. Curriculum experts and teachers from almost all Indian States and Union Territories (UT) participated in the workshops.

(a) Development of Performance Level Definitions (PLDs)

For the PARAKH Rashtriya Sarvekshan 2024, four performance levels were established across the Foundational, Preparatory, and Middle Stages of education. These levels are: (a) Below Basic, (b) Basic, (c) Proficient, and (d) Advanced.

During the stage-specific workshops, participants were provided with general definitions for each of the four performance levels. They were then trained to develop detailed, stage and subject-specific definitions corresponding to the learning competencies assessed at each stage. These definitions were required to clearly

articulate the minimum knowledge, skills, and abilities (KSAs) a student must demonstrate to be classified under each performance level.

The focus was on defining PLDs for the Foundational Stage, Preparatory Stage and Middle Stage. These refined, competency-based definitions are referred to as Performance Level Definitions (PLDs) and serve as benchmarks for interpreting student performance in the PARAKH Rashtriya Sarvekshan 2024.

(b) Setting of Cut Scores

Using the Performance Level Definitions (PLDs), subject-specific cut scores were established for each of the four performance levels. The cut scores were determined using the Bookmark Method, which organizes test items in order of increasing difficulty based on Item Response Theory (IRT) response probabilities. In this method, panelists place a "bookmark" in the Ordered Item Booklet (OIB) at the point where a student at the threshold of a performance level is expected to respond correctly to the items before the bookmark and incorrectly to the ones after.

For this purpose, the PARAKH Rashtriya Sarvekshan 2024 test items for Grade 3 (Foundational Stage), 6 (Preparatory Stage), and 9 (Middle Stage) were compiled into OIBs for each subject.

The process of setting cut scores was conducted over three iterative rounds. After each round, psychometricians provided feedback to participants based on two types of statistical data:

Round 1: Location Statistics – This included data on median cut scores, the range/spread of scores, clustering, and dispersion of the scores submitted by panelists.

Round 2: Impact Data – This included the estimated percentage of students (based on PARAKH data) who would be classified into each performance level using the aggregated cut scores proposed by participants.

In the final round, only the National Assessment Centre, PARAKH was informed of the finalized subject-specific cut scores.

A five-step analysis process (given below) was carried out as preparatory activity for the standard setting workshops:

1. Estimation of initial IRT-based parameters (items and students) for PARAKH Rashtriya Sarvekshan 2024
2. Conversion of IRT-based student parameters into scaled score through a linear transformation process (with a mean of 300 and a standard deviation of 50)
3. Re-estimation of parameters of the items at response probability of 0.67
4. Ordering of the assessment items from easiest to most difficult
5. Creation of ordered item booklets (one item per page) by PARAKH for each subject and generation of copies for each standard setting workshop panelist.

11.5 Overall National Performance Results for PARAKH Rashtriya Sarvekshan 2024

As noted, the Bookmark Method was used to determine proficiency level cut scores based on expert judgment and item response theory (IRT). It relies on the response probability of 0.67 (2/3), RP67,

meaning that cut scores are placed where a borderline student (i.e., a student at the threshold of a performance level) is expected to answer an item correctly 67% of the time.

The cut scores for each Grade provided in tables 11.3 (Grade 3), 11.4 (Grade 6), and 11.5 (Grade 9).

Figures 11.6a, 11.6b, and 11.6c were created to visually represents the application of the RP67 method for each Grade and subjects assessed. These figures include:

- A set of item characteristic curves (ICCs) showing the expected item scores as a function of the scaled scores.
- A horizontal reference line at 0.67 indicates the RP67 threshold.
- Vertical dashed lines indicating the cut scores for transitioning between proficiency levels:
    - Below Basic to Basic
    - Basic to Proficient
    - Proficient to Advanced

These graphical representations provide insights into how proficiency levels were empirically established and how they relate to the items. The colour coding of the ICCs is based on associating an item's RP67 with the appropriate proficiency level.

To generate ICC plots, the key properties for a set of sample test questions were defined: their difficulty (how hard each question is) and discrimination (how well it separates high and low-ability students). Then, for each question, the probability of a correct answer across a full spectrum of student ability levels, from low to high, was calculated. Finally, these probabilities were plotted, resulting in the characteristic 'S'-shaped curve for each item. This curve visually represents how the likelihood of answering a question correctly changes as a student's overall ability increases.

11.5.1 Cut Scores for Grade 3

The cut scores for Grade 3 Language and Mathematics arising from the standard setting procedure are given in Table 11.3.

Table 11.1. Cut Scores for Proficiency Levels of Grade 3 Language and Mathematics

Grade	Subject	Basic	Proficient	Advanced
Grade 3	Language	273	302	332
	Mathematics	287	313	340

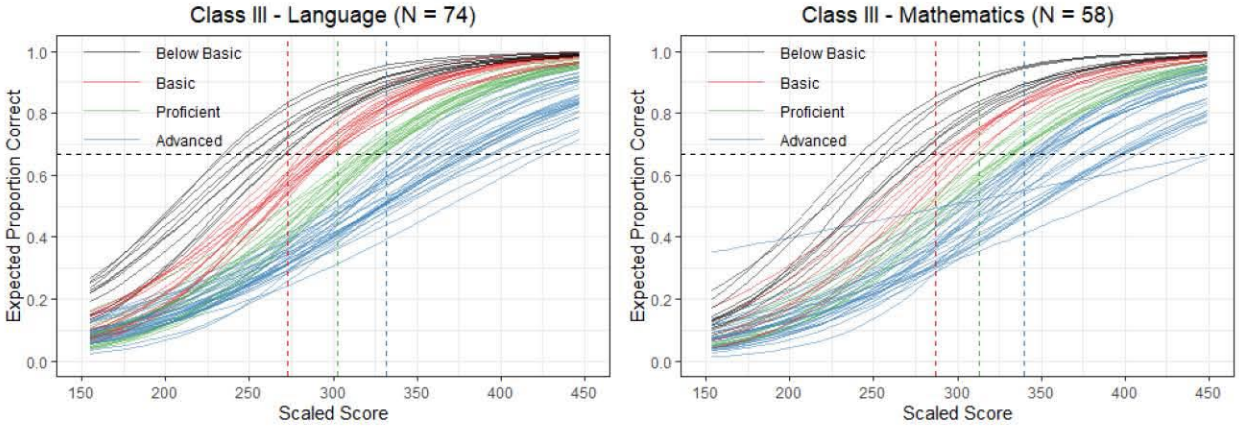

Figure 11.6a: Item characteristic curves (colored by item proficiency level), proficiency level cutoffs (vertical), and RP67 (horizontal) for Grade 3 Language (left) and Mathematics (right).

11.5.2 Cut Scores for Grade 6

The cut scores for Grade 6 Language, Mathematics, and World Around Us resulting from the standard setting procedure are displayed in Table 11.4.

Table 11.2: Cut Scores for Proficiency Levels of Grade 6 Language, Mathematics, and World Around Us

Grade	Subject	Basic	Proficient	Advanced
Grade 6	Language	327	348	382
	Mathematics	286	311	382
	World Around Us	295	320	394

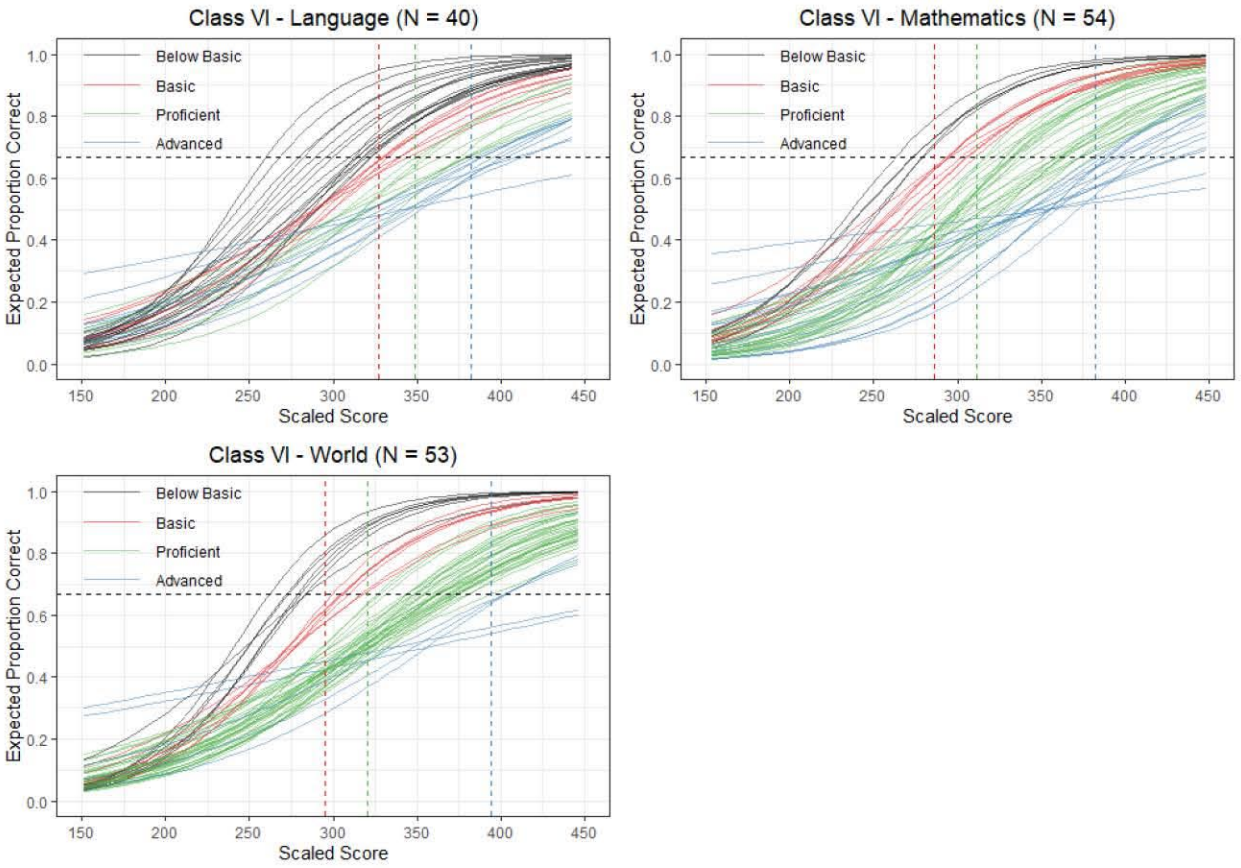

Figure 11.6b: Item characteristic curves (colored by item proficiency level), proficiency level cutoffs (vertical), and RP67 (horizontal) for Grade 6 Language, Mathematics, and World Around Us.

11.5.3 Cut Scores for Grade 9

The cut scores for Grade 9 Language, Mathematics, Science, and Social Science obtained through the standard setting procedure are shown in Table 11.5.

Table 11.5. Cut Scores for Proficiency Levels of Grade 9 Language, Mathematics, Science, and Social Science

Grade	Subject	Basic	Proficient	Advanced
Grade 9	Language	253	305	368
	Mathematics	314	331	341
	Science	283	295	314
	Social Science	265	297	331

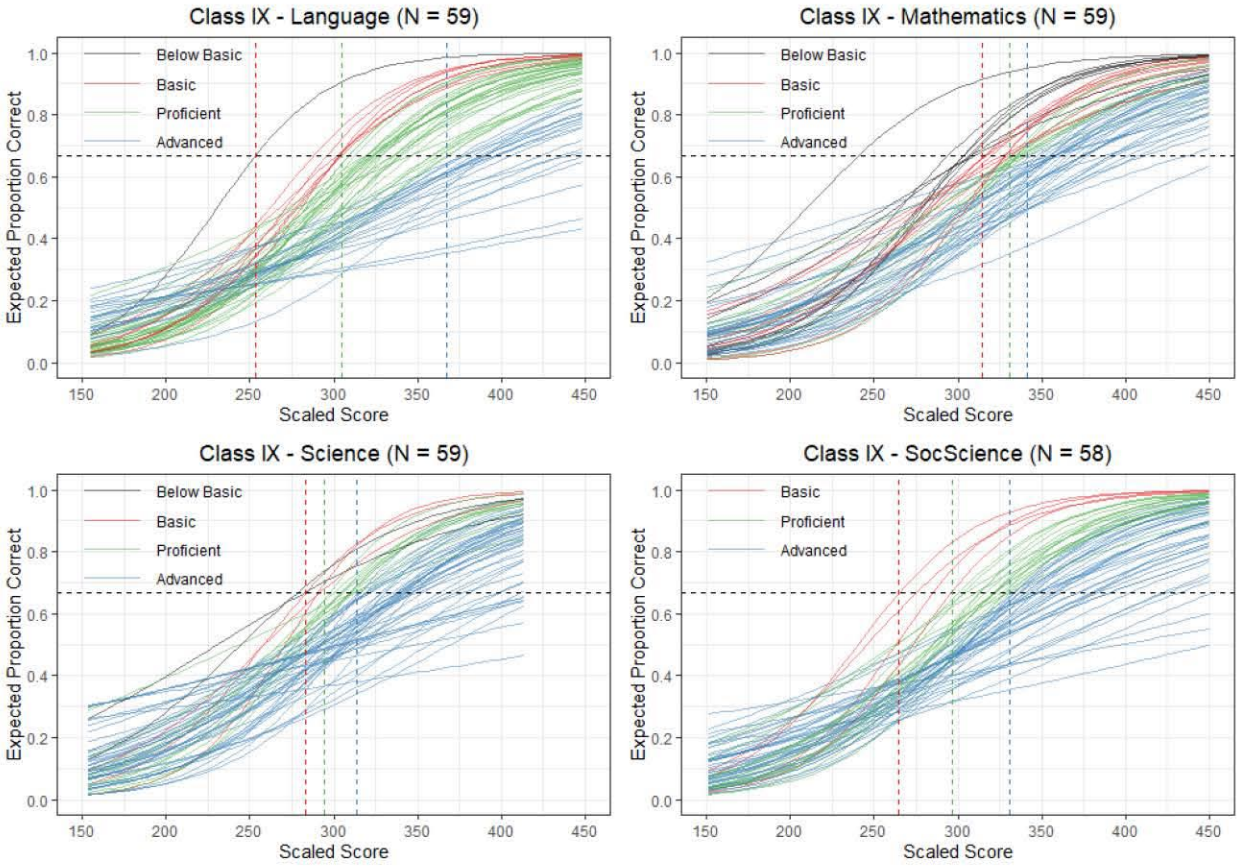

Figure 11.6c: Item characteristic curves (colored by item proficiency level), proficiency level cutoffs (vertical), and RP67 (horizontal) for Grade 9 Language, Mathematics, Science and Social science.

11.6 Distribution of Students in Different Proficiency Level

The tables (table 11.6 to 11.8) and graphs (figure 11.7 to 11.9) below depict the distribution of students across different performance levels and subjects. A density plot is created to show performance distribution with levels categorized as Below Basic, Basic, Proficient, and Advanced. The vertical dashed lines represent the cut scores that separate these performance levels.

Computing the percentage of students in each proficiency levels begins by first iterating through each of the five Plausible Values (PVs) independently. For each single PV, every student is assigned to a proficiency level (e.g., Below Basic, Basic) based on the established cut points. Then the proportion of students within each of these categories for that specific PV is calculated. This process is then repeated for all five PVs, averaging the five resulting percentages for each category. This provides a single, robust estimate for the final report that properly accounts for the measurement variance inherent in the plausible values.

11.6.1 Proficiency Level Results for Grade 3

The percentage of students at each proficiency level for Grade 3 Language and Mathematics are shown in Table 11.6.

Table 11.3 Percentage of students in Different Proficiency Level for Grade 3 Language and Mathematics

Proficiency Level	Language	Mathematics
Below Basic	27%	33%
Basic	12%	13%
Proficient	13%	14%
Advanced	48%	40%

In Grade 3, the distribution of students presents a positive picture of education in the foundational stage.

For example, in Language, 48% of students are in the Advanced category, with another 13% being Proficient. This indicates that most Grade 3 students meet or exceed expectations. Also, 12% in Basic and 27% in the Below Basic category. In Mathematics the distribution is also positive, with 40% of students at the Advanced level and 14% at the Proficient level.

Grade 3 students are generally grasping the foundational concepts. The cut points for Grade 3 are designed to assess these fundamental skills, and the results show that most students are meeting these benchmarks.

Figure 11.7 shows the density plot of the first plausible value for Grade 3 Language and Mathematics. The vertical lines indicate the proficiency level cuts. These cut points are contained within the center of the distribution indicating a good concordance between student performance and proficiency expectation during the foundational stage of education.

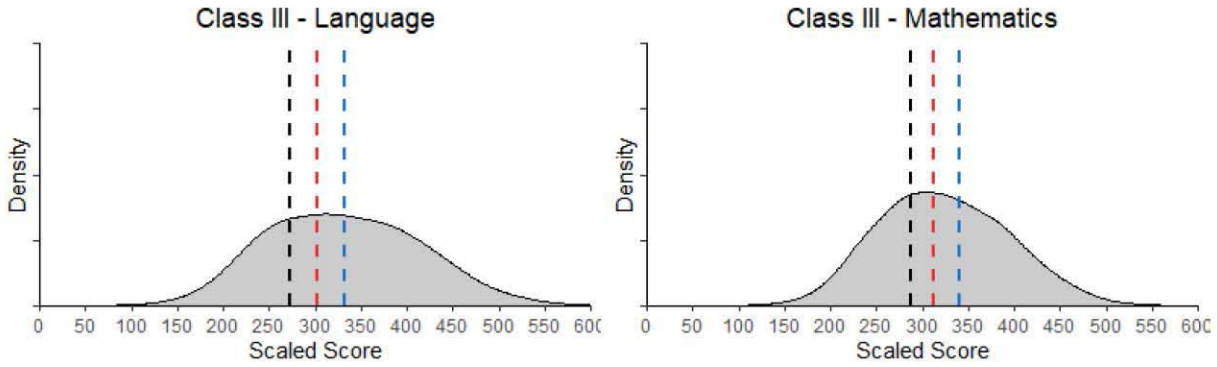

Figure 11.7: Density plots of first PV showing weighted distribution of student scores and proficiency cutoffs for Grade 3.

11.6.2 Proficiency Level Results for Grade 6

The percentage of students at each proficiency level for Grade 6 Language, Mathematics, and World Around Us are given in Table 11.7.

Table 11.4 Percentage of students in Different Proficiency Level for Grade 6 Language and Mathematics, and World Around Us

Proficiency Level	Language	Mathematics	World Around US
Below Basic	58%	47%	44%
Basic	9%	15%	16%
Proficient	13%	27%	30%
Advanced	20%	11%	9%

In Grade 6, the distribution indicates that students are struggling to keep with the new standards set for the preparatory stage in education. In Language, the percentage of students in the Below Basic category has increased to 58% and falls to 20% for the Advanced category. In Mathematics, a similar decline is seen. The Below Basic group grows to 47%, and the Advanced group falls to just 11%. In The World Around Us, a similar distribution is seen, 44% of students are Below Basic and 9% in advanced group.

Figure 11.8 shows the density plot of the first plausible value for Grade 6 Language, Mathematics, and The World Around US. The vertical lines indicate the proficiency level cuts. The distribution of students is now struggling to keep up with the new standards in the 3 subjects assessed.

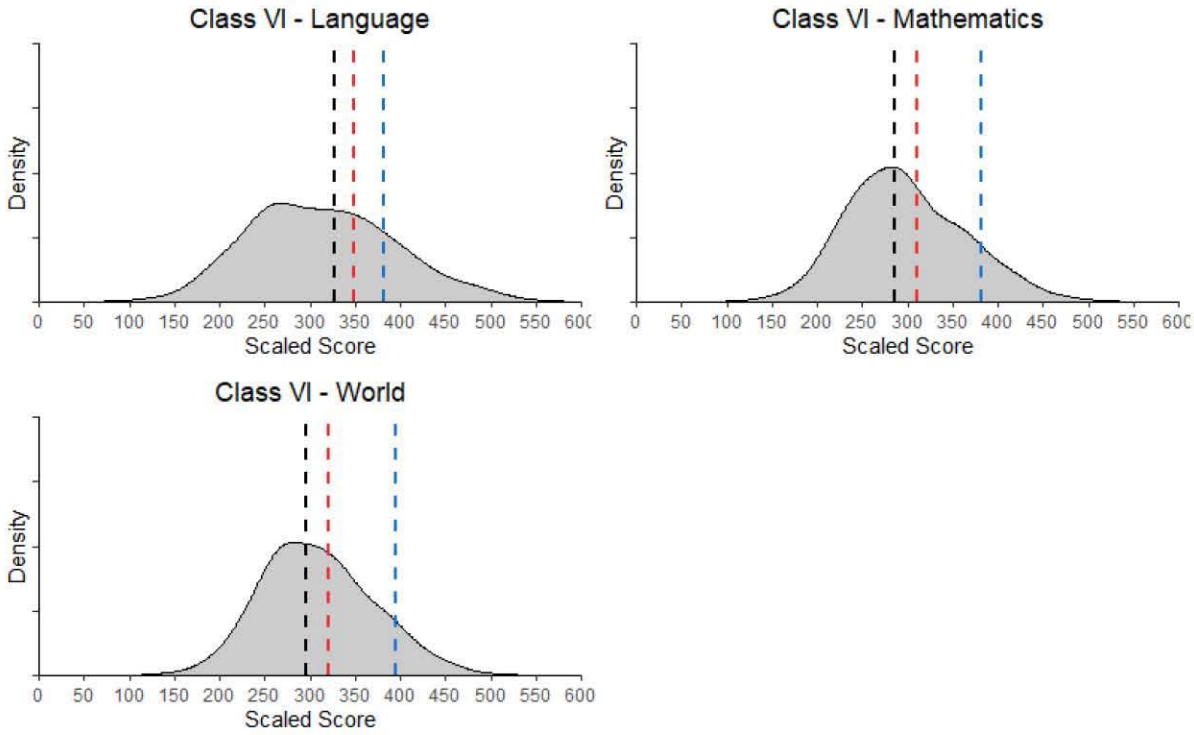

Figure 11.8: Density plots of the first PV showing weighted distribution of student scores and proficiency cutoffs for Grade 6.

11.6.3 Proficiency Level Results for Grade 9

The percentage of students at each proficiency level for Grade 9 Language, Mathematics, Science, and Social Science are given in Table 11.8.

Table 11.5 Percentage of students in Different Proficiency Level for Grade 9 Language and Mathematics, Science, and Social Science.

Proficiency Level	Language	Mathematics	Science	Social Science
Below Basic	29%	84%	78%	47%
Basic	39%	5%	6%	26%
Proficient	23%	2%	7%	16%
Advanced	8%	9%	9%	11%

The Grade 9 data reveals a further decline in keeping up with standards, especially in Mathematics and Science. In Mathematics, 84% of students fall into the Below Basic category. The Proficient and Advanced categories combined account for less than 12% of students. In Science, 78% of students are rated as Below Basic, indicating a similarly sharp decline. Language and Social Science, while

better than Math and Science for Garde 9, still show a similar trend, with a large percentage of students in the Basic and Below Basic categories and a very small percentage at the Advanced level.

Figure 11.9 shows the density plot of the first plausible value for Grade 9 Language, Mathematics. Science and Social Science. The vertical lines indicate the proficiency level cuts. There is now an extreme gap between student performance and proficiency standards. The gaps in previous grades have now been compounded in Grade 9 to an even wider extent.

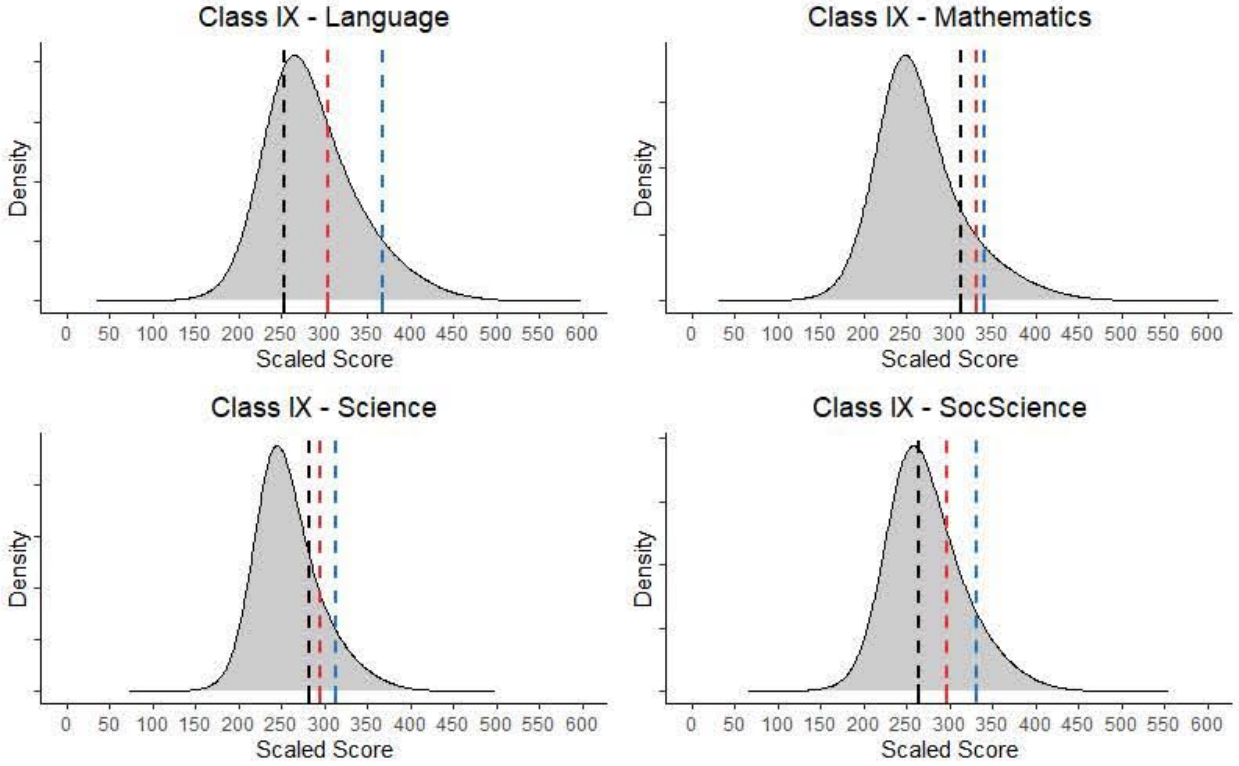

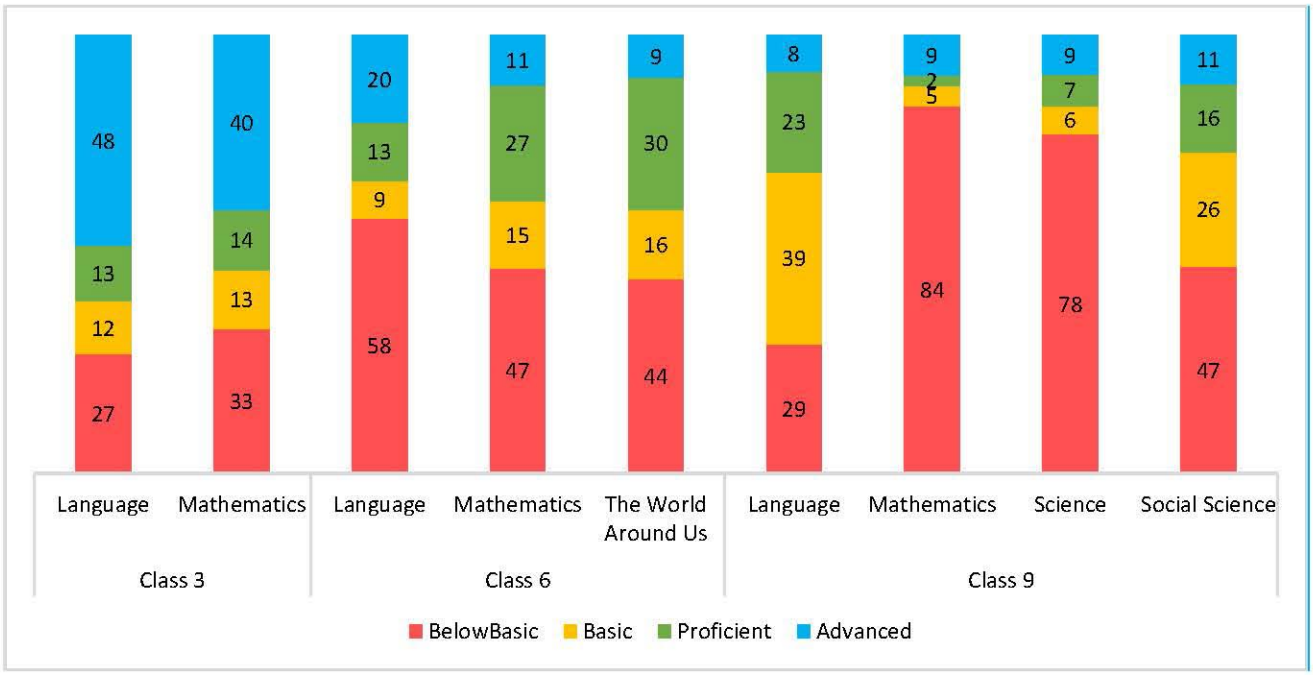

Figure 11.9: Density plots of the 1st PV showing weighted distribution of student scores and proficiency cutoffs for Grade 9.

The following figure presents the percentage of students in each performance level, at the National level (as shown in the table 11.10 to 11.12).

Figure 11.10: Percentage of Students by Performance Level

Overall, these distributions and cut points show a widening achievement gap between student performance and standards as a student ascends from the foundational to the middle stages of education.

Chapter 12: Contextual Questionnaires Analysis

12.1 Purpose of Contextual Data Collection

The PARAKH Rashtriya Sarvekshan 2024 aims to measure student learning outcomes while also capturing the broader educational context in which learning occurs. Three background questionnaires were administered: the Pupil Questionnaire (PQ), Teacher Questionnaire (TQ), and School Questionnaire (SQ). These instruments collect data on both general background characteristics and validated non-cognitive factors, which are essential for understanding how socio-economic, environmental, and pedagogical conditions influence student achievement.

The questionnaires include a mix of individual background items (e.g., access to digital resources, parental education) and multi-item scales intended to measure latent factors (e.g., teaching practices, social-emotional wellbeing, job satisfaction). The analysis of these instruments supports both descriptive and inferential goals—informing policy, advancing research, and contextualizing learning outcomes across the country.

The analytical process served four major purposes:

- **Ensure the quality** of final datasets used for analysis and reporting
- **Finalize the development and the documentation of the measurement properties** of the instruments and their intended factors
- **Generate factor scores** for each of the validated factors to support future research
- **Examine the degree to which the questionnaire factors are related to cognitive achievement**

The resulting factors and their associated factor scores provide a structured framework to assess the extent to which the backgrounds of students, teachers, and schools, as well as the learning environments, access to resources, and other variables shape educational experience. These data and the analysis results are intended to enable evidence-based decision-making by national and sub-national education authorities seeking to improve educational outcomes.

12.1.1 Overview of Instruments (Pupil, Teacher, and School Questionnaires)

For PARAKH Rashtriya Sarvekshan 2024, three contextual instruments, the Pupil Questionnaire (PQ), Teacher Questionnaire (TQ), and School Questionnaire (SQ) were administered to capture diverse aspects of India's educational landscape. Each instrument was tailored to its target group, covering domains such as student

background and wellbeing, teacher practices and professional development, and school resources and leadership.

Figure 12.1 provides an overview of their target populations, number of items, domains covered, and number of respondents. Detailed item-level descriptions and finalized factor structures are provided in the corresponding codebooks.

Figure 12.1

Overview of Contextual Questionnaires—Target Groups, Items, Theoretical Constructs, and Respondents

	 **Pupil Questionnaire**	 **Teacher Questionnaire**	 **School Questionnaire**
Target Group	Students (Grade III, VI, IX)	Teachers teaching Grades III, VI, IX	School Principals
Number of Items	**90** items for Grade III **90** items for Grade VI **118** items for Grade IX	**96** items	**121** items
Theoretical Constructs Covered	• Student and parental background (SES Index) • Learning attitudes & socio-emotional wellbeing School experience & climate	• Teacher background & professional context • Pedagogical practices & beliefs Professional development & school context	• School resources & infrastructure • School organization & leadership School climate & community engagement
Number of respondents	**599,026** students in Grade III **663,195** students in Grade VI **852,801** students in Grade IX	**270,424** teachers nationwide	**74,229** school principals nationwide

Note: The constructs shown in this infographic represent the broad areas that the questionnaires were designed to measure. The specific factors identified through statistical analysis (factor analysis), along with the SES index, are presented in later sections of this chapter.

All three questionnaires were developed by the PARAKH team at NCERT, drawing upon National Achievement Survey (NAS) 2021, and international large-scale assessment frameworks. While rooted in India's educational context, the development of the PARAKH Rashtriya Sarvekshan 2024 constructs in each of the domains indicated in Figure 12.1 was informed by international best practices to allow for robust psychometric analysis and policy interpretation (National Council for Education Research and Training [NCERT], 2024; Organisation for Economic Co-operation and Development [OECD], 2024; National Center for Education Statistics [NCES], 2024).

12.1.2 Analytical and Psychometric Framework

As shown in Figure 12.1, the contextual questionnaires reached more 2.1 million students, over 270,000 teachers, and more than 74,000 school principals nationwide. Analyses followed a structured psychometric approach across all three instruments. This included data quality analysis and preparation, factor analyses, factor reliability, scoring analyses and extensive review of the analysis results by content experts and psychometricians to finalize the development of the factors and ensure their validity. It followed that the measurement properties of each questionnaire were clearly documented and that each of the factor scores reported could be reliably used for further analysis, including correlational analyses to assess the strength of their relationships to the student's cognitive outcomes.

12.2. Methodology

The contextual questionnaires administered as part of PARAKH Rashtriya Sarvekshan 2024 aimed to measure latent factors underlying pupil, teacher, and school conditions through a multi-stage psychometric process. The analytical framework, as shown in figure 12.2, comprised five stages applied consistently across instruments.

Figure 12.2

Analytical Framework for Contextual Questionnaire in PARAKH Rashtriya Sarvekshan *2024*

The analytical stages were as follows:

1. **Data Preparation** – to conduct data checks, evaluate and handle missing data, and to recode item responses, as needed

2. **Exploratory Factor Analysis (EFA)** – to empirically identify the underlying structure of the factors, provide empirical information for item review, and to finalize the removal (if necessary) and mapping of the items to the factors
3. **Confirmatory Factor Analysis (CFA)** – to confirm the factor structure, evaluate the degree to which the factor models fit the data and the factors are related to each-other, and evaluate reliability of each of the finalized factors
4. **Factor Score Computation** – to report the scores associated with each factor and to provide the data needed for further analysis
5. **Association with Achievement Data:** to estimate the correlations (relationships) between the questionnaire factor measured and student performance.

12.2.1 Data Preparation and Processing

The following section describes the analysis and the results of the of the PQ, TQ, and SQ data preparations.

Pupil Questionnaire (PQ)

After cleaning, filtering, and recoding, three final datasets were created: one each for Grade 3, 6 and 9. These were used for Grade-wise EFA, CFA, and factor score development. All data processing, including recoding, data cleaning, Exploratory Factor Analysis (EFA), and Confirmatory Factor Analysis (CFA), was conducted in the R Statistical Software (R Core Team, 2025).

Teacher Questionnaire (TQ)

From the original 96 questionnaire items (excluding demographic and sampling variables), 83 items were selected for factor analysis.

The final set of factors was determined through a careful, multi-step process that combined: (i) Exploratory Factor Analysis (EFA) to identify underlying structures, (ii) examination of inter-item correlation patterns to ensure conceptual coherence within each factor, and (iii) assessment of internal consistency using Cronbach's alpha, following international benchmarks such as the .60 threshold recommended by PISA (OECD, 2024). Factors also needed to demonstrate clear theoretical relevance to teaching practices and school contexts.

Given this robust approach—incorporating both statistical and conceptual criteria—additional Confirmatory Factor Analysis (CFA) was not undertaken for the Teacher Questionnaire. The final factor structure is therefore based on well-supported and interpretable groupings of items aligned with the instrument's intended use. All item-level details and factor assignments are documented.

School Questionnaire (SQ)

From the original 121 items in the School Questionnaire, almost all were retained for factor analysis.The final set of factors was selected using multiple criteria: the results of exploratory factor analysis, examination of inter-item correlations within each factor, internal consistency measured by Cronbach's alpha (with .60 as a recommended benchmark), and strong theoretical relevance to school-level processes and policy priorities.

All factor analysis was conducted at the national level to ensure consistent interpretation across contexts and to support meaningful comparisons with school-level average student achievement data.

12.2.2 Psychometric Analysis

Exploratory Factor Analysis (EFA) for Factor Identification

Exploratory Factor Analysis (EFA) was conducted to support the identification of latent factors within the background questionnaires (Pupil, Teacher, and School). EFA is a widely used statistical technique in large-scale assessments to uncover the relationship between observed variables and underlying factors (Costello & Osborne, 2005; Schmitt, 2011). While all three questionnaires were developed with intended theoretical factors, EFA was applied empirically to assess whether the items expected to measure the same factor grouped onto single factors and to explore new or unexpected item groupings.

As a preliminary diagnostic step, inter-item correlation plots were generated to inspect clustering patterns visually. EFA was then conducted using Principal Axis Factoring (PAF) with oblique (oblimin) rotation (Conway & Huffcutt, 2003), based on the following rationale:

- PAF estimates factors based on shared variance and is appropriate for identifying latent traits.
- Oblique rotation allows for intercorrelated factors, reflecting theoretical expectations in social research.

Confirmatory Factor Analysis (CFA) for Model Validation

Confirmatory Factor Analysis (CFA) was used to validate the factor structures identified through EFA and to assess the internal consistency and fit of the models. CFA models were estimated using R for each questionnaire (R Core Team, 2025).

Model fit was evaluated using multiple well-established indices (Goretzko et al., 2024):

- **Root Mean Square Error of Approximation (RMSEA)** (Steiger, 1990)
- **Standardized Root Mean Square Residual (SRMR)**

- **Comparative Fit Index (CFI)** (Bentler, 1990)
- **Goodness-of-Fit Index (GFI)** (Jöreskog & Sörbom, 1982)

Model fit thresholds followed Hu and Bentler's (1999) guidelines: RMSEA $\leq$ .06, CFI and GFI $\geq$ .95, and SRMR $\leq$ .08. The final CFA models for the PQ met these criteria, supporting the appropriateness of the identified factor structures.

Standardized factor loadings were reviewed during CFA to assess item alignment with the respective factors. While loadings above .30 were preferred, items with lower values were retained if conceptually meaningful.

Reliability

Internal consistency was assessed using the recoded data ignoring the removed items by computing Cronbach's alpha (α). Following international practice (e.g., OECD, 2024), a minimum threshold of .60 was used to identify factors that may be too unreliable for additional expert review. However, statistical criteria alone did not determine retention. Emphasis was placed on each factor's interpretive usefulness and policy relevance. As such, factors with slightly lower reliability values were retained if they provided meaningful insights into student, teacher, or school contexts.

This approach ensured that the factors used in downstream analyses retained relevance, transparency, and explanatory value for state- and national-level reporting.

Factor Scores

Once the PARAKH Rashtriya Sarvekshan 2024 questionnaire factors were finalized, factor scores associated with each factor were computed. Each students' factor score was computed using data from the selected items simply as the sum of the student's recoded responses, ignoring the missing responses. Thus, the factor scores included values between 0 and the sum of the item' maximum response category.

Correlation with Achievement

National, state and district level correlations between the student factor scores associated with each factor and the students cognitive scores were computed. With five scaled plausible values or PVs available per student for each subject (as described in Chapter 10), correlations estimates were produced using the first PV. Analysis results are summarized in the next sections at the national level, and detailed correlations results at the state levels are provided in Annex.

12.3. Analysis of the Pupil Questionnaire School-Related Factors

This section presents the analysis of the pupil questionnaire school-related factors. While the factors were expected to be consistent across Grade, adaptations were made to accommodate class-specific and respondent-type considerations.

EFA was first conducted for Grade 9, which was expected to provide the most complete and stable data. This structure yielded eight school-related factors and one composite SES index based on home-related variables. This model was then tested for Grade 6 and 3 using CFA to evaluate cross-Grade applicability. The structure was found to be largely consistent across grades, with one adjustment that the 'Socio-Emotional Wellbeing' factor was revised for Grades 6 and 3 by removing nine items that were only relevant for older students in Grade 9.

This ensured measurement consistency while accounting for age-appropriate item inclusion.

As described in the methodology, the factor structure was first established using Grade 9 responses through Exploratory Factor Analysis (EFA) and then validated separately for Grade 6 and 3 through Confirmatory Factor Analysis (CFA). The results include descriptive statistics, internal consistency estimates (Cronbach's alpha), and CFA model fit indices for each factor, as well as inter-factor correlations.

The Socio-Economic Status (SES) Index derived from items related to home background including *Home Infrastructure & Learning Resources*, *Parental Education*, and *Parental Occupation* is not included in this section. Its construction and its association with achievement outcomes are described in Section 4 of this chapter.

All Pupil Questionnaire item selections, retention, and factor alignment decisions are documented in the Pupil Questionnaire codebook.

12.3.1 Grade 9

Final Factor Structure, Descriptive Statistics, and CFA Results

As established through EFA and validated via CFA, a total of eight school-related factors were finalized for Grade 9. The retention of these factors was guided by multiple criteria: examining inter-item correlation patterns, evaluating EFA loadings, assessing CFA model fit, reviewing internal consistency (Cronbach's alpha), and ensuring strong theoretical relevance in the education literature. These factors represent key dimensions of students' school experiences, including their preferences, perceptions, engagement, emotional wellbeing, and the quality of school infrastructure and support.

Descriptive statistics for these factors are presented in Table 12.1. The table reports the mean and standard deviation of these factor sums, showing a reasonable spread in students' responses across most factors. This variation suggests that the data are suitable for further analysis. For example, the factor *Social-Emotional Wellbeing* had a wide score range and high standard deviation, reflecting diversity in students' emotional states and coping resources. On the other hand, *Bullying Experience* had a much lower mean and SD, as most students reported little to no bullying. This factor is crucial for monitoring equity and school climate.

Table 12.1

Descriptive statistics of the factor scores (Grade 9)

Factor	Description	No. of items	Maximum Score	Mean	SD
Preferred Learning Methods	Students' preferences for different instructional approaches	5	10	6.06	2.71
Teaching Methods	Strategies and pedagogical approaches used by teachers to facilitate learning.	4	4	2.95	1.19
Subject-specific Beliefs and Feelings	Students' attitudes, preferences, and emotional engagement with various academic and non-academic subjects	9	18	10.86	3.93
Extracurricular Activities & Interest	Preferences for creative, physical, social, and digital activities beyond academics	8	8	6.52	1.69
School Infrastructure & Facilities	Availability of essential school resources, including sanitation, drinking water, electricity, sports facilities, meals, and laboratory access	5	5	4.12	1.23
Accommodation & Support for CWSN*	Availability of assistive devices, teacher and peer support, and family assistance for students with special educational needs	4	4	3.03	1.17

Social-Emotional Wellbeing	Students' emotional health, stress levels, social connectedness, confidence, and ability to manage emotions and seek support	13	65	45.38	9.43
Bullying Experience	Exposure to and perceptions of bullying incidents in school settings.	5	5	1.21	1.44

*Note: CWSN = Children With Special Needs

The internal consistency of each factor was evaluated using Cronbach's alpha, while CFA model fit was assessed using the indices detailed in Section 2.3.2. As shown in Table 12.2, most factors demonstrated acceptable high reliability (α = .58 to .76). While three factors had alpha values below .60 -*Teaching Methods*, *School Infrastructure & Facilities*, and *Accommodation & Support for CWSN*- these were retained due to their theoretical relevance and the importance of capturing these aspects for policy reflection and educational planning.

Overall, most of the CFA models met established fit thresholds (Hu & Bentler, 1999) without requiring post-hoc modifications, supporting the structural validity of the factors.

Table 12.2 *Reliability and CFA fit indices for all school-related factors (Grade 9)*

Model	Cronbach's α	SRMR	RMSEA	CFI	GFI
Preferred Learning Methods	.76	.019	.056	.986	.994
Teaching Methods	.59	.015	.045	.988	.998
Subject-Specific Beliefs and Feelings	.75	.031	.052	.944	.983
Extracurricular Activities & Interest	.62	.031	.047	.928	.988
School Infrastructure & Facilities	.59	.017	.036	.983	.997
Accommodation & Support to CWSN*	.58	.014	.040	.991	.998
Social-Emotional Wellbeing	.73	.041	.054	.867	.966
Bullying Experience	.72	.026	.067	.974	.991

*Note: CWSN = Children With Special Needs

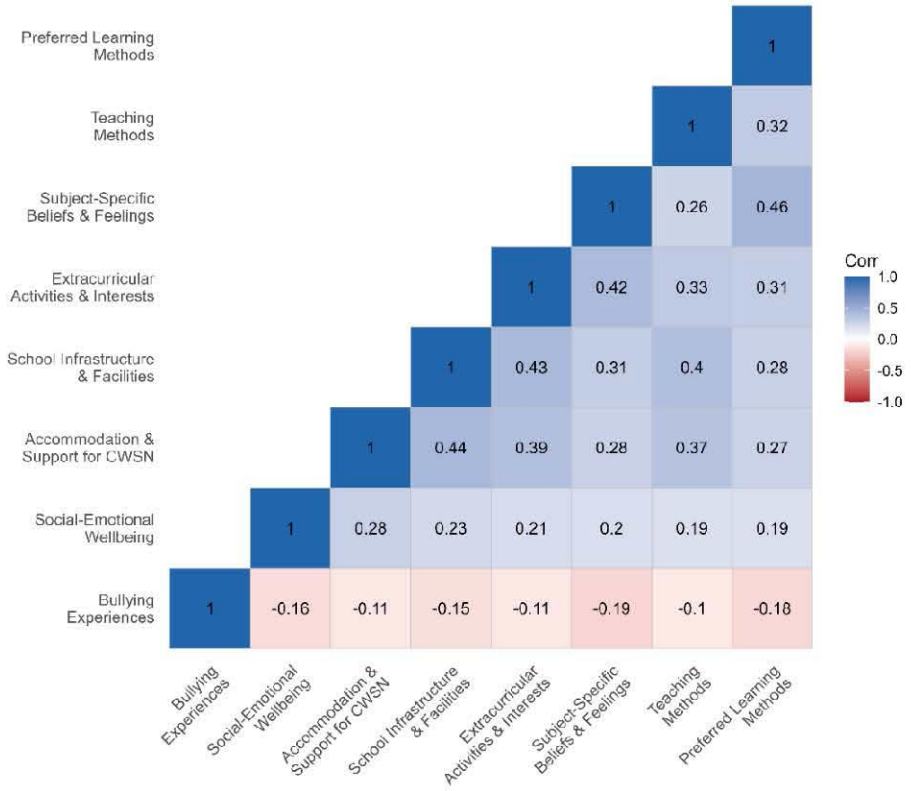

The final list of items under each factor is shown in Annex.

Inter-Factor Correlations

Figure 12.3 presents the inter-factor correlation heatmap for Grade 9 based on factor sums. The correlation matrix shows a generally coherent pattern of associations among the eight school-related factors, with several moderate correlations observed between several conceptually related domains.

- *Subject-Specific Beliefs & Feelings* showed the strongest associations across domains moderately correlated with *Preferred Learning Methods* (r = .46), *Extracurricular Activities & Interests* (r = .42), and *School Infrastructure & Facilities* (r = .31). These findings suggest that students with positive academic attitudes also tend to report stronger engagement and more supportive school environments.
- *Teaching Methods* showed moderate associations with *School Infrastructure & Facilities* (r = .40) and *Extracurricular Activities & Interests* (r = .33), implying that better-resourced schools often promote more interactive instruction and richer learning experiences.
- *Social-Emotional Wellbeing* also demonstrated positive, though modest, relationships with *Extracurricular Activities & Interests* (r = .21), *Subject-Specific Beliefs & Feelings* (r = .20) and *Preferred Learning Methods* (r = .19). This highlights how students' emotional wellbeing is intertwined with their motivation, learning orientation, and their interest in participating in school activities.
- *Preferred Learning Methods* correlated moderately with *Teaching Methods* (r = .32) and *Extracurricular Activities & Interests* (r = .31), indicating that students' preferred ways of learning are shaped by classroom practices and opportunities for participation beyond academics.
- *Extracurricular Activities & Interests* showed a notably strong association with *School Infrastructure & Facilities* (r = .43), suggesting resource-rich schools offer students more varied engagement opportunities.
- *Bullying Experiences* was negatively associated with each positive domain, most notably with *Subject-Specific Beliefs & Feelings* (r = −.19), *Preferred Learning Methods* (r = −.18), and *Social-Emotional Wellbeing* (r = −.16), emphasizing the detrimental impact of bullying on engagement, attitudes, and wellbeing.
- *Accommodation & Support for CWSN* consistently showed positive correlations (r = .27 - .44 with all other factors (except Bullying experience), notably with School Infrastructure & Facilities (r = .44), Teaching Methods (r = .37) and Extra-Curricular Activities & Interest (r = . 39) . However, as this factor is derived from a small subset of students who self-identified as CWSN (approximately 1.3% of the Grade 9 sample), these correlation values should be interpreted with caution and not generalized to the overall student population. Overall, the correlation pattern affirms the eight factors as distinct yet interconnected dimensions of student experience, supporting their use in further analysis of influences on learning outcomes.

Figure 12.3 *Inter-Factor Correlation for PQ (Grade 9)*

This coherent and empirically supported structure for Grade 9 confirms that the questionnaire captured a broad, meaningful set of constructs relevant to teaching quality, infrastructure, emotional wellbeing, student preferences, and inclusion. These factors offer critical insights for improving learning conditions and designing supportive, engaging school environments. The inter-factor correlations are added in Annex.

Correlation with Achievement

Correlation coefficients were computed between the eight school-related factor scores and students scaled achievement scores in Mathematics, Language, Science, and Social Sciences, using the first

plausible value (PV1) for each subject, as described earlier. Table 12.3 summarizes these associations for Grade 9.

Table 12.3

Correlations of School-Related Factors with Students' Cognitive Test Scores for Grade 9

Factor Name	Mathematics	Language	Science	Social Sciences
Preferred Learning Methods	.17	.18	.18	.21
Teaching Methods	.17	.20	.19	.21
Subject-specific Beliefs and Feelings	.21	.25	.24	.27
Extracurricular Activities & Interest	.19	.25	.22	.24
School Infrastructure & Facilities	.19	.25	.23	.24
Accommodation & Support for CWSN*	.14	.18	.18	.21
Socio-Emotional Wellbeing	.12	.10	.12	.14
Bullying Experience	-.13	-.18	-.17	-.19

*Note: CWSN = Children With Special Needs

The results show an overall pattern of alignment between students' reported school experiences and their academic outcomes, in ways consistent with educational theory. Factors such as Preferred Learning Methods, Teaching Methods, Subject-Specific Beliefs and Feelings, School Infrastructure & Facilities, and Extracurricular Activities & Interests all demonstrated positive correlations with achievement across subjects. These patterns are consistent with the understanding that well-supported instructional practices, student engagement opportunities, and adequate school infrastructure can contribute to better learning outcomes by promoting motivation, interest, and effective learning environments.

Social-Emotional Wellbeing also showed positive correlations with achievement, consistent with the idea that students who are emotionally healthy and socially connected are better able to focus on and benefit from instruction, even if the relationship is more indirect.

Conversely, as expected from the literature, Bullying Experience displayed consistent negative associations with achievement scores across all subjects. Such findings reinforce those negative experiences are often associate negatively with students' academic performances.

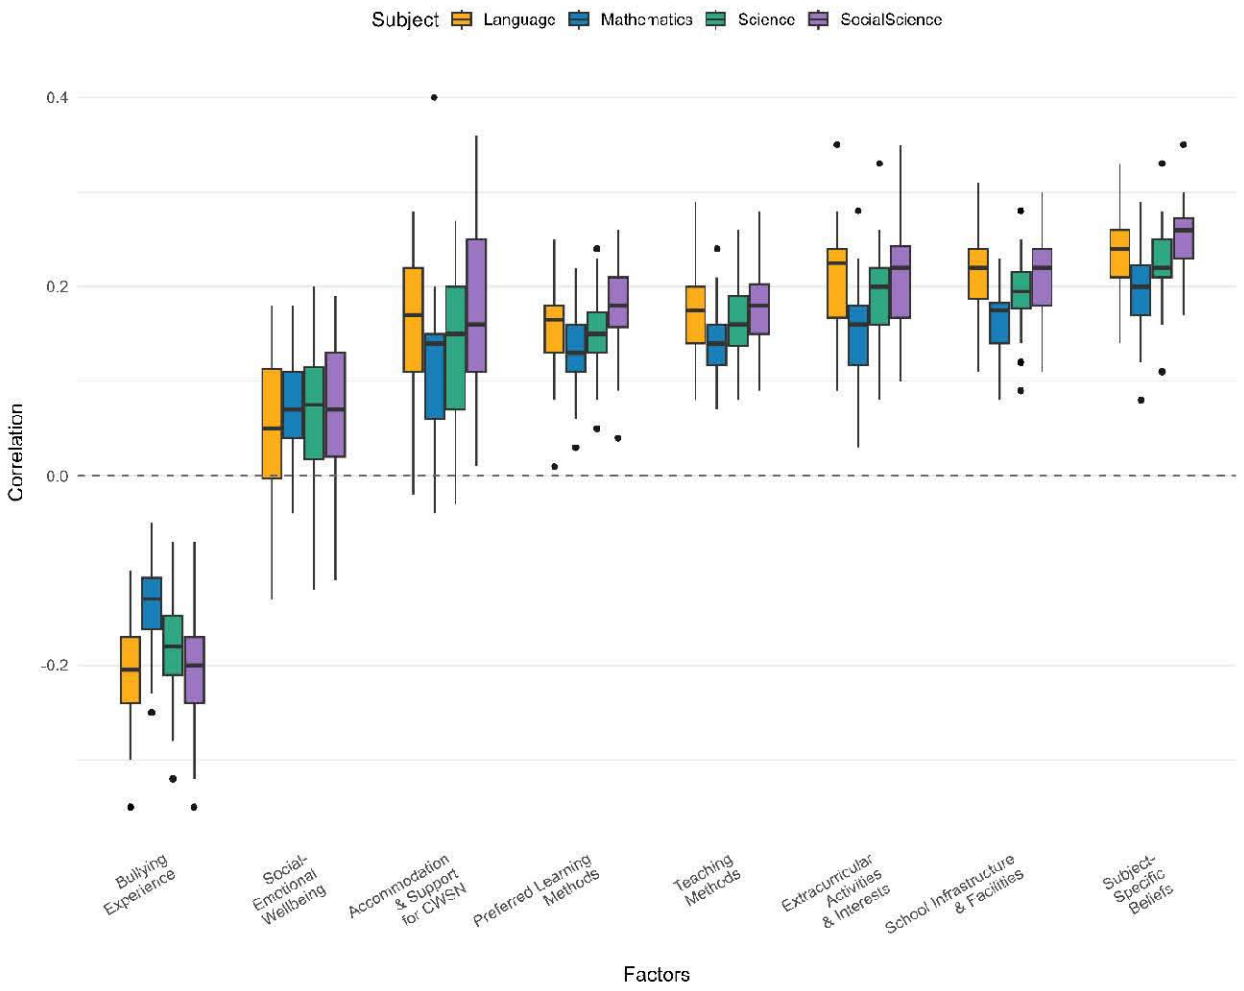

Finally, Accommodation & Support for CWSN positive associations with cognitive scores. This factor was constructed from responses of a small subgroup of students who self-identified as CWSN

(approximately 1.3% of the Grade 9 sample). Among students who report being CWSN, receiving more supports and accommodations is associated with better academic performances.

To explore geographic variability, state-wise differences in these correlations were also analyzed. Figure 12.4 displays boxplots summarizing the distribution of correlation coefficients across 36 States and Union Territories for each school-related factor. In these boxplots, the coloured central box represents the interquartile range (from 25th to 75th percentile), showing where the middle half of the state-level correlation values lies. The horizontal line inside the box marking the median. The vertical lines (whiskers) extend to show the overall spread of the state-level correlation values, and individual dots reflect outliers, states where the correlations are notably high or low compared to others. This boxplot thus provides a concise summary to compare both the typical association and the degree of variability in the relationship between each school factor and achievement across regions.

Overall, as shown in figure 12.4, while the direction of association remained consistent across nearly all states, the magnitude varied, highlighting contextual influences on how the school experiences factors relate to learning outcomes. Such nuanced evidence supports targeted policy actions to improve teaching practices, infrastructure, and student wellbeing according to local needs.

Figure 12.4 *State-wise Variation in Correlations Between School-Related Factors and Cognitive Scores – Grade 9*

12.3.2 Grade 6

Final Factor Structure, Descriptive Statistics, and CFA Results

The eight-factor structure derived for Grade 9 was subsequently assessed for its applicability to Grade 6 data. CFA results confirmed that the same set of factors provided a coherent measurement model for this Grade as well. While other factors contained the same number of items, the Social-Emotional Wellbeing factor contained fewer items in Grade 6 which resulted in lower reliability estimate for the factor compared to older students.

Descriptive statistics summarizing the distribution of factor scores based on factor sums are presented in Table 12.4 Factors such as Preferred Learning Methods, Subject-Specific Beliefs and Feelings, and Extracurricular Activities & Interest displayed relatively higher means and standard deviations, indicating a broad range of preferences and engagement levels among middle-stage students.

Table 12.4 *Descriptive statistics of the factors extracted (Grade 6)*

Factor	Description	No. of items	Maximum Score	Mean	SD
Preferred Learning Methods	Students' preferences for different instructional approaches	5	10	5.96	2.91
Teaching Methods	Strategies and pedagogical approaches used by teachers to facilitate learning.	4	4	2.87	1.20
Subject-specific Beliefs and Feelings	Students' attitudes, preferences, and emotional engagement with various academic and non-academic subjects	9	18	10.79	4.45
Extracurricular Activities & Interest	Preferences for creative, physical, social, and digital activities beyond academics	8	8	6.35	1.94
School Infrastructure & Facilities	Availability of essential school resources, including sanitation, drinking water, electricity, sports facilities, meals, and laboratory access	5	5	3.97	1.35
Accommodation & Support for CWSN*	Availability of assistive devices, teacher and peer support, and family assistance for students with special educational needs	4	4	2.87	1.26
Socio-Emotional Wellbeing	Students' emotional health, stress levels, social connectedness, confidence, and ability to manage emotions and seek support	5	25	16.75	4.21
Bullying Experience	Exposure to and perceptions of bullying incidents in school settings.	5	5	1.53	1.52

*Note: CWSN = Children with Special Needs

Internal consistency estimates and CFA model fit indices are reported in Table 12.5 Cronbach's alpha values ranged from .51 to .79. Subject-Specific Beliefs and Feelings and Preferred Learning Methods achieved the highest reliability, exceeding .75, while other factors such as Teaching Methods and Social-Emotional Wellbeing had lower alphas but were retained based on conceptual significance and acceptable model fit.

Across most factors, CFA indicators were within recommended thresholds, suggesting that the factor structure established for older students remained stable in Grade 6. For example, Teaching Methods, Accommodation & Support for CWSN, and Preferred Learning Methods demonstrated excellent fit statistics (CFI > .98, GFI > .99), comparable to those observed in Grade 9.

Table 12.5

Results of Confirmatory Factor Analysis (Grade 6)

Model	Cronbach's α	RMSEA	SRMR	CFI	GFI
Preferred Learning Methods	.77	.046	.016	.991	.996
Teaching Methods	.55	.048	.016	.984	.998
Subject-specific Beliefs and Feelings	.79	.049	.027	.962	.985
Extracurricular Activities & Interest	.67	.061	.038	.914	.981
School Infrastructure & Facilities	.62	.077	.036	.937	.988
Accommodation & Support for CWSN*	.59	.046	.017	.989	.998
Socio-Emotional Wellbeing	.51	.043	.021	.965	.996
Bullying Experience	.70	.085	.035	.953	.985

*Note: CWSN = Children With Special Needs

Inter-Factor Correlations

The inter-factor correlation matrix for Grade 6, presented in Figure 12.5, showed a pattern of associations broadly similar to Grade 9, while also reflecting developmental nuances characteristic of this age group.

- *Teaching Methods* maintained positive correlations with *School Infrastructure & Facilities* (r = .46) Extracurricular Activities & Interests (r = .39), and Preferred Learning Methods (r = .32), highlighting how structured pedagogical environments often coincide with enhanced resources and engagement opportunities.
- *Subject-Specific Beliefs & Feelings* was moderately associated with *Preferred Learning Methods* (r = .46), *Extracurricular Activities & Interests* (r = .44), and *School Infrastructure & Facilities* (r = .37),

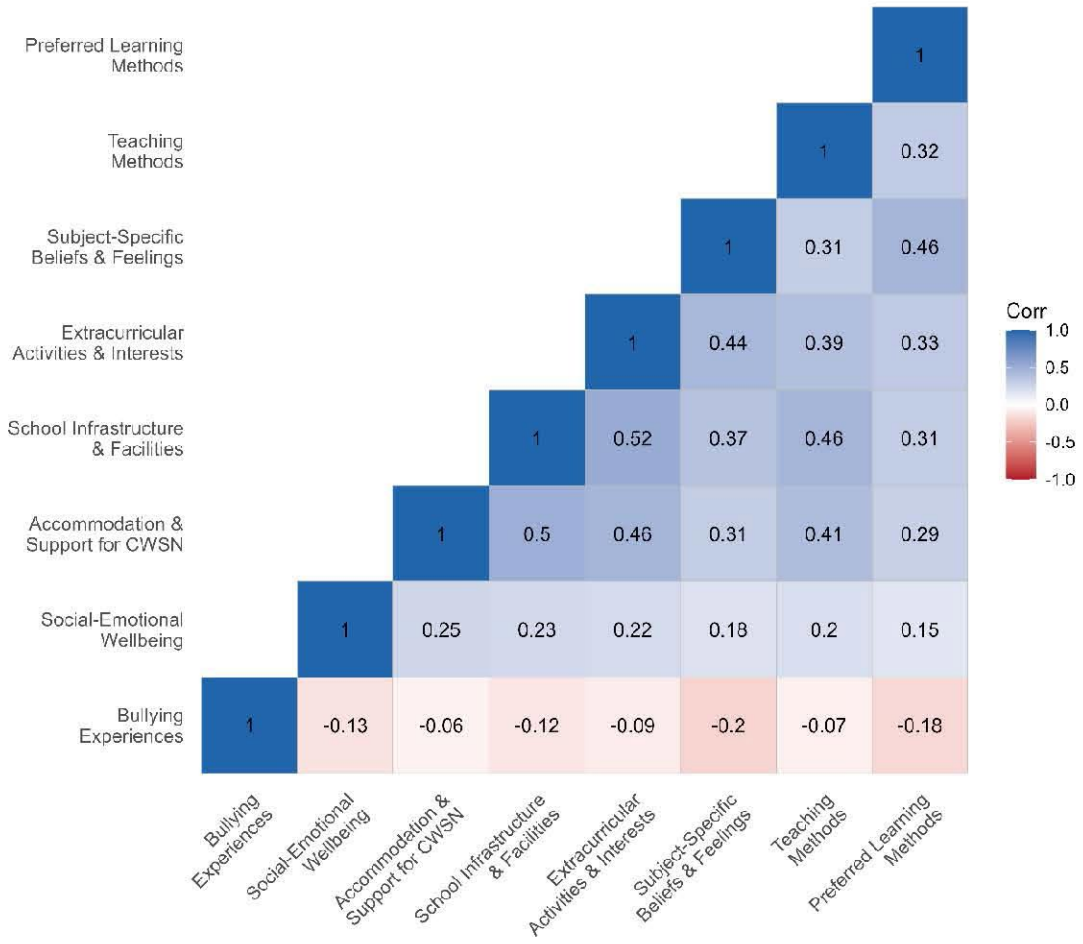

suggesting that students who feel confident and positive about their learning also report stronger engagement and access to supportive learning environments.

- *Extracurricular Activities & Interests* has its strongest correlation with *School Infrastructure & Facilities* ($r = .52$), even higher than Grade 9, suggesting a particularly close connection between resourcing and student engagement at this stage.
- Notably, Bullying Experiences displays even weaker negative correlations with academic and preference domains (e.g., *Subject-Specific Beliefs & Feelings* $r = -.20$, *Preferred Learning Methods* $r = -.18$), whereas in Grade 9, these associations were somewhat more pronounced. This suggests that bullying continues to undermine students' engagement and confidence, though its effects may be less pronounced among younger students.
- *Social-Emotional Wellbeing* had small but positive correlations with *Teaching Methods* ($r = .20$), Accommodation & *Support for CWSN* ($r = .25$), and *Extracurricular Activities & Interests* ($r = .22$). This highlights how students' emotional wellbeing is closely linked to their motivation, engagement, and participation in enriching school activities.
- *Accommodation & Support for CWSN* showed moderate positive links with *School Infrastructure & Facilities* ($r = .50$) and *Teaching Methods* ($r = .41$). As this factor is derived from a small subset of students who self-identified as CWSN, these correlations should be interpreted cautiously and not generalized to the broader population.

In summary, while the overall structure of factor relationships in Grade 6 echoes Grade 9, key contrasts—such as weaker bullying correlations and stronger links between engagement opportunities and resources—highlight developmental differences in school experiences at this stage. The inter-factor correlation table is added in Annex.

Figure 12.5

Inter-Factor Correlation for PQ (Grade 6)

Correlation with Achievement

Associations between the eight school-related factors and students' performance in Mathematics, Language, and The World Around Us (TWAU) were examined to understand how these dimensions relate to academic outcomes in Grade 6. Table 12.6 summarizes the correlation coefficients.

Table 12.6

Correlations of School-Related Factors with Students' Cognitive Test Scores for Grade 6

Model	Mathematics	Language	World Around Us
Preferred Learning Methods	.26	.25	.26
Teaching Methods	.28	.26	.27
Subject-specific Beliefs and Feelings	.32	.32	.33
Extracurricular Activities & Interest	.33	.34	.34
School Infrastructure & Facilities	.34	.35	.35

Accommodation & Support for CWSN	.30	.31	.32
Socio-Emotional Wellbeing	.18	.18	.19
Bullying Experience	-.17	-.23	-.23

Note: CWSN = Children With Special Needs

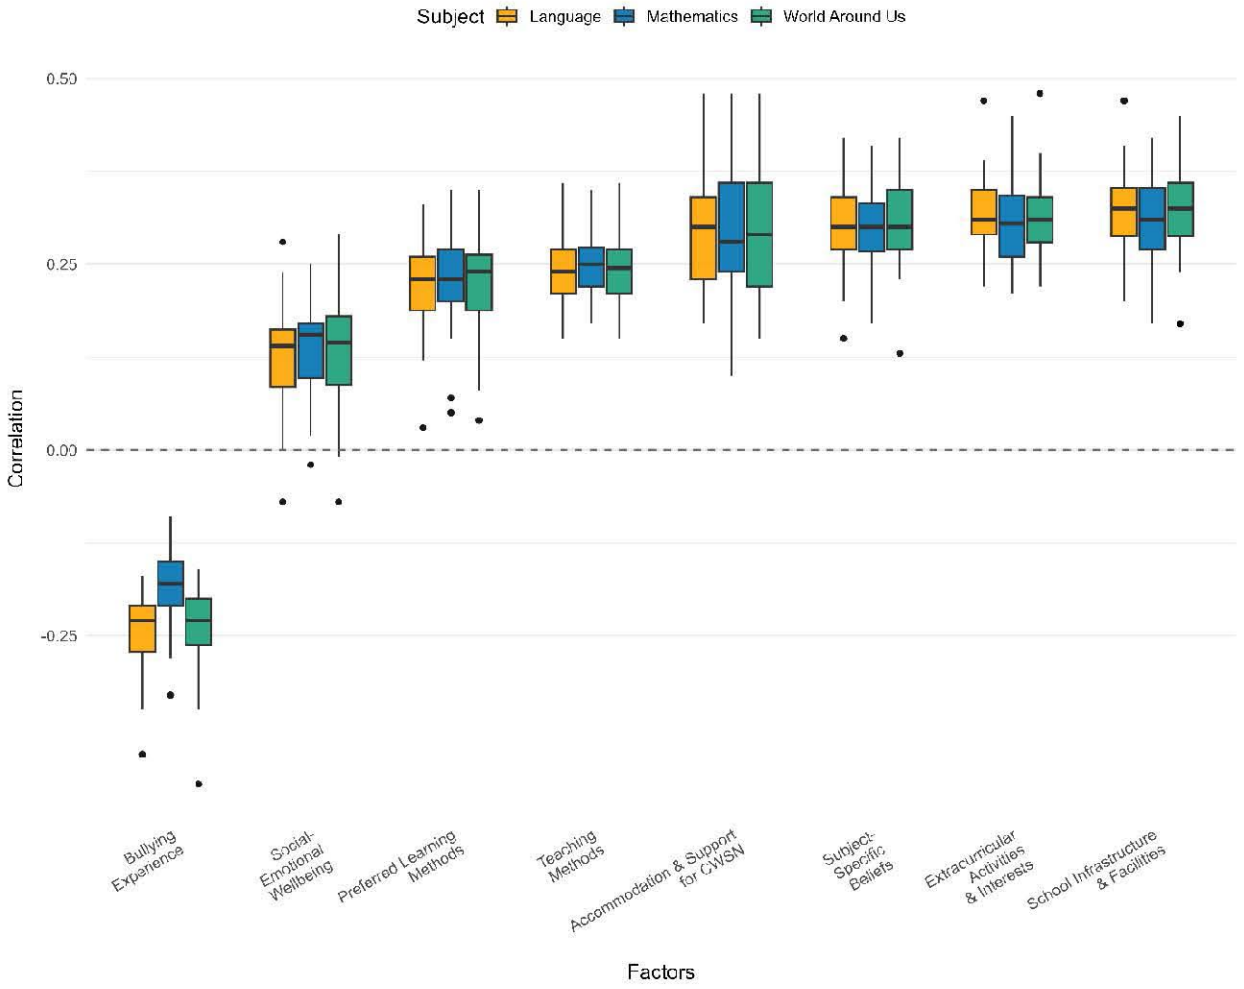

Overall, the results align with educational theory and show patterns consistent with Grade 9, highlighting the meaningful relationship between students' school experiences and their academic outcomes:

- Most factors demonstrated positive correlations with achievement scores, suggesting that supportive teaching practices, engaging environments, and adequate infrastructure collectively contribute to better learning outcomes.
- **Bullying Experience** consistently showed negative associations with achievement, underlining the detrimental impact of adverse school climates on student performance.
- **Social-Emotional Wellbeing** maintained a positive, though more modest, correlation, indicating an indirect but significant role in sustaining academic engagement.
- **Accommodation & Support for CWSN** showed positive correlations for students identified as CWSN. This pattern is consistent with Grade 9 findings.

To examine geographic variability, Figure 12.6 shows state-wise distributions of these correlation coefficients. The results reveal that while positive and negative directions of association were largely consistent nationally, the magnitude varied substantially across states. This variation highlights how local educational contexts and resource availability can shape the effectiveness of these school experience factors in supporting learning outcomes. For example, while the national-level correlation between School Infrastructure & Facilities and test scores was positive, some states showed relatively weaker or stronger associations, indicating differential access to school resources and their impact.

Figure 12.6

State-wise Variation in Correlations Between School-Related Factors and Cognitive Scores Grade 6

Such evidence is valuable for informing state- and district-level educational planning, enabling targeted strategies to improve learning conditions, promote engagement, and reduce barriers such as bullying across diverse contexts.

12.3.3 Grade 3

Final Factor Structure, Descriptive Statistics, and CFA Results

The eight-factor structure validated in Grades 6 and 9 was also tested for Grade 3. Confirmatory Factor Analysis supported its overall applicability, with acceptable fit indices for all factors. As in Grade 6, the Social-Emotional Wellbeing factor contained five items tailored for younger students, maintaining developmental appropriateness while ensuring structural comparability across grades. The inter-item correlation plot and EFA scree plots for Grade 3 are shown in Annex.

Table 12.7 shows the descriptive statistics for Grade 3 factor scores, calculated using factor sums. Means were generally consistent with older cohorts, with slight reductions observed in areas like Teaching Methods and School Infrastructure & Facilities, likely reflecting younger students' limited exposure or understanding of these school aspects. Subject-Specific Beliefs and Feelings and Preferred Learning Methods continued to show wide variability, indicating active engagement even at early primary levels. As with higher grades, Bullying Experience and Accommodation & Support for CWSN retained low mean scores and limited dispersion, reflecting expected prevalence patterns.

Table 12.7

Descriptive statistics of the factors extracted (Grade 3)

Factor	Description	No. of items	Maximum Score	Mean	SD
Preferred Learning Methods	Students' preferences for different instructional approaches	5	10	6.39	2.91
Teaching Methods	Strategies and pedagogical approaches used by teachers to facilitate learning.	4	4	2.98	1.16
Subject-specific Beliefs and Feelings	Students' attitudes, preferences, and emotional engagement with various academic and non-academic subjects	9	18	10.95	4.70
Extracurricular Activities & Interest	Preferences for creative, physical, social, and digital activities beyond academics	8	8	6.55	1.92
School Infrastructure & Facilities	Availability of essential school resources, including sanitation, drinking water, electricity, sports facilities, meals, and laboratory access	5	5	4.14	1.31
Accommodation & Support for CWSN	Availability of assistive devices, teacher and peer support, and family assistance for students with special educational needs	4	4	3.07	1.24

Socio-Emotional Wellbeing	Students' emotional health, stress levels, social connectedness, confidence, and ability to manage emotions and seek support	5	25	17.55	4.34
Bullying Experience	Exposure to and perceptions of bullying incidents in school settings.	5	5	1.46	1.59

Note: CWSN = Children With Special Needs

Internal consistency estimates and CFA fit indices are presented in Table 12.8 Cronbach's alpha values ranged from .53 to .82, with slightly lower reliability for Teaching Methods and Social-Emotional Wellbeing compared to older cohorts. Nonetheless, all factors met model fit criteria and were retained to ensure conceptual continuity across different grades.

Table 12.8

Results of Confirmatory Factor Analysis (Grade 3)

Model	Cronbach's α	RMSEA	SRMR	CFI	GFI
Preferred Learning Methods	.77	.069	.024	.98	.991
Teaching Methods	.53	.049	.017	.982	.998
Subject-specific Beliefs and Feelings	.82	.07	.038	.939	.968
Extracurricular Activities & Interest	.69	.056	.034	.935	.984
School Infrastructure & Facilities	.66	.056	.025	.972	.993
Accommodation & Support for CWSN	.65	.036	.014	.995	.985
Socio-Emotional Wellbeing	.56	.043	.02	.974	.996
Bullying Experience	.76	.069	.025	.978	.99

Note: CWSN = Children With Special Needs

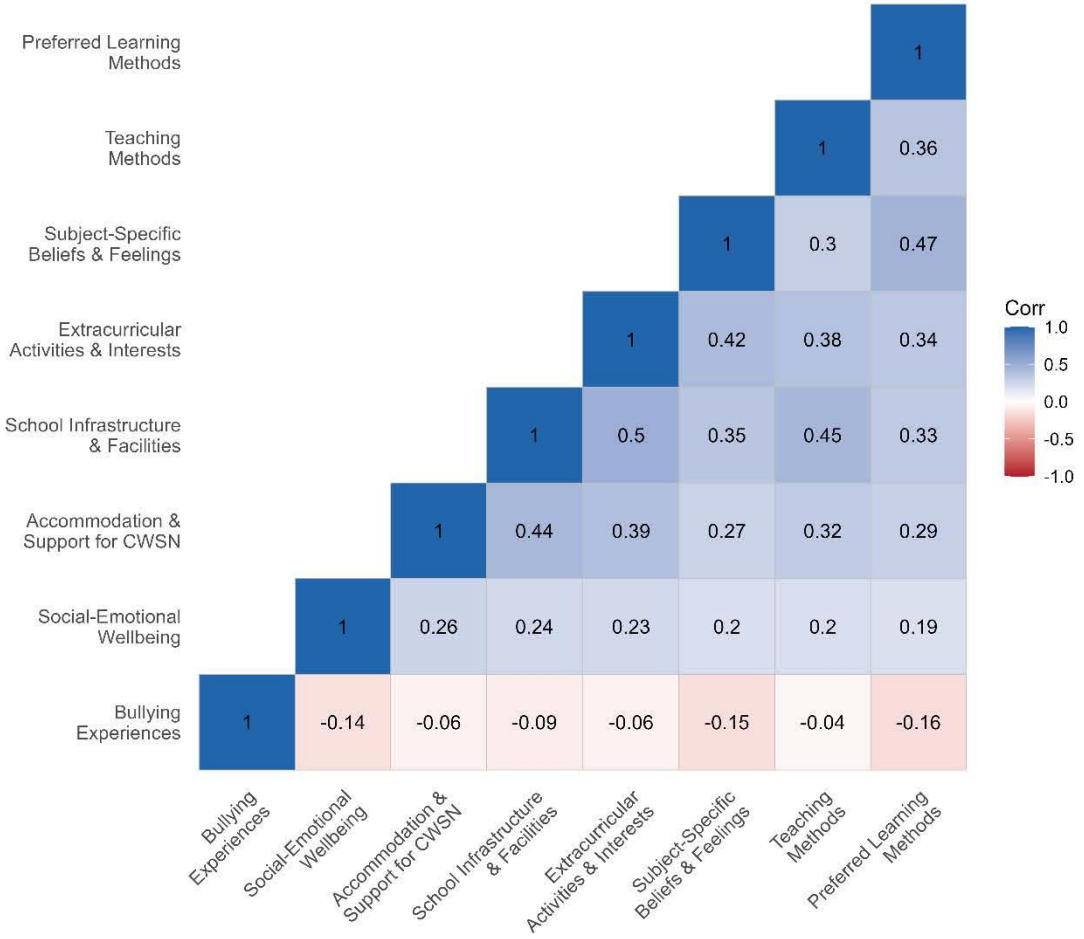

Inter-Factor Correlations

Figure 12.7 displays the inter-factor correlation matrix for Grade 3, based on factor sums. Overall, correlations were somewhat weaker than those observed in Grades 6 and 9, consistent with developmental differences in self-awareness and comprehension among younger students.

Key relationships—such as the link between *Teaching Methods* and *School Infrastructure & Facilities*, or between *Preferred Learning Methods* and *Subject-Specific Beliefs and Feelings*—remained evident across all grades.

Figure 12.7

Inter-Factor Correlation for PQ (Grade 3)

Compared to older cohorts, Grade 3 exhibits broadly similar but slightly weaker inter-factor relationships, reflecting the early developmental stage of these students. *Extracurricular Activities & Interests* correlated with *School Infrastructure & Facilities* (*r* = .50) and *Subject-Specific Beliefs & Feelings* (*r* = .42), highlighting links between engagement, attitudes, and resources. *Preferred Learning Methods* and *Teaching Methods* also showed moderate associations with infrastructure (r = .33 and r = .45). *Bullying Experiences* remained weakly negative across domains, and *Accommodation & Support for CWSN* displayed positive relationships with all factors similar to other grades. Overall, the factor structure remains stable and conceptually coherent even at early grades. The Inter-Factor Correlation table is added in Annex.

Correlation with Achievement

Correlations between the eight school-related factors and students' scores in Mathematics and Language are summarized in Table 12.9

Table 12.9

Correlations of School-Related Factors with Students' Cognitive Test Scores for Grade 3

Model	Mathematics	Language
Preferred Learning Methods	.21	.20
Teaching Methods	.18	.16
Subject-specific Beliefs and Feelings	.23	.23
Extracurricular Activities & Interest	.24	.24
School Infrastructure & Facilities	.24	.23
Accommodation & Support for CWSN	.27	.26
Socio-Emotional Wellbeing	.19	.18
Bullying Experience	-.18	-.18

Note: CWSN = Children With Special Needs

The overall pattern aligns with results from Grades 6 and 9:

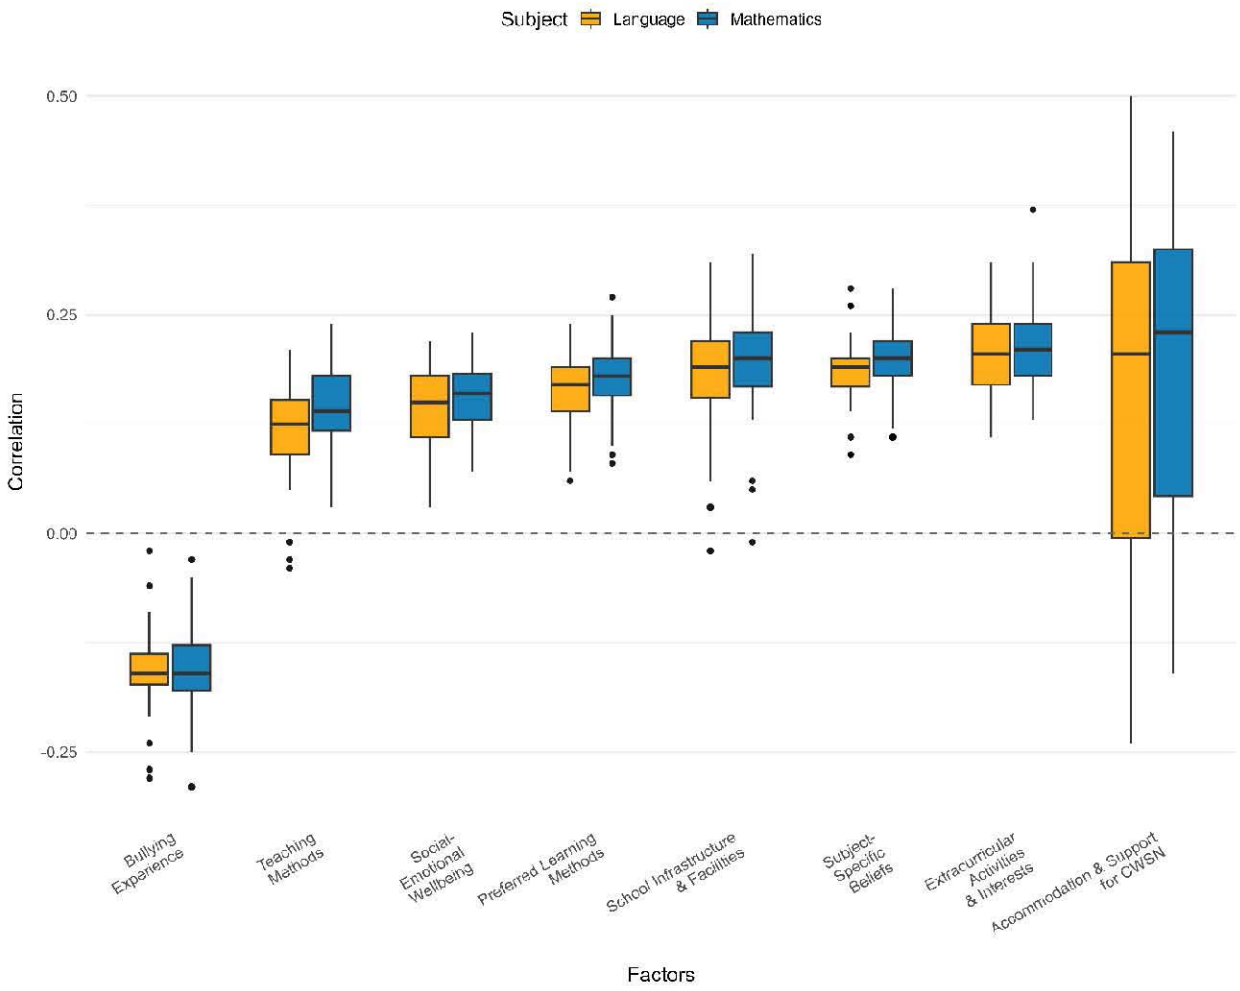

- Positive correlations for most factors consistent with the broader importance of supportive, engaging, and well-resourced school environments in fostering early academic skills.
- Negative correlations with Bullying Experience remain consistent across grades, underscoring its possible detrimental role in learning.
- Accommodation & Support for CWSN again showed that such supports are associated with better student performance for students identified as having special needs. Only a small subset of students (6,054 out of 599,026 Grade 3 students surveyed) were so identified in the data and no students were identified in 22 states and Union Territories.

State-wise variability in these relationships was also evident. Figure 12.8 illustrates how the strength of associations differed across States and Union Territories, reinforcing the influence of local contexts and highlighting the value of tailored, context-sensitive educational planning. For the boxplots, States and Union Territories with fewer than 100 students responding to items related to any given factor were excluded to ensure reliability of the estimates. The boxplots for Grade 3 for the *Accommodation & Support for CWSN* factor are noticeably wider than those for other factors or grades. This wider

spread partly reflects that only 14 States and Union Territories had sufficient data (more than 100 student responses) for this factor.

Figure 12.8

State-wise Variation in Correlations Between School-Related Factors and Cognitive Scores – Grade 3

The box plot shows considerable variation across States and Union Territories, with some states showing stronger or weaker relationships than the national average. This variation suggests that the influence of school-related factors is shaped by local contexts, infrastructure, and implementation environments.

12.3.4 Cross-Class Consistency

Cross-class correlations were also examined for the associations of eight school related factors with students' achievement scores in Mathematics and Language. Figures 12.9 and 12.10 present these correlations for Grade 3, 6 and 9, offering a comparative view of factor–achievement relationships across grades.

Figure 12.9

Correlation Between School-Related Factors and Mathematics Scores (Grades 3, 6 and 9)

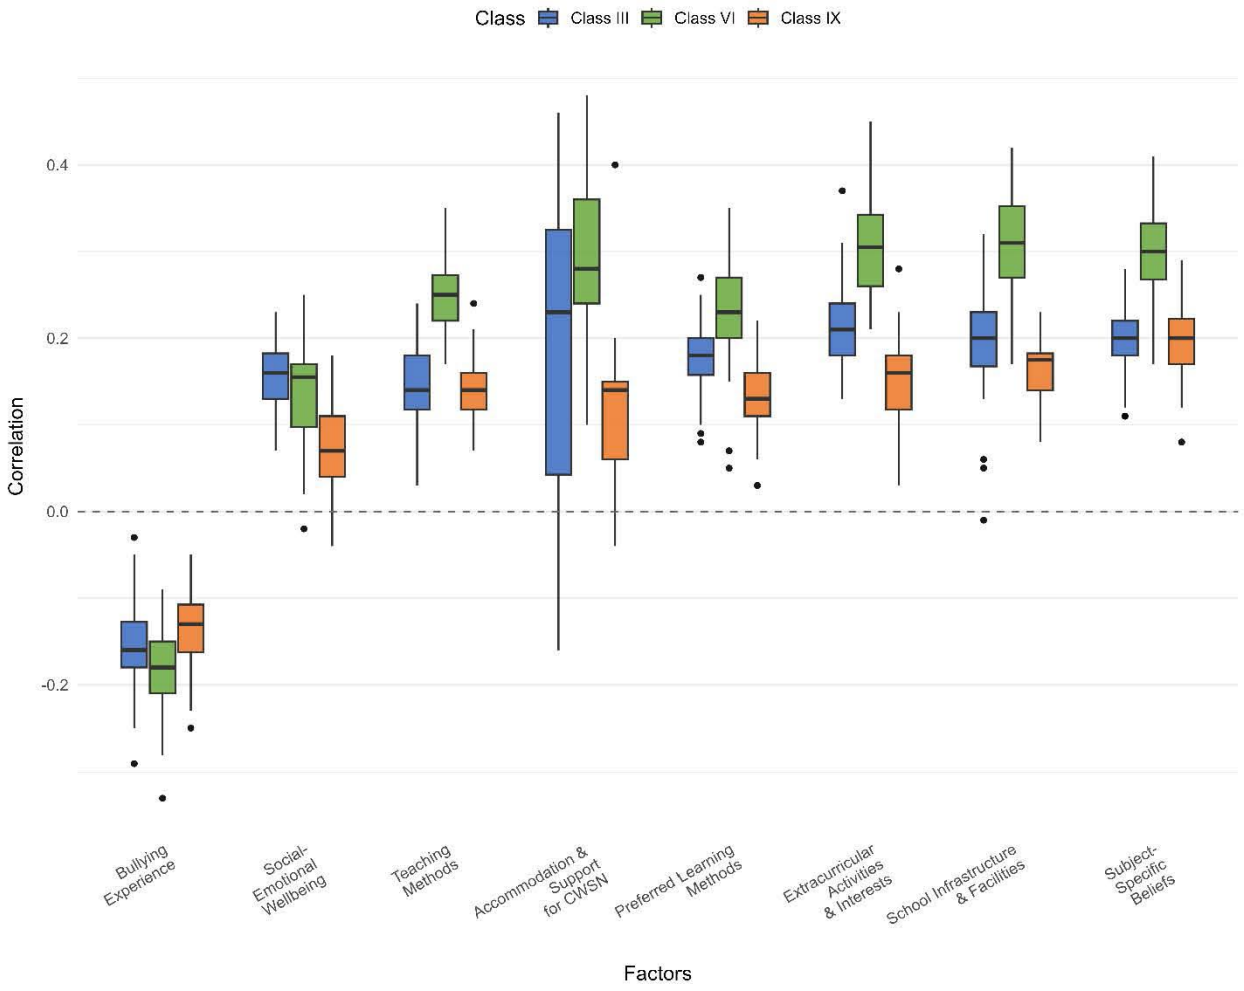

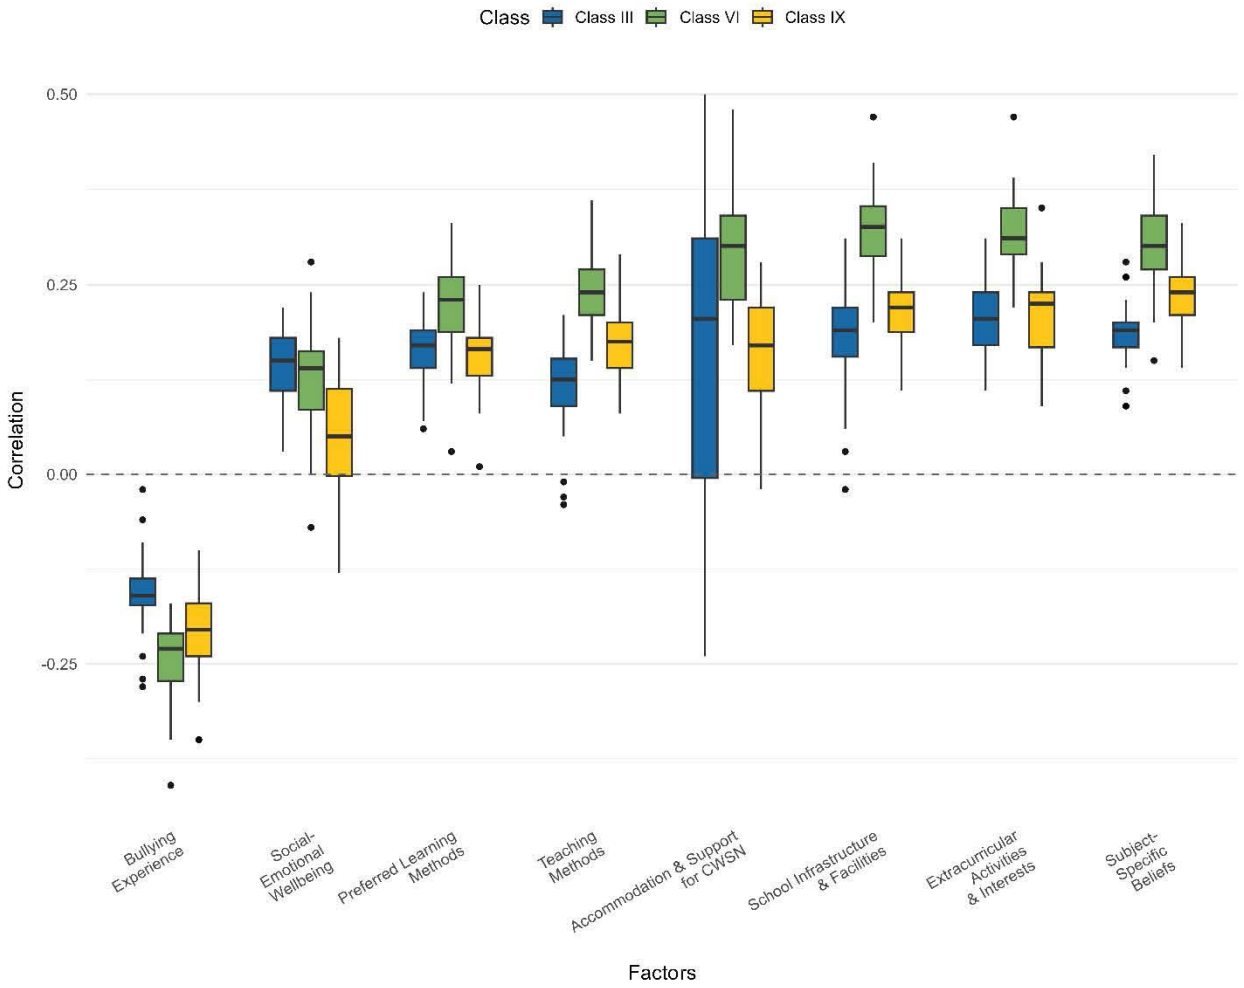

Figure 12.10

Correlation Between School-Related Factors and Language Scores (Grades 3, 6 and 9)

Overall, the results demonstrate that the strength and direction of correlations are highly consistent across grades, supporting the conceptual stability of the factor structure throughout the primary and secondary stages. A few high-level observations emerge from this cross-class analysis are given here:

- Positive associations for most factors remain stable across Grades 3, 6 and 9, reinforcing the interpretation that supportive teaching practices, engagement opportunities, and adequate school infrastructure are universally important for student learning outcomes.
- Subject-Specific Beliefs and Feelings, School Infrastructure & Facilities, and Extracurricular Activities & Interests consistently show the strongest positive correlations with achievement across both Mathematics and Language, highlighting their importance in promoting learning across ages.

- Bullying Experience maintains its negative association with achievement at all grade levels, reaffirming its role as a critical barrier to student learning that must be addressed through policy and school-level interventions.
- Teaching Methods, Preferred Learning Methods, and Social-Emotional Wellbeing display positive but somewhat more moderate correlations across class, suggesting their supportive role in learning environments, with some expected variation due to developmental differences.
- Accommodation & Support for CWSN shows correlations positive correlation with performance for the small subset of students identified in the data as CWSN in each class. There is box plot is wider among states and Union Territories in Grade 3 than the other grades in part because many states and Union Territories had less than 100 students identified as CWSN.

These cross-class results provide additional validation for including these factors in national assessments. They also reinforce the value of capturing student-reported school experiences to understand learning outcomes across varied age groups and contexts.

12.3.5 Analysis Summary

The analysis of PQ data for Grades 3, 6 and 9 reveals consistent and theoretically meaningful relationships between students' school-related experiences and their academic achievement. Positive associations were observed across class for factors capturing engagement, instructional alignment, and the availability of school resources and opportunities, while negative correlations with bullying experiences highlighted the importance of maintaining safe and inclusive learning environments.

Although these patterns were broadly stable nationwide, state-level variation in the strength of associations underscores the importance of local educational contexts and the need for tailored policy responses. This variation suggests that while certain factors are universally important for learning, their influence is shaped by differences in infrastructure, implementation, and school climate across states and regions.

While this section focused on school-based experiences, students' learning outcomes are also shaped by their home backgrounds and socio-economic conditions. In the next section, we turn to the development of a Socio-Economic Status (SES) Index, constructed from background questionnaire items on household resources, parental education, and occupation. By examining how SES is associated with cognitive performance, we aim to provide a more complete understanding of the multiple contexts influencing student learning in PARAKH Rashtriya Sarvekshan 2024.

12.4. Pupil Questionnaire Socio-Economic Status (SES) Index Analysis

Socio-Economic Status (SES) is a foundational contextual factor that may influence student learning outcomes and educational equity. In PARAKH Rashtriya Sarvekshan 2024, a new SES Index was created as a key background variable for understanding differences in student achievement across social and geographic groups, and for guiding the development of more inclusive, needs-responsive education policies. This section describes the conceptual framework, components, construction methodology, and validation results of the SES Index developed for PARAKH Rashtriya Sarvekshan 2024.

12.4.1 Conceptual Framework and Rationale

The SES index in PARAKH Rashtriya Sarvekshan 2024 is conceptualized as a multidimensional measure capturing students' access to economic, social, and cultural capital. The approach was informed by national and international surveys such as the National Assessment of Educational Progress (NAEP) in the United States (Broer et al., 2023; NCES, 2024) and the Programme for International Student Assessment (PISA) (Avvisati, 2020; OECD, 2024), while also being carefully adapted to the Indian educational context.

The conceptual framework underlying the PARAKH Rashtriya Sarvekshan 2024 SES Index includes three key components:

- **Home Infrastructure & Learning Resources**: Material conditions in the home that enable or constrain learning, such as digital access, study space, and reading materials.
- **Parental Education**: The highest level of formal education attained by either parent, serving as a proxy for the household's educational capital.
- **Parental Occupation**: The presence of paid employment among parents, as an indicator of economic resources and employment stability.

Together, these three dimensions provide a robust and interpretable measure of household-level socio-economic positioning that is theoretically grounded and empirically validated for use in analyzing learning outcomes.

Figure 12.11 below illustrates the conceptual model adopted for the SES Index in PARAKH Rashtriya Sarvekshan 2024.

Figure 12.11

Conceptual Model Illustrating the three components of the Socio-Economic Status (SES) Index in PARAKH Rashtriya Sarvekshan *2024*

One specific challenge associated with the development and implementation of any robust SES index is data collection, particularly for younger children. In other surveys, it has been found that young students are often not as able to provide accurate responses to many of the questions and items that are used in constructing the SES index or its components (Broer et al., 2023; Jewsbury et al., 2016).

Thus, to account for potential limitations of measuring SES based on responses from younger respondents, data for students in Grades 6 and 9 were used as a starting point to construct and validate the new index. Analyses were then conducted for Grade 3, which revealed relatively higher rates of missing responses on household SES items compared to Grades 6 and 9, suggesting somewhat lower data quality. Analyses also revealed that the relationships between parent's education and proficiencies and between SES and proficiencies in language and mathematics were consistent across Grades 6 and 9. but quite different in Grade 3. While it is possible that the influence of SES on education may differ across grades, because of the sharp differences observed in the results.

Analyses and results are presented in detail in the next sections.

12.4.2 Components and Scoring Methods

Home Infrastructure & Learning Resources

This component represents the material conditions in students' home environments that can support or constrain learning. It includes access to basic infrastructure, learning space, digital tools, and educational materials. These items serve as proxies for the enabling conditions that facilitate academic engagement outside of school. International assessments such as PISA have also emphasized the role of such household-level resources as a key component of socioeconomic

background, and their inclusion in the SES index in PARAKH Rashtriya Sarvekshan 2024 reflects this alignment.

Item Review and Final Selection

A total of 14 items in the PQ were initially identified as potential contributors to this factor. These items spanned a wide range of home characteristics, including digital access, study conditions, and ownership of household goods. To determine the most conceptually and statistically suitable subset of items, an expert review process was conducted by the questionnaire experts. This process included four key criteria, drawing on both empirical analysis of the PARAKH Rashtriya Sarvekshan 2024 data and international best practices (e.g., PISA, NAEP):

1. **Internal Consistency:** Items were reviewed to assess how well they correlated with each other, ensuring that they collectively captured meaningful variation in home infrastructure and learning conditions. This helped ensure conceptual coherence among the selected items.
2. **Conceptual Relevance**: Items were evaluated against international benchmarks (e.g., PISA background frameworks) to ensure they reflected meaningful indicators of socioeconomic resources.
3. **Association with Student Achievement:** Empirical analysis of PARAKH Rashtriya Sarvekshan 2024 showed that 7 core items consistently demonstrated stronger, positive correlations with student achievement across states. Including all 14 items, they added noise, with some items showing weak or negative correlations. This approach aligns with best practice in large-scale assessments, which emphasize retaining only well-performing items to maintain predictive validity and comparability (Broer et al., 2023). A plot showcasing the variability amongst the correlation of each item with mathematics for one of the grades is shown below.

As an example, Figures 12.13 and 12.14 show the variability in the correlations of each item with mathematics and proportion of missing responses for Grade 9, respectively. Similar variability was also found for Grades 3 and 6.

Figure 12.13

State wise Variation in Correlations Between Items related to 'Home Infrastructure and Learning Resources' and Mathematics (Grade 9)

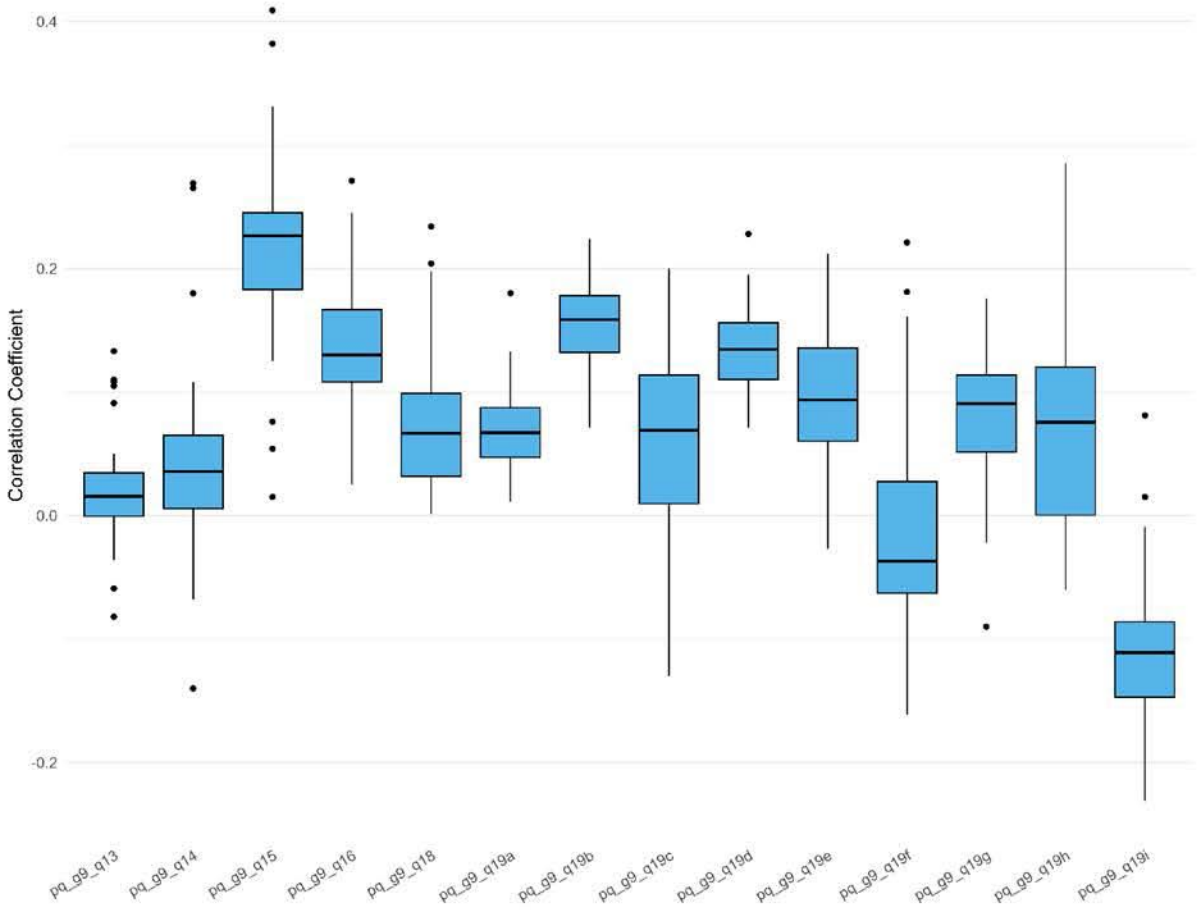

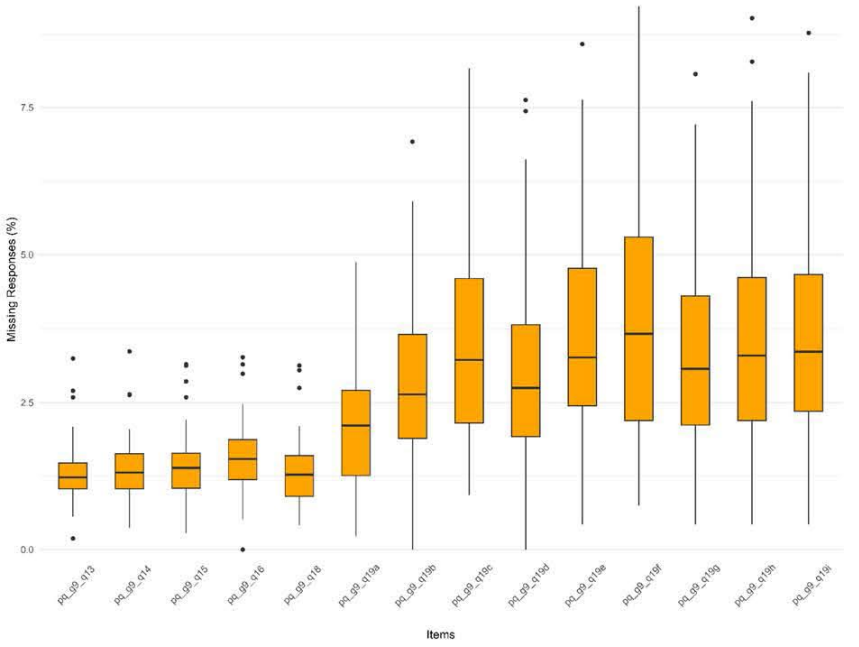

Figure 12.14

State wise Variation in Missing Responses Among items related to Home Infrastructure and Learning Resources (Grade 9)

Based on this multi-criteria review, a final set of seven items was selected by questionnaire experts. These items are listed in Table 12.11 below.

Table 12.11

Final list of items for Home Infrastructure and Learning Resources factor with their description

Item ID	Item Description	Coded Response Pattern
q15	How many digital devices (e.g., laptop, desktop, tablet, smartphone, TC) are there in your home?	0 = None, 1 = One, 2 = Two or three, 3 = Four or five, 4 = Six or more
q16	Do you have internet access at home?	0 = No, 1 =Yes
q18	How many books (other than textbooks) are there in your home?	0 =No books, 1 = Few (1-10), 2 = Enough to fill oneself (11-15), 3 = Enough to fill one bookcase (26-100), 4 = Enough to fill several bookcases (more than 100)
q19A	Which of the following do you have in your home? - A quite place to study	0 = No, 1 =Yes

q19B	Which of the following do you have in your home? - Electricity	0 = No, 1 =Yes
q19D	Which of the following do you have in your home? - Clean drinking water	0 = No, 1 =Yes
q19E	Which of the following do you have in your home? - Flush toilet	0 = No, 1 =Yes

This multi-criteria review ensured that the final 7-item set balances theoretical relevance, empirical performance, and practical feasibility, supporting a robust and comparable SES Index for PARAKH Rashtriya Sarvekshan 2024 and future cycles. All items were coded in a way that ensured higher values represented greater access to learning resources. For example, ordinal response categories (e.g., for books or digital devices) were coded to reflect increasing access (0-4), and binary items were consistently coded as 0 = No, 1 = Yes.

IRT Modelling and Score Generation

To derive a single latent score representing the Home Infrastructure and Learning Resources scale, an Item Response Theory (IRT) model was applied. Given the polytomous nature of several items part of the scale, the Generalized Partial Credit Model (GPCM; Muraki, 1992) was used. The analysis was conducted using the TAM package in R. The use of IRT was preferred over raw or sum scoring for several reasons:

- The selected items exhibited variability in missingness, with patterns also varying by state. IRT models can provide comparable latent trait estimates across students who respond to different sets of items as it occurs when not all items are answered, reducing the risk of bias from item non-response.
- The GPCM approach provides item-level discrimination and threshold estimates, allowing for a more accurate modelling of how each item contributes to the latent factor.
- This approach is also consistent with the methodology followed in large-scale assessments such as PISA, thereby maximizing alignment of PARAKH Rashtriya Sarvekshan methodology with internationally established large-scale assessment methodology

Expected A Posteriori (EAP) scores were computed for each student who responded to at least three items. The EAP scores were then standardized across the national sample to produce a **z**-score. This standardized variable was subsequently used as one of the three components of the SES index.

Parental Education

Parental education is a widely recognized proxy for the educational capital available within the household. For PARAKH Rashtriya Sarvekshan 2024, students reported on both parents' literacy and highest educational attainment. Responses were recoded to align with the International Standard Classification of Education (ISCED-2011; UNESCO, 2012), producing comparable values across diverse contexts. A derived variable representing the highest level of education attained by either parent was used in the SES Index, consistent with established practices in international assessments such as PISA and NAEP (OECD, 2024; Broer et al., 2023).

Item Structure and Recoding

The following items from the PQ included information on parental education:

- q02/q06: Can your mother/father read? (Response options: 1 = Yes, 2 = No, 3 = I don't know)
- q03/q07: What is the highest educational status of your mother/father? (Response options: 1 = No schooling; 2 = Grade 5; 3 = Grade 8; 4 = Grade 10; 5 = Grade 12; 6 = Diploma; 7 = Graduate; 8 = Postgraduate or above; 9 = I don't know)

To ensure international comparability, the education-level responses were recoded to match the International Standard Classification of Education (ISCED-2011) framework (UNESCO, 2012), producing values from 0 (No schooling) to 7 (Postgraduate degree). "Don't know" responses were coded as missing (NA).

Derivation of Final Variable

Rather than treating mother's and father's education levels as separate indicators, a derived variable was created representing the highest parental education level reported by the student. This approach follows the practice used in international assessments such as PISA, where the highest level of educational attainment in the household is often a stronger predictor of student outcomes than either parent's education alone (OECD, 2024; Broer et al., 2023).

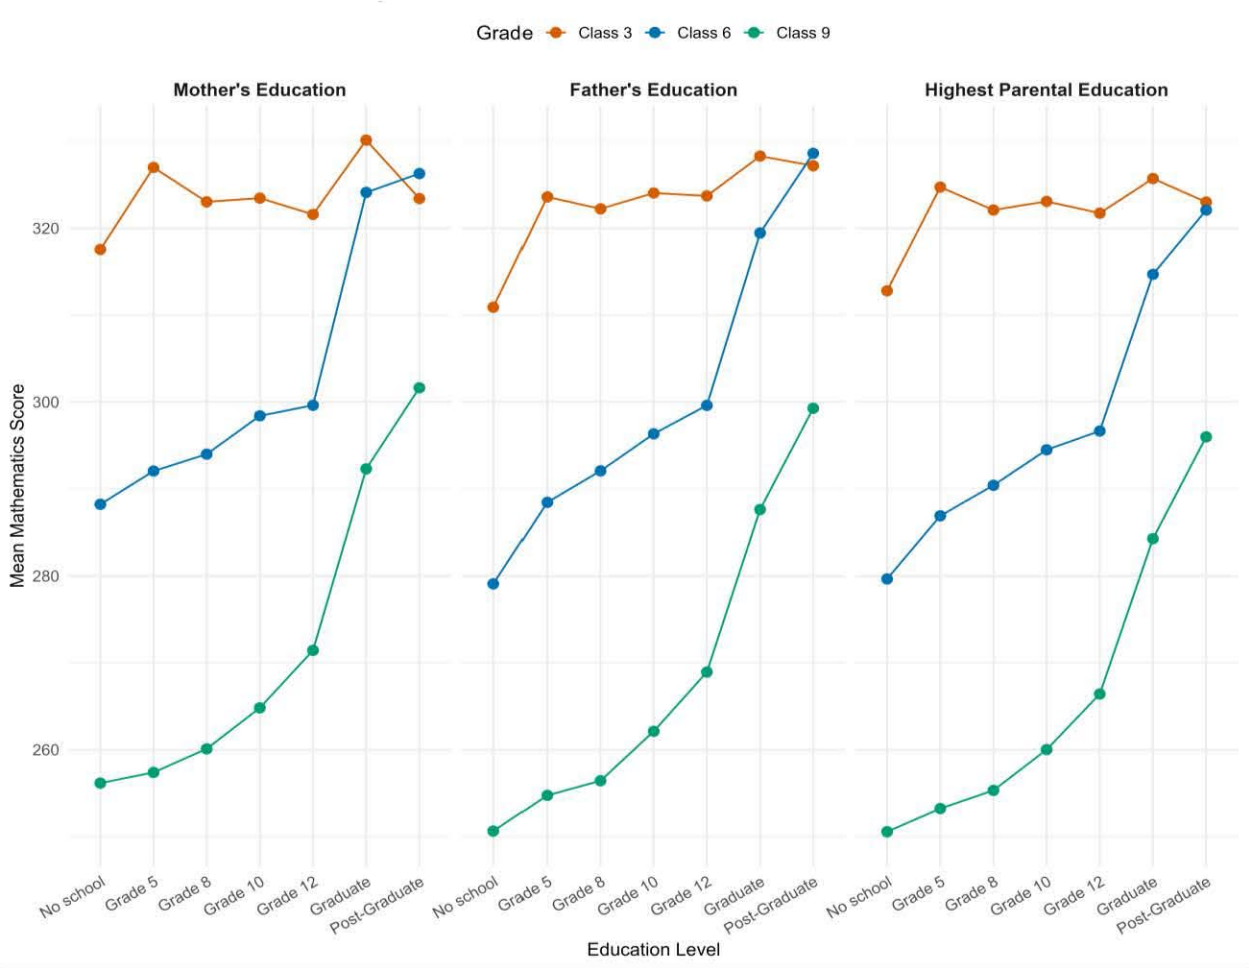

The final variable was then standardized at the national level to produce a z-score (**z_Highest_PEdu**), which served as one of the three components of the SES index.

External Validity Analyses

To assess external validity, students' mean mathematics scores were examined across levels of parental education. As shown in Figure 12.15, achievement levels generally increased with higher parental education in Grade 6 and 9, confirming theoretical expectations. For Grade 3, however, this pattern was notably weaker and less consistent, underscoring the need for cautious interpretation of SES results in younger grades.

Figure 12.15

Comparison of Mean Mathematics Scores by Highest Parental Education Level Across Grades 3, 6 and 9

Note: Grade 3 results should be interpreted with caution given the deviating pattern with Grades 6 and 9 and the age of the Grade 3 students.

Parental Occupation

Parental occupation is a key dimension of socioeconomic status, often used as an indirect measure of access to income, employment stability, and household economic positioning (Avvisati, 2020). In PARAKH Rashtriya Sarvekshan 2024, occupation-related information was collected through four questionnaire items—two each for the student's mother/female guardian and father/male guardian.

These included a binary item asking whether the parent had a paid job (q04 for mother, q08 for father), and a categorical item describing the type of work performed (q05 and q09, respectively).

The occupation type items (q05 and q09) were designed to capture a broad spectrum of work roles, reflective of the Indian labour market. However, the format of a single multiple-choice item for each parent limited the ability to derive a consistent, ordinal scale of occupational status. Given the diversity of job types and employment contexts across regions, these categories could not be aligned with international standards.

Additional analyses were conducted to explore whether combining occupation responses with parental education levels through interaction models could improve explanatory power or factor validity. However, these explorations did not result in clearer interpretation or improved predictive strength. These results underscore that while parental occupation is an essential dimension of SES capturing aspects of income flow and employment stability it may contribute less strongly than other components (e.g., education, home resources) and should be interpreted accordingly.

Derivation of Final Variable

To address these limitations while maintaining a meaningful occupational indicator, the SES index adopted a simplified binary approach. A derived variable was created to indicate whether at least one parent in the household had a paid job (1 = Yes, 0 = No). This measure provides valuable information on whether the family has any source of earned income, an essential aspect of socio-economic positioning. This approach was both statistically efficient and easier to interpret, and it minimized the risk of misclassification associated with inconsistent job-type responses.

As detailed in Section 1.2, the creation of this derived indicator involved resolving notable inconsistencies between students' responses to binary employment items (q04/q08) and the occupation-type items (q05/q09). In many cases, students indicated that a parent did not have a paid job but also selected a valid occupational category, or vice versa. A rule-based recoding process was applied to correct these inconsistencies, resulting in revised binary indicators for each parent. These recoded responses were then used to construct a single derived variable representing the highest parental occupation. The final binary indicator was standardized nationally to produce z_highest_POcc_status, which served as the third component of the SES index alongside home infrastructure and parental education.

All three standardized components—z_Home, z_Highest_PEdu, and z_highest_POcc_status—were then used in the SES Index construction detailed in Section 4.3

12.4.3 SES Index Construction Methodology

This section explains the process used to transform the three SES components Home Infrastructure & Learning Resources, Parental Education, and Parental Occupation into a single, composite index for PARAKH Rashtriya Sarvekshan 2024.

The SES Index was computed separately for all the grades to ensure that it accurately reflected developmental differences and contextual variations in the data. Each step followed international best practices while adapting to the Indian context, ensuring robust, interpretable, and policy-relevant results.

Data Preparation and Standardization

The first step involved converting each of the three SES components into standardized scores at the national level:

- **Home Infrastructure & Learning Resources** (z_Home)
- **Highest Parental Education** (z_Highest_PEdu)
- **Highest Parental Occupation Status** (z_highest_POcc_status)

Each of these variables was transformed into a z-score (mean = 0, standard deviation = 1) separately for each Grade.

This standardization ensured:

- Comparability across states with varying baseline conditions.
- Equal contribution scale for all components in subsequent analyses.
- Consistency with international large-scale assessment practices, such as PISA, which also employ standardized component scores before aggregation.

PCA Weighting and Index Calculation

After standardization, Principal Component Analysis (PCA) was applied to derive weights for combining the three components into a single SES Index.

PCA Approach

- Separate PCA models were estimated for Grade 6 and Grade 9.
- The first principal component in each case was retained as the SES Index.
- This approach identifies the linear combination of variables explaining the most variance in the data, ensuring empirical coherence.

The final SES Index was computed as:

SES Index = $(w_1 \times z_Home) + (w_2 \times z_highest_PEdu) + (w_3 \times z_highest_POccu_status)$

Where w_1, w_2, and w_3 are the PCA-derived loadings for each factor.

Weighting Results

Component loadings varied somewhat between Grade 6 and 9, reflecting developmental differences in how these background dimensions relate to each other and to student outcomes.

Table 12.12

PCA Loadings for SES Components

SES Factor	Grade 9	Grade 6	Grade 3
Home Infrastructure and Learning Resources	.66	.66	.67
Highest Parental Education	.67	.68	.68
Highest Parental Occupation Status	.34	.33	.30

These results highlight that Home Infrastructure & Learning Resources and Parental Education consistently showed higher weights. Contrary to them, Parental Occupation contributed less strongly. This pattern aligns with international evidence that occupation variables often contribute less strongly to composite SES indices (Broer et al., 2023). By applying these weights, the final SES Index provided a single, interpretable score representing students' relative socioeconomic positioning within their Grade and nationally.

12.4.4 Results and Validation

This section reports the results of SES Index construction and evaluates its empirical validity. Analyses were performed separately for Grades 3, 6 and 9 to capture Grade-specific patterns while maintaining methodological consistency.

12.4.4.1 Component Characteristics and Weights

Principal Component Analysis (PCA) was used to derive the weights for combining the three standardized SES components:

- Home Infrastructure & Learning Resources
- Highest Parental Education
- Highest Parental Occupation Status

PCA weights indicated that Home Infrastructure and Parental Education consistently contributed most strongly to the SES Index in all the grades, while Parental Occupation contributed more modestly. This pattern aligns with both theoretical expectations and observed empirical relationships in PARAKH Rashtriya Sarvekshan 2024, and international assessments (e.g., Broer et al., 2023), confirming that material and educational resources are primary drivers of socioeconomic variation relevant to student outcomes.

Association with Student Achievement

To assess the explanatory value of the SES Index and its components, two complementary analyses were conducted: stepwise regression and correlation with student achievement scores. These analyses were conducted for Grade 3, 6 and 9 to ensure transparent reporting across grades.

Variance Explained in Mathematics Scores

Stepwise linear regression models were used to evaluate how much variance in Mathematics scores could be explained by each SES factor, and by the full index. The models added the three factors sequentially in the following order: Home Infrastructure → Parental Education → Parental Occupation.

Table 12.13

R^2 from Stepwise Regression Predicting Mathematics Scores

SES Factor	Grade 9	Grade 6	Grade 3
Home Infrastructure and Learning Resources	.0820	.0775	.0008
+ Parental Education	.1042	.0814	.0004
+ Parental Occupation	.1045	.0824	.0002

Note: Extremely low R^2 values in Grade 3 indicate limited explanatory power of SES components for these students.

These results show that SES factors collectively explained 10.4% of the variance in Grade 9 and 8.2% in Grade 6 Mathematics scores. Among the components, Home Infrastructure and Parental Education were the strongest contributors, while Parental Occupation added only marginally to the explained variance. In contrast, SES Index results for Grade 3 demonstrated extremely low explanatory value.

Notably, these results align well with other international assessments. For instance, the Economic, Social and Cultural Status (ESCS) index explained between 12% and 16% of the variance in reading,

mathematics, and science achievement across OECD countries in the PISA 2022 report, highlighting similar patterns of moderate SES achievement association in upper grades (Enchikova et al., 2025).

Correlations with Achievement Scores

To validate the SES index further, Pearson correlations were computed between:

- Each individual SES factor and Mathematics scores (statewise and national averages)
- The full SES index and subject-wise achievement scores

This approach follows standard validation practices in large-scale assessments such as PISA and NAEP (OECD, 2024; Broer et al., 2023), which examine whether SES indices demonstrate meaningful, interpretable associations with student learning outcomes.

Component-wise correlations with Mathematics scores are shown below. Home Infrastructure & Learning Resources and Parental Education consistently showed moderate positive correlations in Grades 6 and 9, while Occupation had weaker associations. Grade 3 showed notably lower correlations across all components.

Table 12.14

Average Correlations of SES factors with Mathematics

SES Factors	Grade 9	Grade 6	Grade 3
Home Infrastructure and Learning Resources	.27	.29	.03
Highest Parental Education	.26	.22	.04
Highest Parental Occupation Status	.06	.05	.01

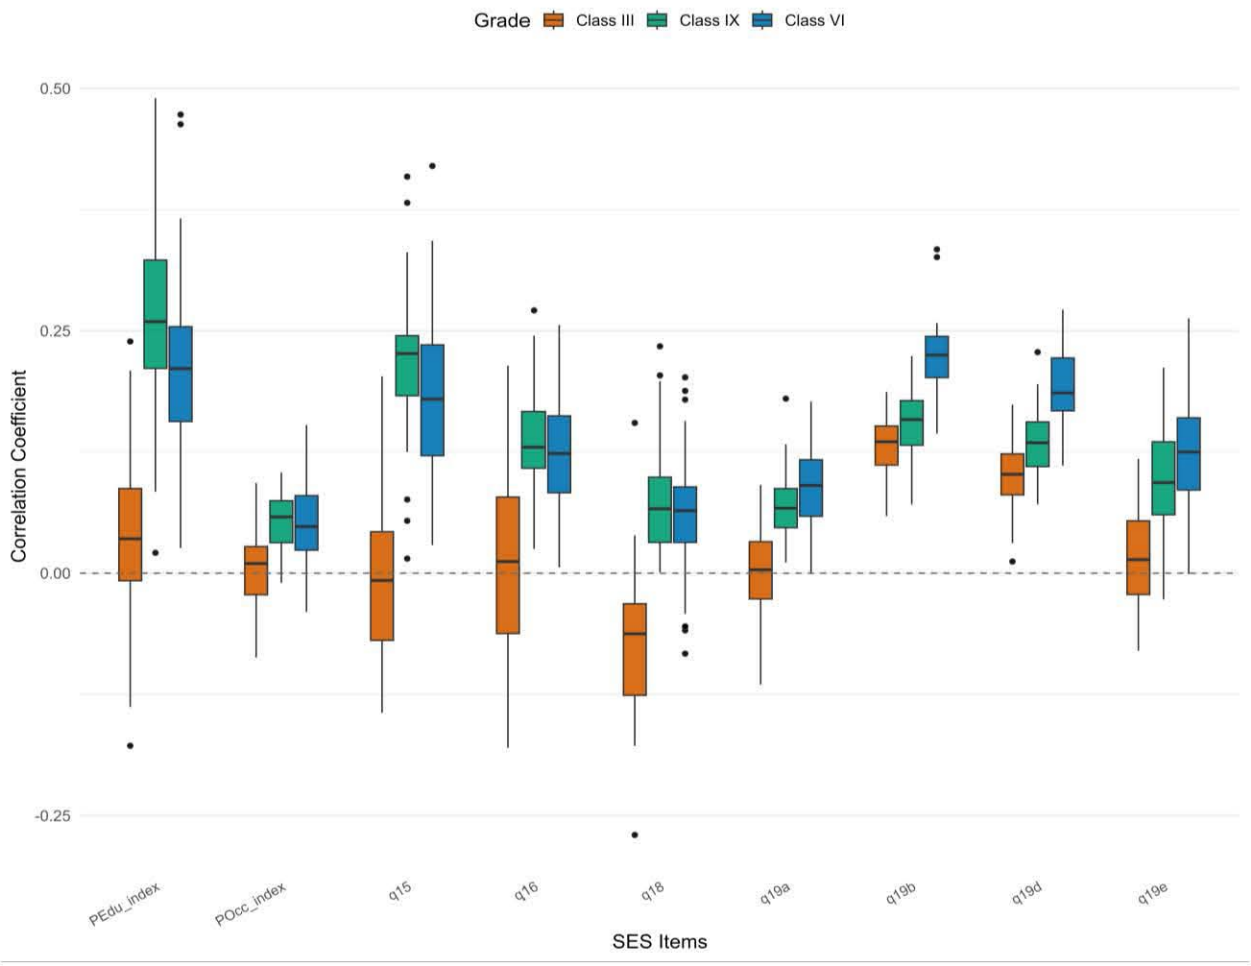

The results showed that both *Home Infrastructure and Learning Resources* and *Highest Parental Education* exhibit moderate, positive associations with Mathematics achievement in Grade 6 and 9. These findings align with theoretical expectations and support the robustness of these components within the SES Index framework. In contrast, *Parental Occupation* demonstrated weak correlations in all grades. This pattern aligns with international evidence that occupation variables often contribute less strongly to composite SES indices (Broer et al., 2023).

However, it is crucial to note that the strength of association was reduced in Grade 3 across all three components, with correlations close to zero. This suggests that socio-economic indicators, as reported by younger students, may have limited explanatory power at this developmental stage. These patterns confirm that the results for SES are more meaningful for Grade 6 and Grade 9 and highlight the need for caution when interpreting Grade 3 results.

To explore these trends further, item-level correlation variability was examined across states for each item and indices related to SES.

Figure 12.16

State-wise Variability of Correlations: SES Items with Mathematics (Grades 3, 6 and 9)

The patterns in Figure 12.16 reinforce earlier findings: SES items related to home infrastructure and parental education show moderate and relatively consistent correlations in Grade 6 and 9. However, in contrast, Grade 3 displayed much weaker and more dispersed associations, with several items yielding near-zero or negative correlations. This pattern holds across item types, including items from home infrastructure and learning resources and indices for parental education and occupation. Thus, while SES indicators in Grade 3 are included for completeness and exploratory use, their low correlation with achievement supports the need for cautious interpretation.

Finally, Pearson correlations between the final SES Index and overall subject scores were computed at the national level for each class. This showed a broader view of the SES achievement relationship beyond Mathematics alone and facilitates cross-subject comparisons.

Table 12.15

National Level Average Correlation Between Final SES Index and Subject Scores

Grade	Subject	Average Correlation
9	Mathematics	.32
	Language	.42
	Science	.39
	Social Sciences	.36
6	Mathematics	.25
	Language	.30
	World Around Us	.26
3	Mathematics	.00
	Language	.03

The results reveal that the SES Index demonstrated consistent and meaningful correlations with achievement across all subjects in Grade 6 and 9, with the highest associations observed for Language and Science in Grade 9. In contrast, the correlations observed in Grade 3 were substantially lower, further underscoring earlier findings that SES indicators at this level have limited

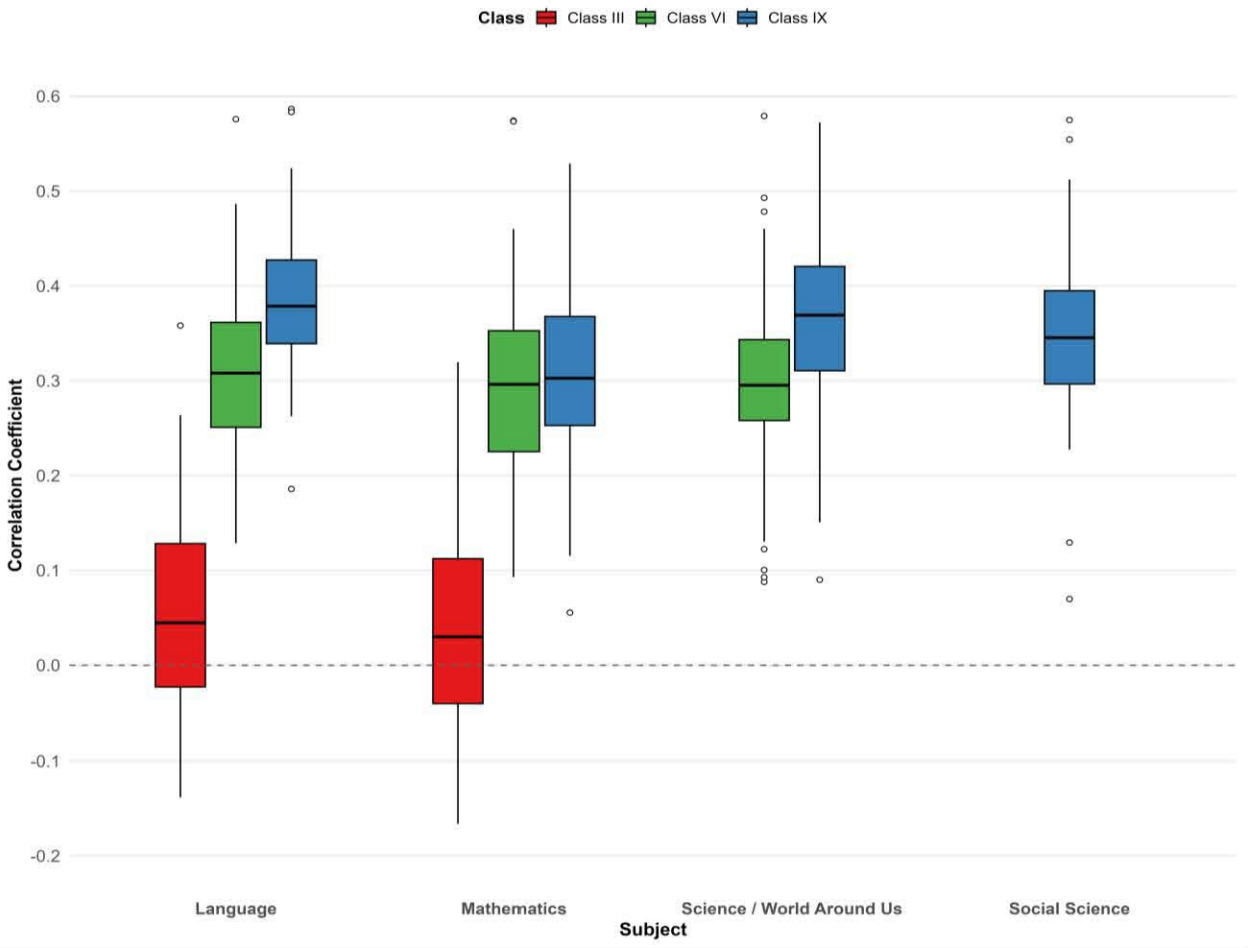

explanatory power. These results highlight the robustness of the SES Index in middle and secondary stage students while suggesting that its use in early grades should be interpreted with caution and primarily for exploratory purposes.

13.4.4.3 State-Level Variation in Associations

Finally, analyses explored how SES achievement relationships varied across India's 36 States and Union Territories. Figure 12.17 summarizes the state-level correlations by grade and subject.

Figure 12.17

State wise Variation in Correlations Between SES Index and Subject Scores (Grade 3, 6 and 9)

The combined boxplot highlights clear differences in the strength and consistency of SES–achievement relationships across grade levels. For Grade 6 and 9, the SES Index showed stable and

positive correlations with achievement across all subjects, aligning with the national averages reported earlier in Table 12.15. The correlations for Grade 3 were much lower and showed higher variation across states. In both Language and Mathematics, several states display near-zero or even negative associations, with correlations ranging from –.17 to .36 for Grade 3. These patterns reinforce earlier observations about the limited explanatory strength of SES indicators at this stage and are consistent with findings from international assessments that emphasize the challenges of measuring household-level background characteristics reliably among younger students. While Grade 3 SES results are retained for completeness, they should be interpreted cautiously and not used for cross-state comparisons or policy targeting.

12.4.5 Analysis Summary

The Socio-Economic Status (SES) Index developed for PARAKH Rashtriya Sarvekshan 2024 offers a robust, multidimensional measure of students' socioeconomic background by combining standardized indicators of home infrastructure and learning resources, highest parental education, and parental occupation status. This approach aligns with national and international surveys such as PISA and NAEP, while being carefully adapted to India's context through the selection of culturally relevant items and the use of data-driven weighting methods.

Validation analyses confirmed that the SES Index performs well overall. For Grade 6 and 9, the index demonstrated moderate, consistent positive associations with achievement across Mathematics, Language, Science, Social Sciences, and World Around Us. These results suggest the index effectively captures meaningful socio-economic gradients in learning outcomes at these age levels, supporting its use as a valuable contextual variable for understanding equity, informing state-level planning, and targeting resources to reduce learning gaps. By identifying where socio-economic factors most strongly influence achievement, policymakers can design better-focused, evidence-based interventions to support disadvantaged students.

For Grade 3, SES Index results are also included. However, the associations with achievement for this age group were substantially weaker and less consistent across states, with median correlations close to zero. This pattern may be attributed to known challenges in collecting relevant socio-economic data from younger children, who may have limited understanding of their household resources, parental education, or employment as it has been the case with national and international large-scale assessments. Consequently, Grade 3 SES results should be interpreted cautiously and viewed primarily as descriptive and exploratory, useful for refining future data collection strategies.

By systematically capturing key dimensions of students' home and family environments, the SES Index in PARAKH Rashtriya Sarvekshan 2024 provides policymakers, educationists, and researchers with a useful tool for understanding and addressing educational disparities. Ensuring all students

regardless of background have equitable opportunities to learn is essential for building a stronger, more inclusive education system.

12.5. Teacher Questionnaire (TQ) Analysis

The Teacher Questionnaire (TQ) in PARAKH Rashtriya Sarvekshan 2024 was designed to capture key aspects of teachers' professional practices, school environments, and perceptions relevant to student learning outcomes. Administered nationally to over 270,000 teachers, the instrument comprised 28 questions with 96 individual items covering diverse domains such as NEP 2020 policy awareness, classroom assessment practices, student engagement strategies, teaching resources, professional development opportunities, workload, stress, and socio-emotional competence.

Unlike the PQ, the TQ was analysed as a single pooled dataset without grade-specific splits. While information about the grade levels taught was collected, the design and analysis aimed to represent overall school-level teaching conditions in aggregate.

This section summarizes the TQ-specific analytical process and results. General methodological details on data cleaning, factor analysis strategy, and scoring procedures are described in Section 2 and are not repeated here. Instead, the focus is on presenting the results specific to analysis of the TQ, including the final factor structure, descriptive statistics, inter-factor relationships, and associations with student cognitive achievement scores.

12.5.1 Overview of Data and Sample

The final analytic sample comprised responses from approximately 270,000 teachers across 36 states and union territories. The questionnaire featured both binary and Likert-type items. Recoding was applied uniformly to ensure that higher scores consistently represented greater presence, agreement, or intensity of the measured factors. Reverse-coded items were adjusted accordingly.

Of the 96 questionnaire items, 83 were selected for factor analysis after excluding demographic and background variables not intended for the development of latent factors. The analytic dataset was treated as a pooled, national sample without splitting by grade level, reflecting the design goal of assessing school-level teaching conditions as a unified factor.

All information about item content, response formats, and final factor assignments is documented in the Teacher Questionnaire Codebook prepared for PARAKH Rashtriya Sarvekshan 2024.

12.5.2 Final Factor Structure and Descriptive Statistics, and Reliability

The final TQ factor structure was developed through a rigorous, multi-step process designed to ensure both empirical robustness and theoretical coherence. From an initial pool of 96 TQ items (excluding demographic and sampling variables), 83 were selected for factor analysis.

Factors were finalized based on four key criteria: (i) results from Exploratory Factor Analysis (EFA), (ii) inspection of inter-item correlation patterns for each factor, (iii) assessment of internal consistency through Cronbach's alpha reliability estimates, and (iv) expert review to ensure theoretical relevance and conceptual alignment with international large-scale assessment frameworks. This integrated approach ensured that the resulting factors were both statistically sound and substantively meaningful.

These 11 finalized factors reflect key domains of interest in PARAKH Rashtriya Sarvekshan 2024, including NEP 2020 policy awareness and implementation, classroom assessment strategies, teacher job satisfaction, student-centered pedagogy, use of teaching resources, perceptions of student engagement, professional development, workload and stress, socio-emotional competence, school infrastructure challenges, and school-community engagement.

Table 12.16 below summarizes these factors, with the number of items, maximum possible scores, national level means and standard deviations, and Cronbach's alpha reliability estimates. The mean and standard deviations of the factor summed scores reveal variation across these factors, suggesting variations in teaching environments and experiences among teachers across India. For example, School Infrastructure Challenges displayed relatively high variability, indicating notable disparities in facilities and resources across states.

Reliability, assessed via Cronbach's alpha, showed most factors exceeding the .60 benchmark recommended in international assessments such as PISA (OECD, 2024). Even for the few factors with alpha values slightly below .60, the scores were close to this standard, and the factors were considered conceptually essential. Hence, all 11 factors were retained for analysis and reporting.

Table 12.16

Descriptive Statistics and Reliability for TQ Factors

Factor Name	Description	No. of Items	Maximum Score	Mean	SD	Cronbach's α
Awareness & Implementation of NEP	Teachers' familiarity with key policy documents and their adoption of recommended practices aligned with the National Education Policy (NEP) 2020	4	4	2.84	1.29	.73
Classroom Assessment Practices	Teachers' frequency of using diverse assessment tools and techniques—such as tests, observations, assignments, projects, and student self- or peer-	9	27	23.12	3.27	.77

	assessment—to monitor and support student learning in the classroom.					
Job Satisfaction	Teachers' overall sense of contentment and commitment toward their profession, including satisfaction with their current school, perceived societal value of teaching, and their willingness to continue in or recommend the profession.	8	24	19.44	3.42	.76
Perceived Student Engagement	Teachers' observations of how actively students participate in classroom activities, including individual work, discussions, reading practice, question-asking, and display of student work as indicators of engagement and involvement in learning.	5	15	13.7	1.72	.70
Professional Development	Teachers' involvement in formal training opportunities over the past year, including participation in programs offered by BRC/CRC, DIETs, NCERT, SCERT, SAMAGRA, and ICT-related training, reflecting their commitment to ongoing professional learning and skill enhancement.	6	6	1.59	1.46	.63
School Infrastructure Challenges	Teachers' views on barriers to teaching caused by inadequate facilities, including classrooms, seating, utilities, toilets, and building conditions.	10	15	3.23	3.9	.87
School-Community Engagement	Teachers' perceptions of how often local leaders, groups, or external partners support the school.	4	12	5.11	3.42	.80
Socio-Emotional Competence	Teachers' self-assessment of their emotional awareness, conflict resolution,	7	18	14.36	2.93	.61

	collaboration, and ability to support students' social-emotional learning.					
Student-Centered Teaching Approaches	Teachers' frequency of using experiential, arts-based, sports-integrated, and competency-focused methods to actively engage students.	5	15	11.72	2.48	.74
Teacher Workload & Stress	Teachers' perceptions of excessive workload, staff shortages, work-life balance, and stress related to non-teaching responsibilities.	7	11	4.1	2.42	.64
Teaching Resources & Tools	Availability and use of textbooks, kits, resource books, ICT, and other teaching aids to support effective instruction and student assessment.	7	17	12.9	3.16	.67

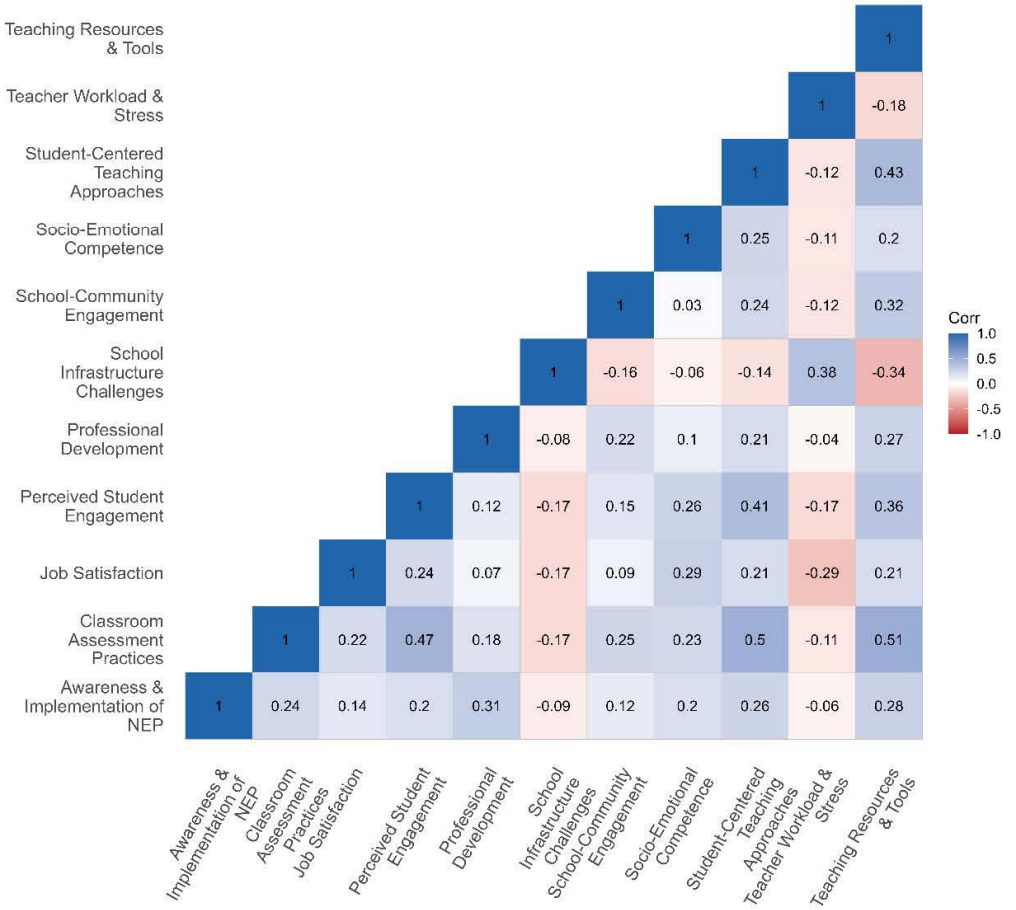

The final factor set demonstrated good reliability, inter-item correlations, and strong loadings in exploratory factor analysis (EFA), supporting their validity and interpretability for national reporting in PARAKH Rashtriya Sarvekshan 2024.

Inter-Factor Correlations

To explore the relationships among the 11 latent factors identified in the TQ, Pearson correlation coefficients were computed using national-level factor scores. The resulting inter-factor correlation matrix is visualized in Figure 12.18 Each cell in the heatmap represents the Pearson correlation coefficient between two TQ factors. Higher values (green) indicate stronger positive associations, while lower or negative values (red) indicate weaker or inverse relationships.

Figure 12.18

Inter-Factor Correlation Heatmap for TQ Factors

The correlations ranged from −.34 to .51, indicating moderate degrees of association across several factors. These results support the overall multidimensionality of the instrument, while also pointing to meaningful connections between conceptually related domains.

Classroom Assessment Practices showed strong positive correlations with both Perceived Student Engagement (r = .47) and Student-Centered Teaching Approaches (r = .50). This suggests a reinforcing relationship between assessment-informed instruction and pedagogical approaches that emphasize active student participation.

Teaching Resources & Tools was positively associated with several domains, including Student-Centered Approaches (r = .43), Classroom Assessment Practices (r = .51), and Professional Development (r = .27), *indicating* that access to instructional materials may co-occur with professional learning and active pedagogies.

Teacher Workload & Stress was negatively correlated with several other factors, including Job Satisfaction (r = −.29), Teaching Resources (r = −.18), and Student-Centered Approaches (r = −.12), reflecting the inverse relationship between excessive demands and positive professional conditions.

Awareness & Implementation of NEP displayed modest positive associations with Classroom Assessment Practices ($r = .24$), Student-Centered Teaching Approaches ($r = .26$), and Professional Development ($r = .31$), suggesting that familiarity with NEP 2020 is linked with progressive pedagogical practices.

School Infrastructure Challenges had consistently negative correlations with other factors, including Job Satisfaction ($r = -.17$), Student Engagement ($r = -.17$), and Teaching Resources ($r = -.34$), highlighting the isolating effects of inadequate infrastructure on overall teaching conditions.

The overall pattern of correlations is consistent with theoretical expectations and further supports the construct validity of the final TQ model. The moderate strength of most correlations confirms that the factors capture distinct but related aspects of teaching practice and environment.

From a policy perspective, these results point to several actionable insights. For instance, the strong association between student-centered teaching, classroom assessment practices, and perceived student engagement underscores the importance of integrated pedagogical training and resource support. Investments in teaching resources and professional development appear to have a reinforcing effect on effective classroom strategies. Conversely, negative correlations involving workload and infrastructure challenges highlight systemic pressures that may constrain teacher effectiveness and well-being. These findings suggest that improving teaching and learning conditions requires not only capacity-building initiatives but also structural reforms to reduce non-teaching burdens and improve basic infrastructure.

Association with Student Cognitive Outcomes

To examine the relationship between teaching conditions and student performance, teacher responses were linked with aggregate cognitive scores using school identifiers. Each TQ factor score was averaged at the school level and correlated with mean student scores in the corresponding school. This analysis was conducted separately for Grade 3, 6 and 9 across subjects such as Language, Mathematics, Science, Social Sciences, and The World Around Us.

The findings are presented in two parts: average correlations across India, followed by an analysis of variation across states.

National-Level Correlations

Table 12.17 summarizes the national-level correlations between each of the 11 TQ factors and student cognitive scores. Each value reflects the average school-level association across the national sample.

Table 12.17

Correlation between TQ Factors and Aggregate Student Cognitive Scores (National-Level)

	Grade 3		Grade 6			Grade 9			
Factor Name	Lang	Math	Lang	Math	WAU	Lang	Math	Sci	SS
Awareness & Implementation of NEP	.11	.14	.14	.18	.15	.16	.18	.18	.17
Classroom Assessment Practices	.09	.10	.09	.10	.09	.09	.09	.10	.09
Job Satisfaction	.08	.07	.03	.01	.03	.02	.02	.03	.04
Perceived Student Engagement	.11	.11	.10	.10	.11	.10	.11	.11	.11
Professional Development	.09	.10	.08	.09	.09	.09	.09	.09	.09
School Infrastructure Challenges	-.09	-.08	-.19	-.17	-.17	-.27	-.21	-.24	-.23
School-Community Engagement	.02	.02	.01	.02	.01	.06	.05	.06	.05
Socio-Emotional Competence	.12	.11	.12	.09	.13	.09	.09	.10	.11
Student-Centered Teaching Approaches	.09	.10	.06	.08	.08	.07	.11	.09	.09
Teacher Workload & Stress	-.10	-.08	-.06	-.04	-.07	-.10	-.09	-.10	-.10
Teaching Resources & Tools	.13	.12	.23	.23	.22	.24	.22	.24	.23

Note: Lang = Language, Math = Mathematics, WAU = World Around Us, Sci = Science, SS = Social Sciences

The correlation results showed in above table provided consistent patterns across class:

- Teaching Resources & Tools had the strongest positive correlates of student scores, with coefficients ranging from .12 in Grade 3 to .24 in Grade 9. These results suggest that classrooms where students are perceived as active participants tend to show better learning outcomes.
- School Infrastructure Challenges displayed negative associations with student performance, particularly in higher grades (e.g., −.27 with Grade 9 Language and −.24 with Grade 9

Science), pointing possible effect of infrastructural deficits that might accumulate or be more impactful on the learning requirements of later grades.

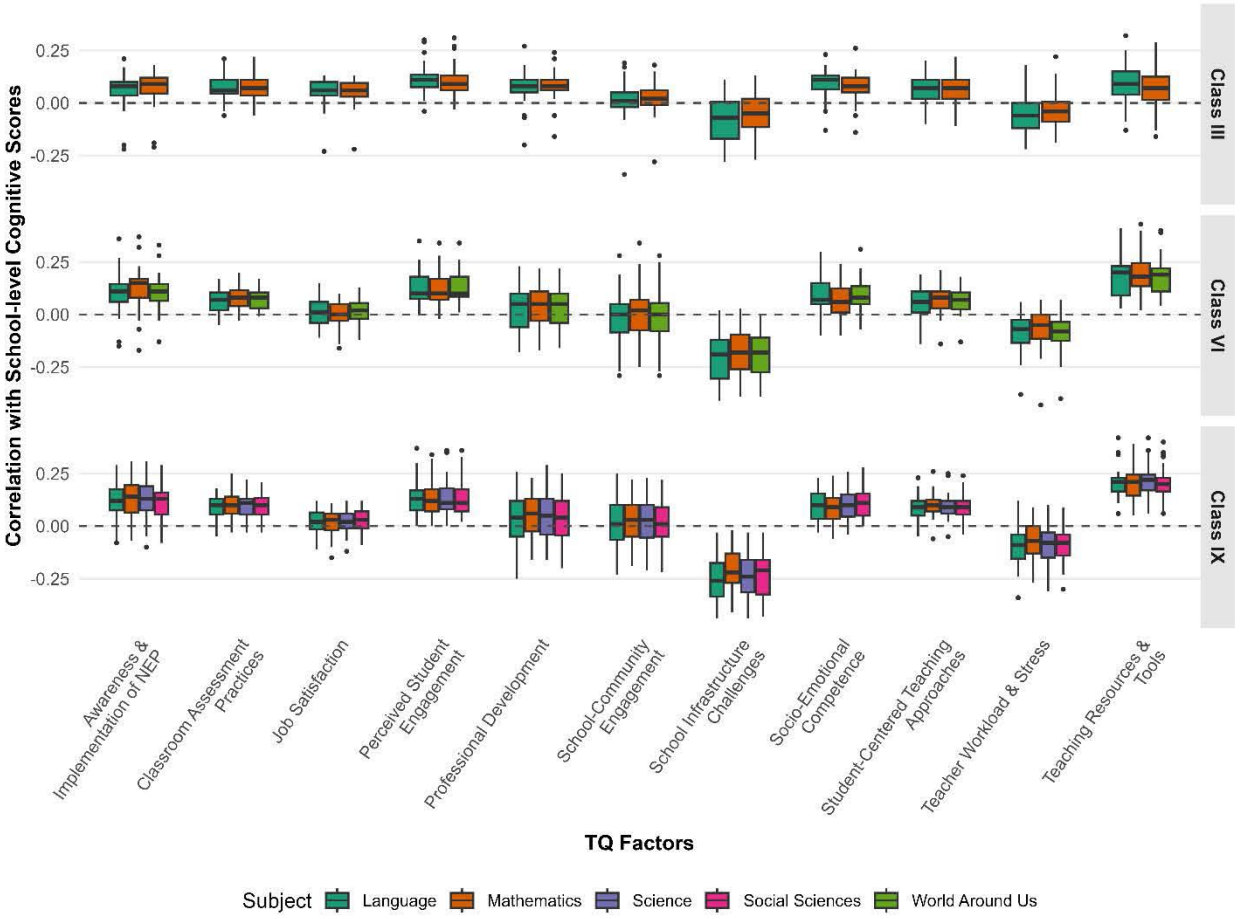

- While other factors such as Socio-Emotional Competence, Awareness of NEP, and Student-Centered Teaching Approaches had smaller correlations (typically between .06 and .13), their consistent direction suggests a meaningful relationship with student learning.
- Teacher Workload & Stress had weaker negative correlations across most subjects and levels, indicating student performance is somewhat lower when their teachers report more work-related strain.

Overall, while the absolute magnitude of correlations remains modest—as expected in system-level analyses their consistency across subjects and levels supports the broader interpretation that positive teaching conditions are associated with improved student outcomes.

State-Level Variation in Associations

To explore regional diversity in how teaching conditions relate to student performance, Figure 12.19 presents boxplots of state-level correlation coefficients across the TQ factors and multiple subjects. Each plot shows the distribution of correlation values across states, with outliers and variability highlighted.

Figure 12.19 *State-Level Variations Among Correlations between TQ Factors and Student Cognitive Scores*

The distributional patterns point to several notable observations:

- For most factor the correlations are tend to be positive with modest variability across states indicating the positive relationship between positive teacher conditions and perceptions and student achievement is somewhat universal.
- Infrastructure Challenges and Workload & Stress had more uniformly negative associations, reinforcing their broad-based detrimental effects regardless of local context.
- Certain factors such as Professional Development, School-Community Engagement and School Infrastructure Challenges showed wider inter-state variation in their correlations with student performance. This suggests that the relationships of these factors and student performance is more sensitive to local context than other factors.

Analysis Summary

The analysis of the TQ in PARAKH Rashtriya Sarvekshan 2024 highlights a coherent and interpretable factor structure encompassing eleven domains central to understanding teaching conditions in Indian schools. These include teachers' assessment practices, perceptions of student engagement, access to instructional resources, professional development, policy awareness, and work-related challenges. Most factors demonstrated acceptable reliability and were found to be meaningfully distinct yet interrelated, confirming the multidimensional nature of teaching environments.

Inter-factor correlations revealed strong associations between pedagogical practices such as student-centred instruction, classroom assessment, and perceived student engagement. These clusters suggest that teacher reports on effective instructional approaches tend to co-occur and may reinforce each other in practice. Conversely, factors like infrastructure challenges and workload stress showed weak or negative correlations with these cores teaching domains, suggesting they may operate more as systemic constraints than as integrated elements of classroom pedagogy.

When linked with student performance data at the school level, several TQ factors showed consistent positive associations with cognitive outcomes across subjects and class levels. Availability of teaching resources emerged as the factor most strongly correlated with student achievement. These findings were broadly consistent at the national level, while also revealing variation across states for Grade 3 and 6 that points to the importance of local context in the relationship between resources and student performance.

Taken together, the results potentially show the value of investments in teachers and schools as teacher resources and challenges in school infrastructure show some of the strongest relationships with student achievement.

12.6. School Questionnaire (SQ) Analysis

The School Questionnaire (SQ) in PARAKH Rashtriya Sarvekshan 2024 was designed to capture key dimensions of the institutional environment in which student learning takes place. Administered to over 74,000 school heads nationwide, the SQ covered topics ranging from leadership and planning to infrastructure, community interaction, student support systems, and the school's readiness for NEP 2020 implementation. These domains reflect both structural and relational conditions at the school level that shape how learning is organized and supported.

The SQ comprised 121 items across 36 questions, with a combination of binary, categorical, and Likert-type response formats. The analysis aimed to identify underlying factors that reflect the operational and pedagogical climate of schools, and to examine their relationship with student achievement outcomes. The findings in this chapter build on the psychometric analyses described in Section 2 and are organized into five parts: overview of data and sample quality, the final factor

structure and descriptive statistics, inter-factor relationships, associations with student cognitive performance, and a synthesis of key insights.

12.6.1 Overview of Data and Sample

The SQ was completed by 74,229 school principals, representing a broad cross-section of school types and geographies. Consistent with the approach taken for the Teacher Questionnaire, the SQ was analyzed as a pooled national dataset, as it was not designed to vary by class level.

Almost all items were selected for factor analysis, with the final factor scores calculated at the national level. These scores were subsequently linked with school-level student performance data to explore associations between school conditions and learning outcomes, as discussed.

12.6.2 Final Factor Structure, Descriptive Statistics, and Reliability

Following the same analytical approach as used for the TQ, 12 factors were finalized based on three key criteria: results from exploratory factor analysis (EFA), inter-item correlation patterns within each factor, and internal consistency measured using Cronbach's alpha. These psychometric criteria were complemented by expert thematic review to ensure theoretical coherence and conceptual clarity, in alignment with international large-scale assessment practices.

The finalized factors represent a comprehensive range of school environment dimensions, including both tangible infrastructure (e.g., facilities, resources) and process-oriented domains such as leadership, stakeholder engagement, policy implementation, and student support mechanisms. Each factor was reviewed and validated for its empirical and theoretical appropriateness, with details on item composition and alignment provided in the School Questionnaire Codebook.

The table 12.18 below summarizes the final factors, including the number of items, scoring range, national averages, standard deviations, and Cronbach's alpha values. Across the 12 factors, reliability estimates (Cronbach's alpha) were generally acceptable, with nine factors exceeding the .60 benchmark used in international assessments (OECD, 2024). Notably, Resources and Infrastructure and NEP 2020 Readiness showed strong internal consistency (.89 and .84 respectively), suggesting robust measurement of these critical domains. A few factors—such as School Policies and Practices and Assessment and Evaluation Strategies—had alpha values below .60 but were conceptually coherent and retained for their substantive importance.

National averages for most factors were moderately high, though variation across schools was evident. For instance, while Co-curricular Activities and School Policies showed ceiling effects in many schools, others such as Student Support Services and Wellbeing Trainings—exhibited greater variability, pointing to differential availability of holistic student support across contexts.

Table 12.18

Descriptive Statistics and Reliability for SQ Factors

Factor Name	Factor Description	No. of Items	Max Score	Mean	SD	Cronbach's α
Assessment and Evaluation Strategies	Extent to which the school promotes diverse assessment and evaluation strategies used by teachers to monitor student learning	8	8	7.44	1.08	.58
Co-curricular Activities	Availability of diverse co-curricular activities offered by the school to support students' holistic development beyond academics	6	6	5.24	1.22	.68
NEP 2020 Readiness	School leadership's readiness and actions toward understanding, implementing, and communicating key NEP 2020 reforms and documents	11	11	7.89	2.99	.84
Perceived Parental Support for Learning	School leader's perception of the level and impact of parental support on students' learning and attendance	3	6	3.56	1.71	.72
Proactive School Leadership	School leaders' participation in relevant trainings and proactive practices to ensure safety, instructional support, and community engagement.	9	9	5.69	2.19	.77
School Climate	Overall school environment as perceived by the head, encompassing teacher morale, collaboration, expectations, student motivation, discipline, and staff stability	7	14	11.51	2.2	.60
School Policies and Practices	The presence of essential school-level policies ensuring student safety, protection, and participatory governance structures.	5	5	4.45	0.92	.57

School Resources and Infrastructure	Availability and quality of school infrastructure, learning resources, and essential facilities supporting teaching and learning	23	40	28.72	8.53	.89
Stakeholder Interactions	Frequency of structured communication among teachers, students, parents, and community to support the implementation of school practices	4	12	10.52	1.8	.76
Student Support Services	Range of school-provided services and interventions supporting students' academic, emotional, health, and career-related wellbeing	7	7	3.59	1.78	.64
Teaching Plans & Documentation	School's requirements for teachers to maintain structured planning and documentation to guide instructional practices	4	4	3.53	0.95	.71
Wellbeing Trainings	Extent of school-organized training sessions for teachers and parents to promote psychosocial wellbeing, emotional skills, and behaviour management	6	6	4.47	1.88	.83

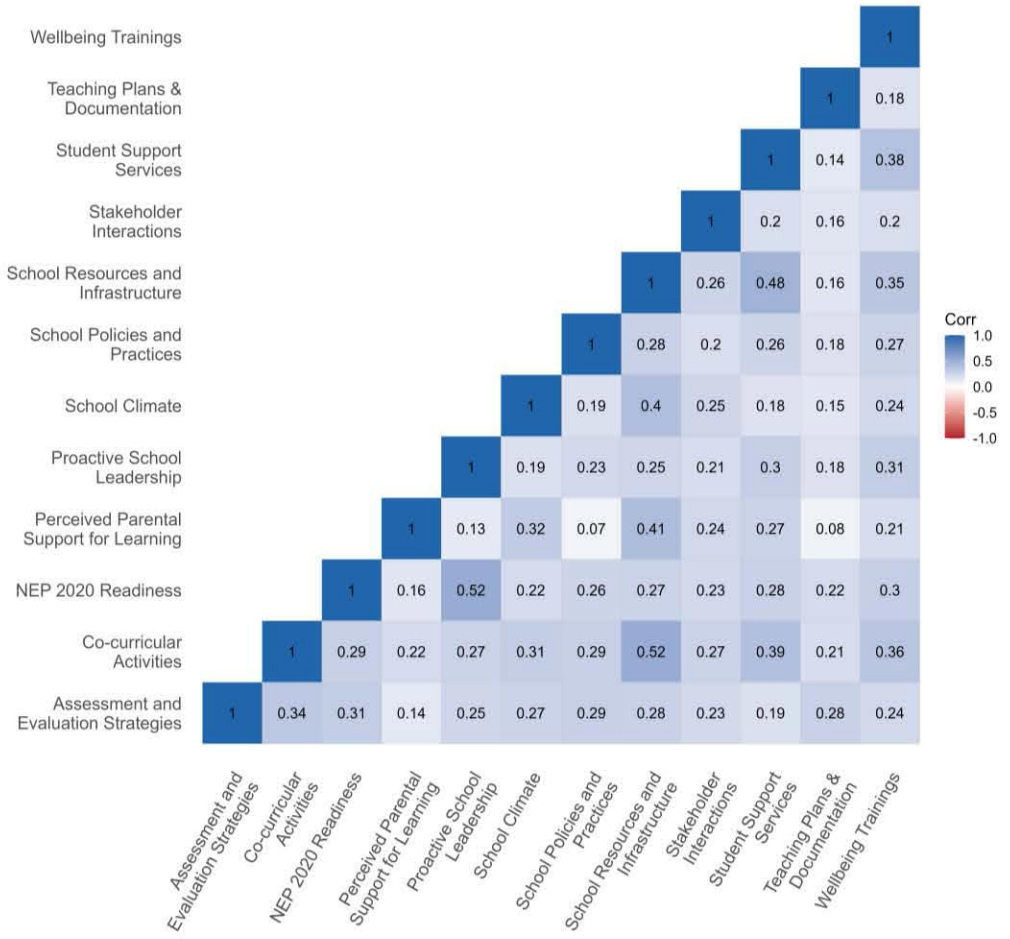

Together, these factors provide a rich lens into school conditions that matter for student learning. Full factor specifications and item-level details are documented.

12.6.3 Inter-Factor Correlations

To assess how various dimensions of school functioning relate to one another, inter-factor correlations were computed using national-level SQ factor scores. The resulting matrix provides insight into the internal structure of the instrument and the coherence of the school environment as perceived by school leaders.

Figure 12.20

Inter-Factor Correlation Heatmap for SQ Factors

Inter-factor correlations ranged from modest to moderate, reflecting the interconnections among school-level conditions. Key patterns include:

- Proactive School Leadership was strongly associated with NEP 2020 Readiness (r = .52) and moderately related to Wellbeing Trainings (r = .31) and Student Support Services (r = .30), highlighting leadership's central role in policy implementation and student support.
- Resources and Infrastructure showed strong correlations with Co-curricular Activities (r = .52) and Student Support Services (r = .48), and moderate associations with School Climate (r = .40) and Perceived Parental Support for Learning (r = .41), indicating that well-equipped schools support both learning opportunities and home-school engagement.
- School Climate was moderately related to Perceived Parental Support for Learning (r = .32) and Resources and Infrastructure (r = .40), emphasizing the connection between positive school environments, parental engagement, and adequate resources.
- Wellbeing Trainings correlated moderately with Student Support Services (r = .38) and Co-curricular Activities (r = .36), reflecting the contribution of staff development to student-focused practices.

Overall, the observed relationships align with theoretical expectations, highlighting that strong leadership, sufficient school resources, and a positive school climate provide the foundation for effective instruction, student support, and policy readiness.

12.6.4 Association with Student Cognitive Outcomes

To understand how school-level conditions relate to student learning, each SQ factor was correlated with aggregate student achievement scores at the school level. The analysis was conducted separately for Grade 3, 6 and 9, using subjects such as Language, Mathematics, Science, Social Sciences, and The World Around Us (TWAU). As in the TQ analysis, teacher and student data were linked through common school identifiers, allowing for robust school-level correlations.

National-Level Correlations

The national-level associations between each SQ factor and student scores across grades and subjects are described in the table below.

Table 12.19

Correlation between SQ Factors and Aggregate Student Cognitive Scores (National-Level)

	Grade 3		Grade 6			Grade 9			
Factor Name	Lang	Math	Lang	Math	WAU	Lang	Math	Sci	SS
Assessment and Evaluation Strategies	.10	.10	.13	.13	.12	.14	.12	.14	.13
Co-curricular Activities	.11	.11	.22	.21	.21	.25	.21	.24	.25
NEP 2020 Readiness	.13	.14	.18	.20	.18	.21	.22	.21	.21
Perceived Parental Support for Learning	.07	.06	.21	.20	.19	.28	.24	.26	.26
Proactive School Leadership	.14	.15	.20	.21	.19	.23	.22	.23	.23
School Climate	.14	.13	.20	.18	.19	.20	.17	.20	.21
School Policies and Practices	.08	.07	.16	.15	.14	.19	.15	.17	.16
School Resources and Infrastructure	.13	.11	.34	.30	.30	.43	.33	.38	.37
Stakeholder Interactions	.09	.09	.18	.19	.18	.21	.18	.20	.20
Student Support Services	.02	.00	.28	.26	.22	.36	.29	.33	.30

Teaching Plans & Documentation	.07	.07	.08	.09	.08	.10	.09	.01	.10
Wellbeing Trainings	.07	.06	.18	.16	.16	.18	.15	.17	.17

Note: Lang = Language, Math = Mathematics, WAU = World Around Us, Sci = Science, SS = Social Sciences

While the overall correlations were positive with the students' scores as expected from the theoretical perspective, the patterns indicated that certain school-level factors were more closely aligned with student learning than others:

- School Resources and Infrastructure emerged as the strongest and most consistent predictor of student performance, particularly in Class IX (e.g., r = .43 in Language, r = .38 in Science and .37 in Social Sciences). This could be reflecting the foundational importance of physical and instructional infrastructure in enabling learning.
- Student Support Services also showed notable positive correlations (up to r = .36), in higher grades, possibly pointing to a growing need for holistic student support as learners progress through school.
- Perceived Parental Support, School Climate, and Co-curricular Activities were associated with moderate gains in student outcomes (ranging from .06 to .28), consist with relational and non-academic inputs playing a complementary role in shaping student success.
- NEP 2020 Readiness, Proactive Leadership and Assessment and Evaluation Strategies showed somewhat smaller but consistent positive correlations across grades and subjects (r ≈ .10–.23).
- Correlations for Teaching Plans & Documentation, were relatively low but positive, especially in earlier grades. Their effect may be more indirect or context dependent.

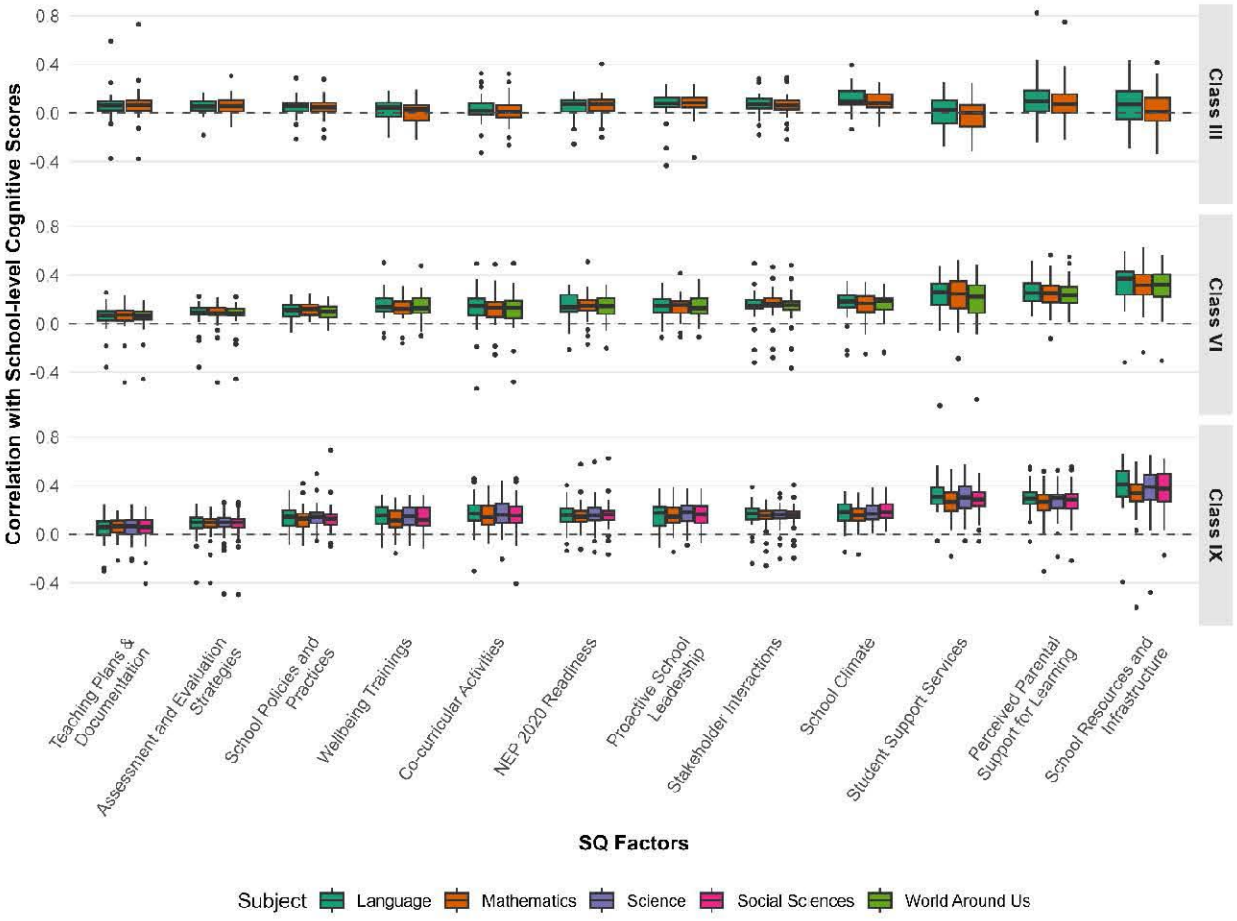

Overall, these results reflect a convergence between structural enablers (e.g., infrastructure, support services) and relational drivers (e.g., school climate, community engagement) and student performance.

13.6.4.2 State-Level Variation in Associations

To explore whether these associations held consistently across India's diverse states and territories, correlation coefficients were disaggregated by state and visualized using boxplots.

Figure 12.21

Distribution of State-Level Correlations between SQ Factors and Student Cognitive Outcomes

State-level disaggregation of correlations between school conditions and student outcomes revealed both areas of consistency and divergence. Factors such as Resources and Infrastructure showed strong and relatively stable associations across nearly all states and union territories, particularly in Grade 9, indicating a system-wide link between material inputs and academic performance. The strength of association for relational and programmatic factors such as Student Support Services, Parental Support, and School Climate were lower than for Resources with similar variability among states and union territories.

Other factors, including Assessment and Evaluation, Teaching Plans, and Wellbeing Trainings, displayed weaker and less dispersed correlations with student scores. Notably, a few states stood out as outliers, showing unusually high correlations in areas like Teacher Plans, hinting at possible promising local practices that may merit deeper investigation.

Analysis Summary

The analysis of the SQ in PARAKH Rashtriya Sarvekshan 2024 offers a multidimensional view of school conditions as reported by over 74,000 school heads across India. The 12 finalized factors reflect key domains of school functioning, spanning physical infrastructure, leadership practices, community engagement, assessment approaches, and student support systems. Most of the factors as

implemented in the SQ showed demonstrated acceptable reliability and conceptual clarity, confirming the coherence and measurement validity of the SQ instrument.

Inter-factor correlations revealed that several domains such as school climate, leadership, and stakeholder interactions tend to cluster together, indicating that positive institutional cultures are rarely isolated. Schools reporting higher levels of proactive leadership, for example, also tended to have stronger climates, more robust support systems, and greater stakeholder involvement. Conversely, domains such as teaching plans or policy documentation appeared more procedural and showed weaker integration with other factors, suggesting opportunities to embed them more meaningfully within broader school improvement efforts.

When linked with student performance, certain factors stood out for their consistent and positive associations. School Resources and Infrastructure emerged as a key factor highly associated with student achievement across grades and subjects, while Student Support Services, Parental Support, and School Climate were nearly as strongly associated with learning outcomes especially in higher grades where holistic supports become increasingly critical. However, the strength of these associations varied across states, pointing to possible moderation of relationships due to differential implementation and contextual realities that shape how school conditions translate into learning gains.

These findings reinforce the need for exploring a balance array of school conditions: foundational infrastructure and operational capacity while also studying the affect of building school climates that nurture student wellbeing and community participation. Attention to local variability is equally essential, as the data suggest that notable contextual variation for the relationships between some conditions and student performance.

Thus, the SQ results offer both a diagnostic and a roadmap illuminating which school conditions to give further investigation and factor to explore for where policy action might be most effectively directed.

13.7. Conclusion

This chapter focused on the contextual questionnaires used in PARAKH Rashtriya Sarvekshan 2024 and documented the development of their factor structures, the reliability of the scales, and the weighted correlations between these factors and students' cognitive scores. Using a consistent analytical framework across instruments, the chapter outlined how latent factors were identified, validated, and summarized to provide a coherent set of contextual measures for students, teachers, and schools.

For the Pupil Questionnaire, eight school-related factors and the SES Index were identified across Grade 3, 6 and 9. Subject-Specific Beliefs and Feelings, School Infrastructure and Facilities, and

Extracurricular Activities and Interest showed the strongest positive associations with achievement across subjects and grades. Preferred Learning Methods and Teaching Methods also demonstrated consistent positive correlations, while Bullying Experience showed negative associations for all subjects. Social-Emotional Wellbeing displayed smaller positive relationships with achievement. The SES Index showed moderate associations with achievement in Grades 6 and 9, while associations for Grade 3 were notably weaker and should be interpreted cautiously, as responses from younger students may be less reliable for describing household characteristics. Correlations between the factor scores and achievement varied in magnitude across states but were directionally consistent across most factors. Variation across states was greatest for Accommodation & Support for CWSN students which are estimated only with the relatively smaller sample of CWSN students.

For the Teacher Questionnaire, eleven factors were identified describing instructional practices, resource availability, professional development, workload, perceptions of student engagement, and policy awareness. National-level associations with student achievement were generally small but consistently positive for factors related to teaching resources, classroom assessment practices, and student-centred approaches. Negative associations were observed for School Infrastructure Challenges and Teacher Workload and Stress. While most patterns were stable across states, some factors like Professional Development and School–Community Engagement exhibited greater variability, that suggests differences in systems across states.

From the analysis of School Questionnaire, twelve factors were identified capturing crucial aspects of leadership practices, school climate, parental support, co-curricular opportunities, student support systems, and infrastructure. School Resources and Infrastructure showed the strongest and most consistent positive associations with achievement across grades and subjects, followed by Student Support Services, Co-curricular Activities, and Perceived Parental Support. Variation across states was limited for infrastructure-related factors but higher for programmatic areas such as Wellbeing Trainings and Teaching Plans, reflecting differences in school-level practices.

Overall, the results provide policymakers and education administrators with a structured view of conditions reported by students, teachers, and school heads and how these conditions relate to cognitive outcomes in PARAKH Rashtriya Sarvekshan 2024. These findings can support planning by highlighting areas where school resources, learning environments, and support systems align with stronger student performance, while also identifying domains where associations vary across states and warrant further examination.

Chapter 13: Key Outcomes

The PARAKH Rashtriya Sarveksan 2024 survey marks a transformative shift in the landscape of large-scale educational assessments in India. Conceived as a successor to the National Achievement Survey (NAS), PARAKH Rashtriya Sarveksan 2024 is anchored in the vision of the National Education Policy (NEP) 2020 and aligned with global practices in educational measurement. PARAKH Rashtriya Sarveksan 2024 adopts a competency-based approach grounded in the National Curriculum Framework for School Education (NCF-SE 2023). By integrating cognitive performance with contextual data, PARAKH Rashtriya Sarveksan 2024 not only measures what students know and can do but also explores the environments in which they learn. As a result, PARAKH Rashtriya Sarveksan 2024 offers a nuanced understanding of student learning across three critical stages - Foundational, Preparatory, and Middle, corresponding to Grades 3, 6, and 9.

The key outcomes reported in this chapter represent a synthesis of the results reported in detail in the previous chapters and chapters' annexes. They are reported at the national level and across states, overall and by gender, area, school management and social groups, and are organized according to the following types of outcomes:

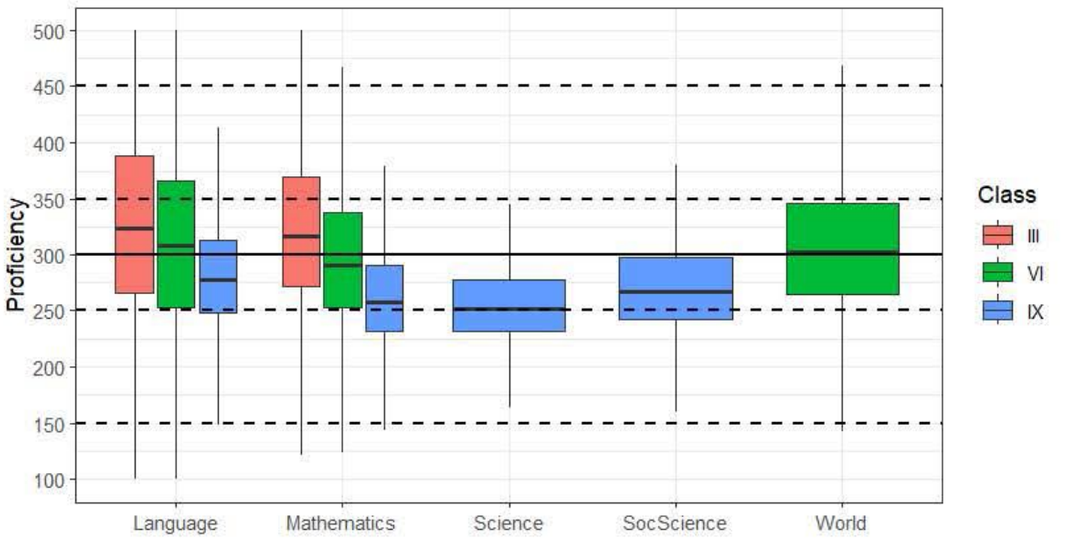

- Performance
- Percentages of students performing at below basic, basic, proficient, and advanced levels
- Factor score
- Association between performance and student, teacher and school questionnaire factor scores

13.1 National Level Outcomes

13.1.1 Performance

PARAKH Rashtriya Sarveksan 2024 national scale score summary statistics and scale score distributions are provided in Table 13.1 and Figure 13.1. These outcomes show that

- Most Grade 3 students performed well above 300 (the performance level needed to respond to approximately 50% of the test items) in Language and Mathematics
- Most Grade 6 students performed slightly above 300 in Language, slight below 300 in Mathematics, and slightly above 300 in The World Around Us (TWAU)
- Most Grade 9 students performed well below 300 in Language, Mathematics, Science, and Social Science.

Each of the "box and whiskers" plots indicates the score distribution 25th , 50th and 75th percentiles (bottom, middle and top of the box) and distribution spread below the 25% and above the 75%.

Figure 13.1 National Score Distributions for all Grades and subjects.

Subject	Grade 3			Grade 6			Grade 9		
	N	Mean	SD	N	Mean	SD	N	Mean	SD
Language	599026	330.4	83.3	663195	313.4	80.9	852801	285.4	54.4

Performance of State/UTs : Location (Mathematics Grade 9)

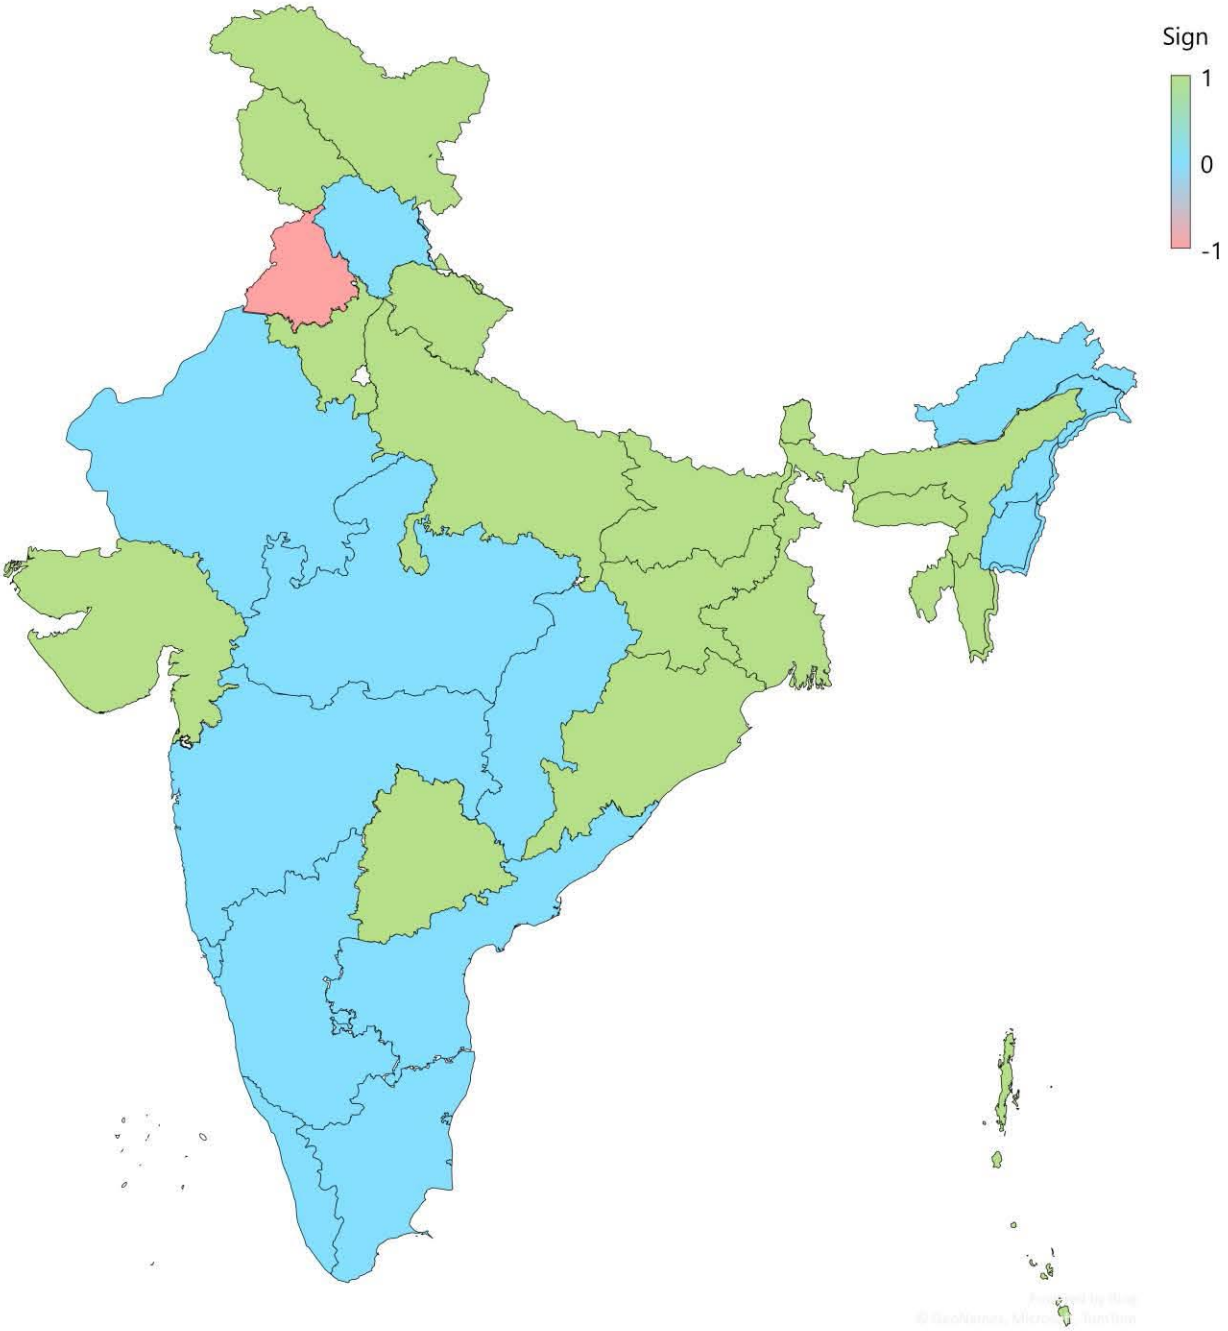

Average achievement score of school in rural area is not significantly different from that of average score of schools in urban area in the same State/UT.

Average achievement score of school in rural area is significantly above from that of average score of schools in urban area in the same State/UT.

Average achievement score of schools in rural area is significantly below from that of average score of school in rural area in the same State/UT.

Performance of State/UTs : Location (Science Grade 9)

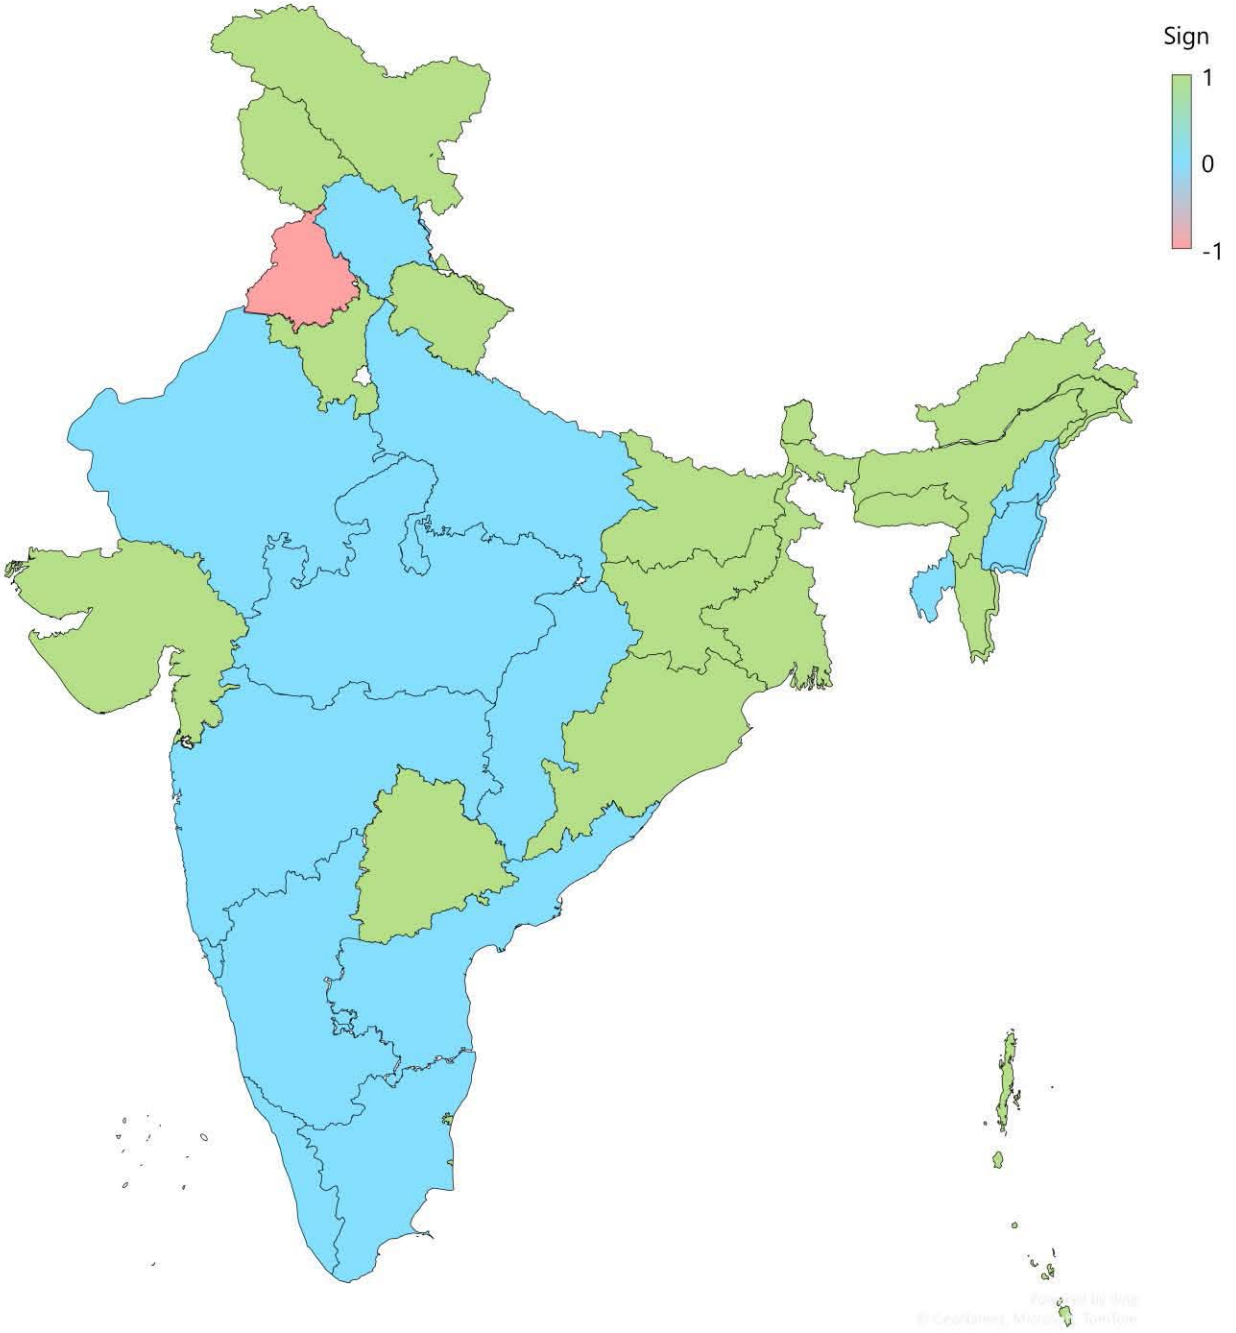

Average achievement score of school in rural area is not significantly different from that of average score of schools in urban area in the same State/UT.

Average achievement score of school in rural area is significantly above from that of average score of schools in urban area in the same State/UT.

Average achievement score of schools in rural area is significantly below from that of average score of school in rural area in the same State/UT.

Performance of State/UTs : Location (Social Science Grade 9)

Average achievement score of school in rural area is not significantly different from that of average score of schools in urban area in the same State/UT.

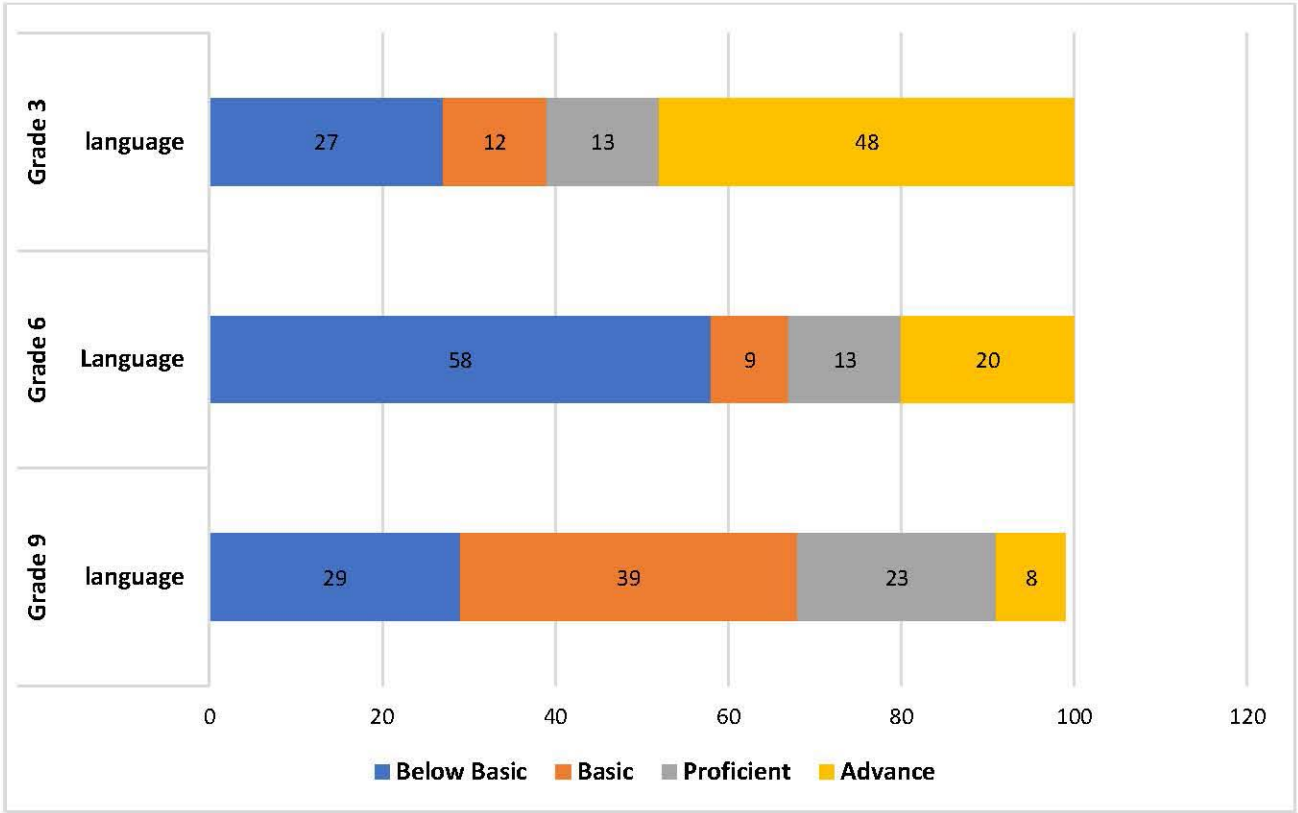

Average achievement score of school in rural area is significantly above from that of average score of schools in urban area in the same State/UT.

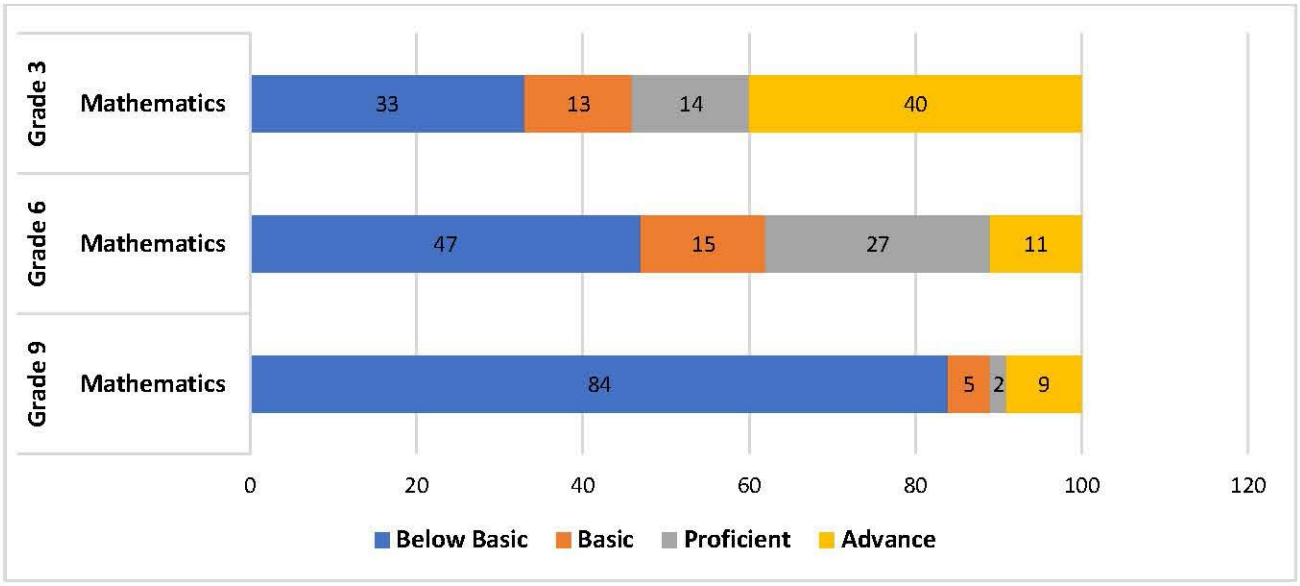

Average achievement score of schools in rural area is significantly below from that of average score of school in rural area in the same State/UT.

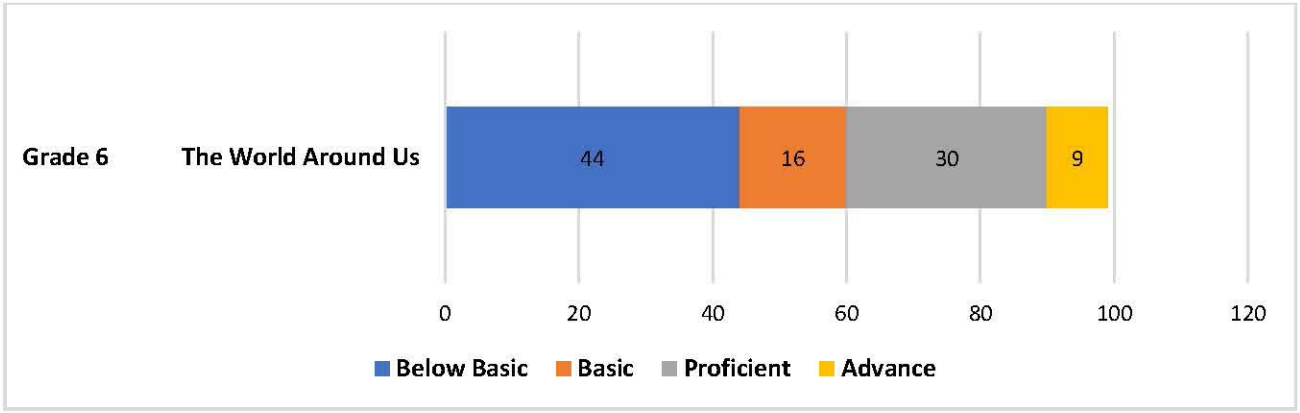

13.1.2 Percentages of Students by Proficiency Level

The percentages of students classified as Below Basic, Basic, Proficient, and Advanced are displayed in Figure 13.2, across all Grades and subjects. These percentages are based on the proficiency level cuts provided in Chapter 12. Figure 13.2 shows that for

- Language
  - Relatively equal percentages of students are performing below Basic or Basic as Proficient or Advanced, in Grade 3
  - However, the percentage of students performing below Basic or Basic becomes much larger in 6 and then in Grade 9
- Mathematics
  - The same pattern as in Language is observed, only more extreme
- Science, Grade 9
  - Of all subjects, Science has the largest percentages of students performing below Basic
- Social Science, Grade 9
  - Social Science also has large percentage of students performing Below Basic
- The World Around Us, Grade 6
  - Most students are performing Below Basic or Basic.

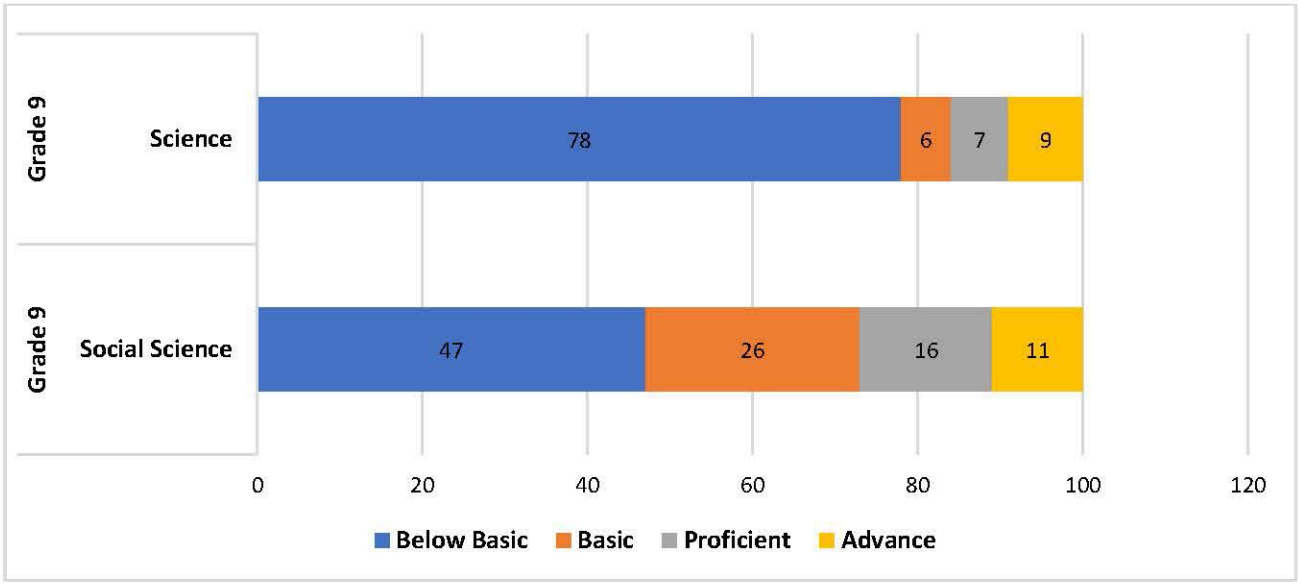

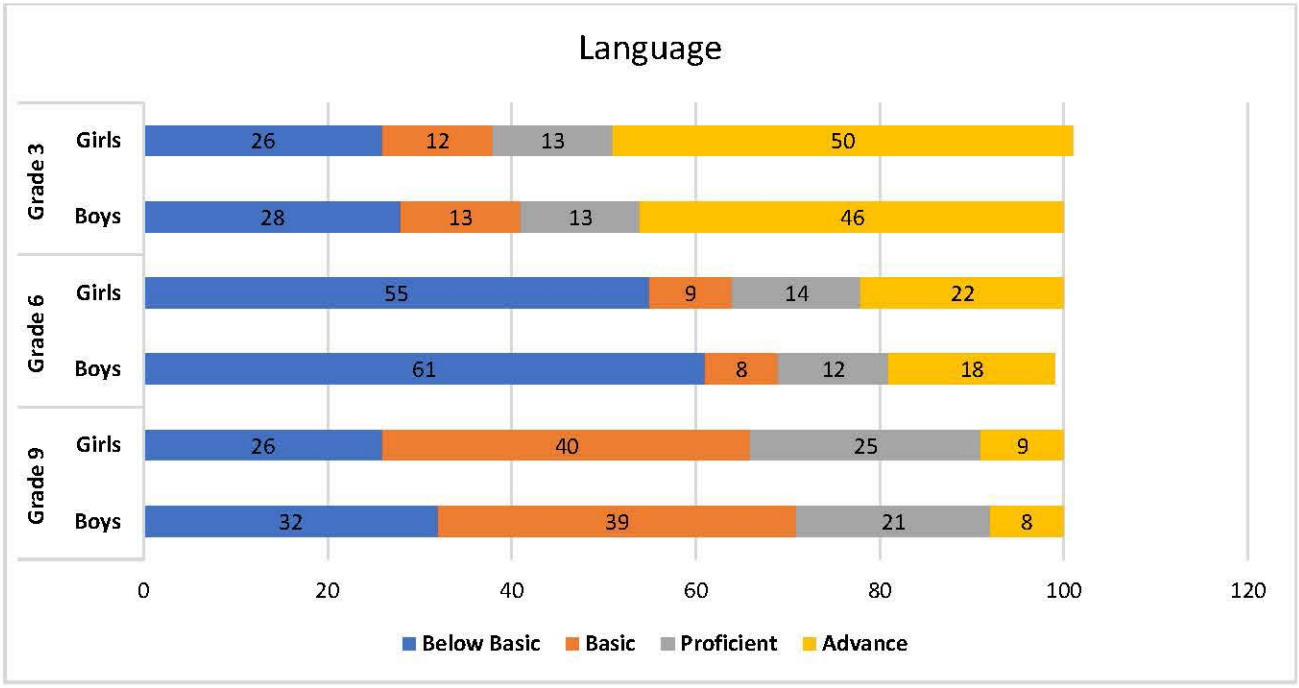

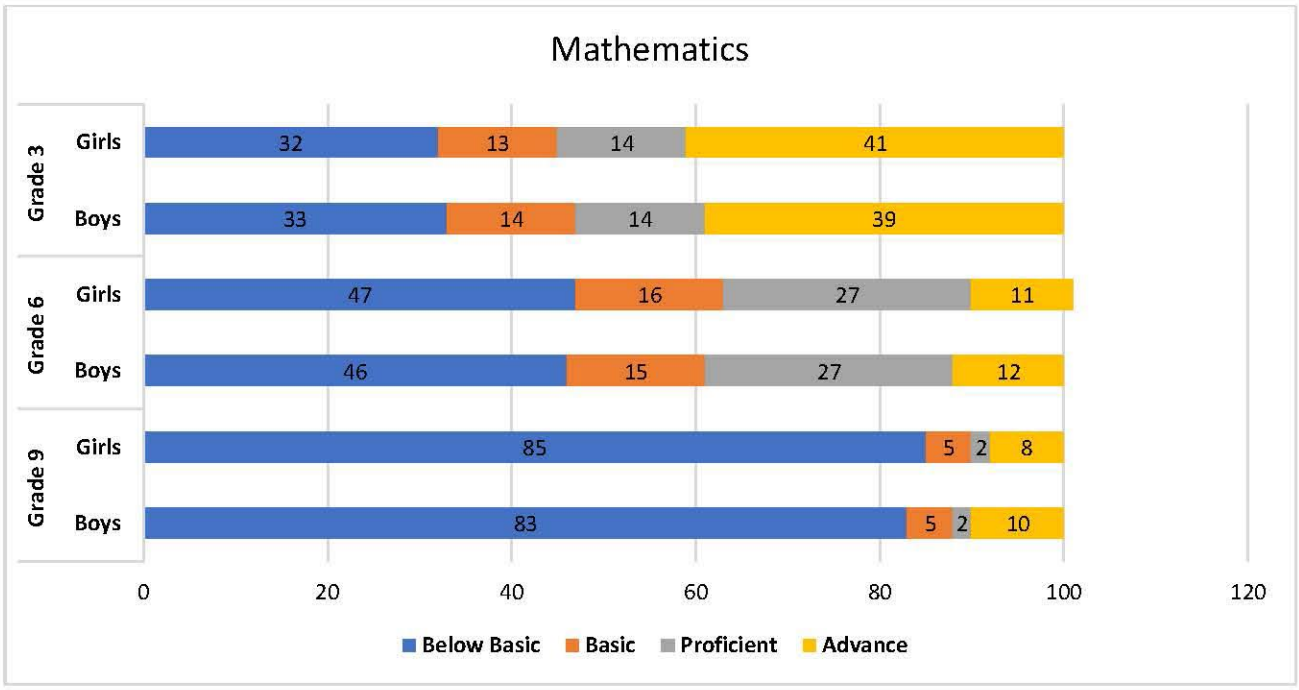

Figure 13.2 National Student Percentiles by Proficiency Level for all Grades and subjects.

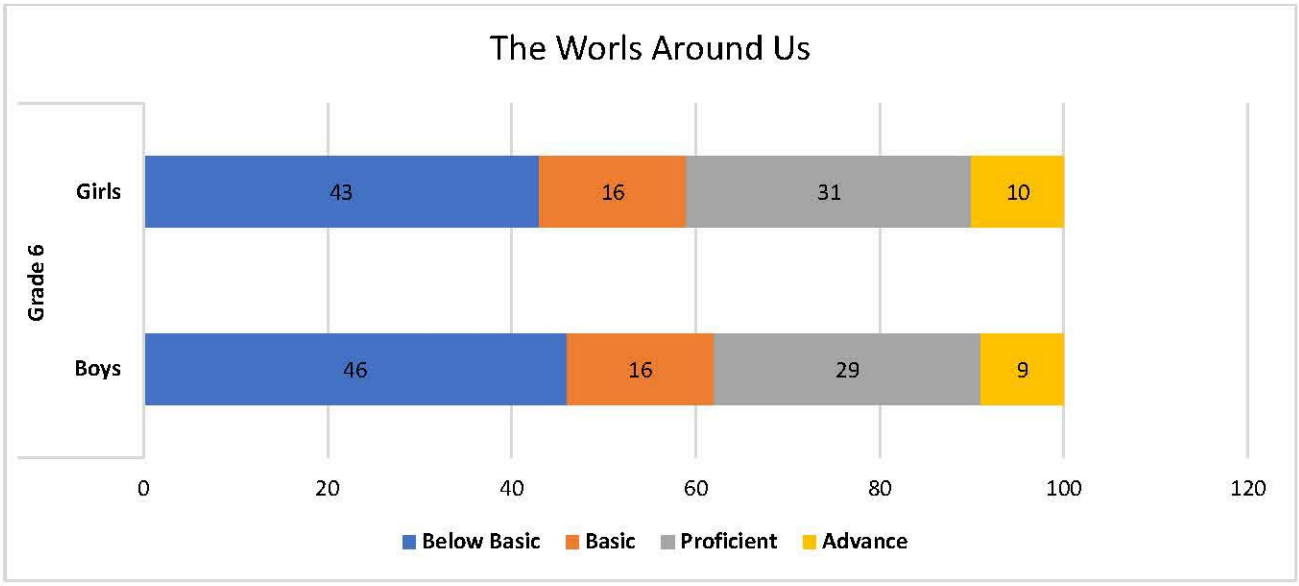

Differences in percentages of students by proficiency level by key variables are displayed in Figures 13.3 to 13.6.

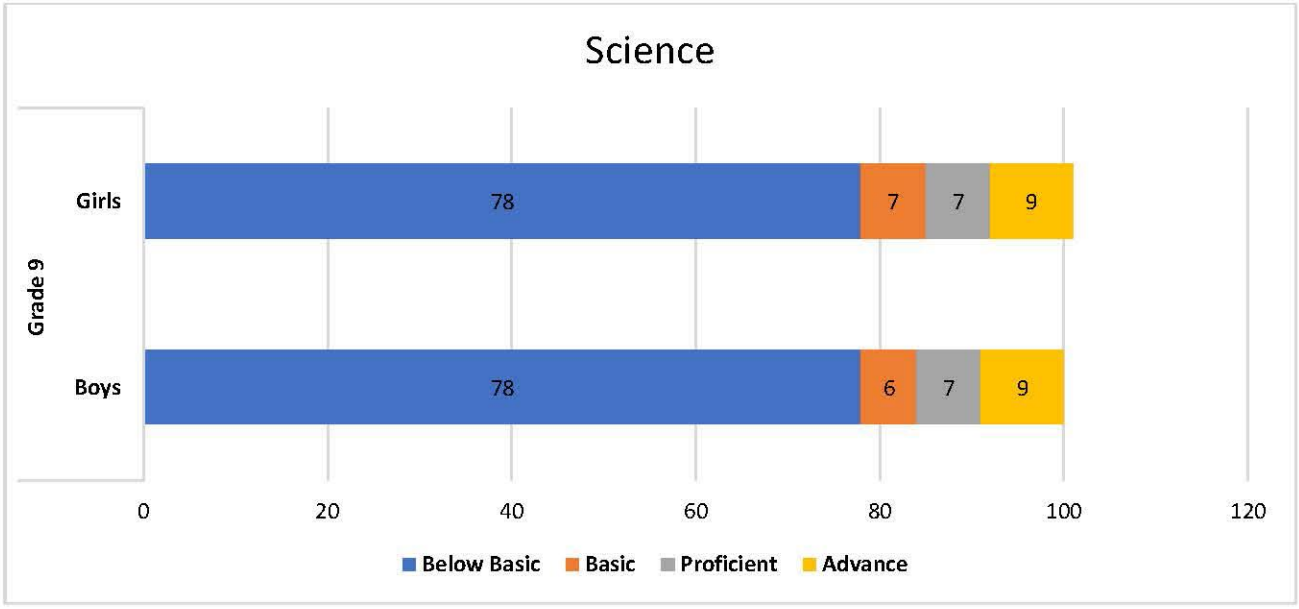

For Gender, results show that:

- Gender differences (Girls vs. Boys) are generally small across Grades and subjects.

For School Management:

- In Grades 6 and 9, a greater percentage of students are at the Proficient or Advanced level and smaller percentages are at the Below Basic or Basic level than for the other management types.
- For Grades 6 and 9, a much larger percentage of students in Government Aided or State Government schools are Below Basic and Basic than in Private or Central Government Schools.
- For Grade 3, somewhat more students are Below Basic in Central Government schools than in the other management types, which have relatively similar distributions of students across performance levels.

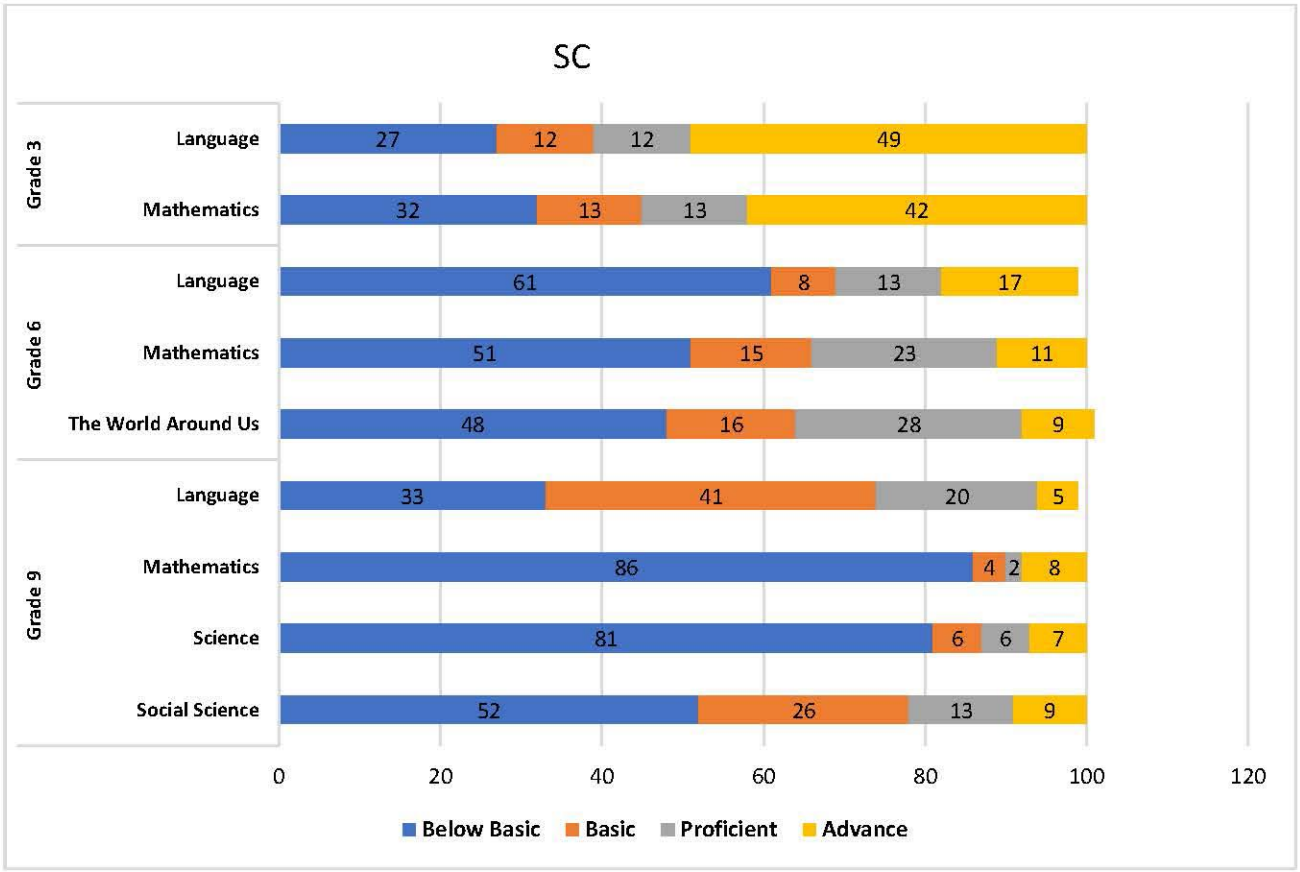

Figure 13.5 National Student Percentiles by Proficiency Level for all Grades and subjects, by School Management.

For Social Group:

- In Grades 6 and 9, General category students are more likely to be Proficient or Advanced than students in the other groups for all subjects.
- Greater percentages of Scheduled Tribe students are Below Basic than other groups.

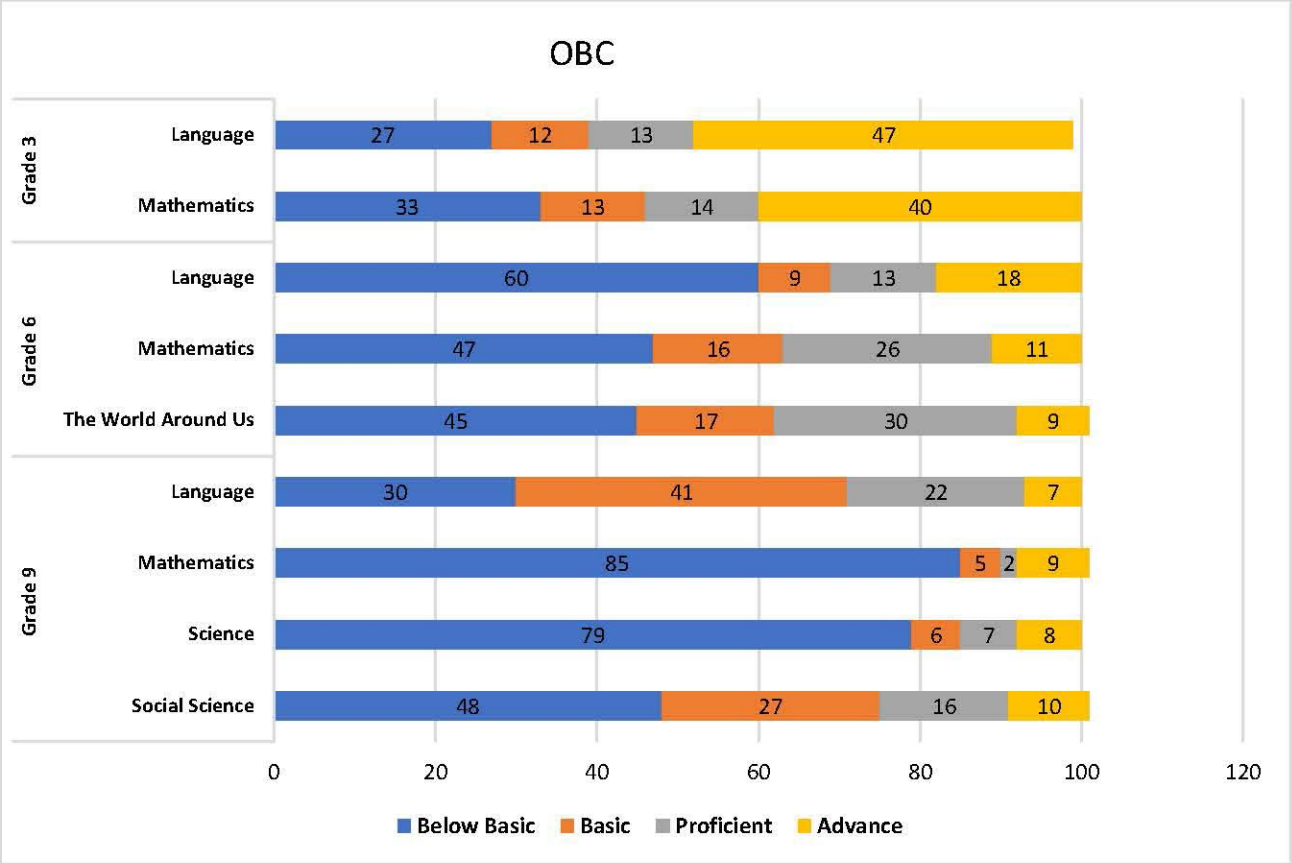

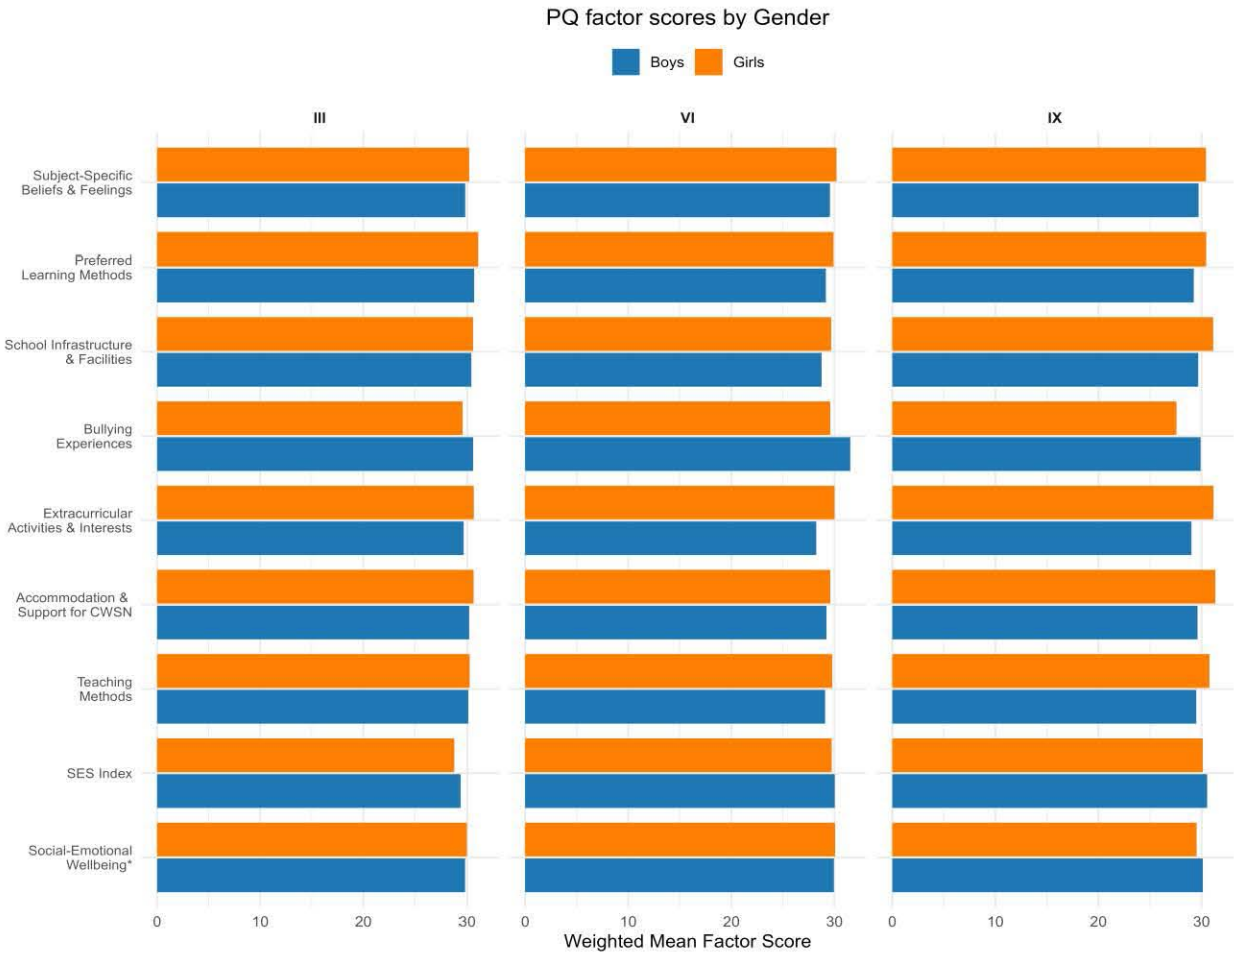

Figure 13.6 National Student Percentiles by Proficiency Level for all Grades and subjects, by Social Group.

13.1.3 Factor Scores

Factor scores were first calculated as raw sums of item responses within each factor, as described in Chapter 13. However, to support clear interpretation and comparison of factors within the PQ, TQ and SQ across background characteristic, sum-scores were standardised and rescaled to a common reporting metric with a mean of 30 and a standard deviation of 10. For one factor in the Pupil Questionnaire, Socio-Emotional Wellbeing, the item set differed across Grades: Grades 3 and 6 included fewer items than Grade 9 as mentioned in Chapter 13. To ensure a comparable metric, this factor was first standardised within each Grade and then rescaled to the same reporting scale as other factors. The results presented in this section show weighted mean factor scores across key background characteristics (gender, social group, school location, and school management), reported consistently on this common scale.

Pupil Questionnaire

Figures 13.7 to 13.10 present the relative differences in rescaled factor scores (range 10–60) across key student background characteristics, including gender, social group, school location, and school management type. These comparisons help illustrate broad patterns in students' reported experiences and perceptions, recognising that they reflect weighted means and should not be interpreted as statistically significant differences.

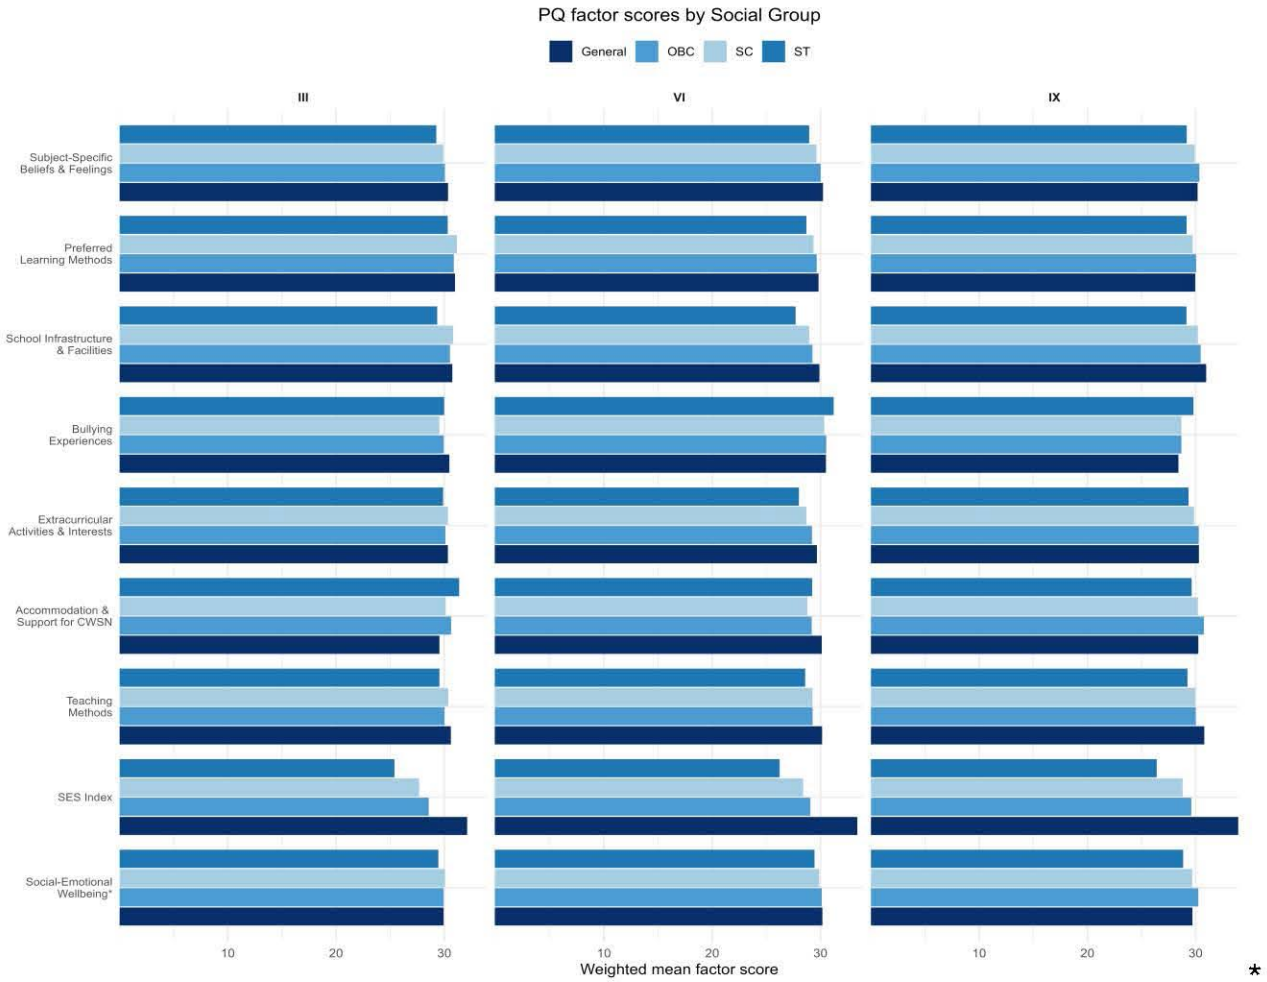

*Note: Socio-Emotional Wellbeing was standardized within each Grade before rescaling to account for differences in the number of items across Grades.

Figure 13.7 Pupil Questionnaire Factor Scores by Gender and Grade

Key observations include:

- Girls reported slightly higher weighted mean scores than boys on several factors like Subject-Specific Beliefs & Feelings, Preferred Learning Methods, School Infrastructure & Facilities, Extracurricular Activities & Interests, and Teaching Methods. The differences are modest and should not be interpreted as statistically significant.
- Boys reported marginally higher scores than girls on Bullying Experiences in Grades 3 and 6, whereas the difference narrowed in Grade 9. Scores for SES Index and Accommodation & Support for CWSN were generally similar between boys and girls in all Grades.
- Across-Grade comparisons show a gradual increase in scores from Grade 3 to Grade 9 on several factors, such as Preferred Learning Methods and Extracurricular Activities & Interests, for both boys and girls.

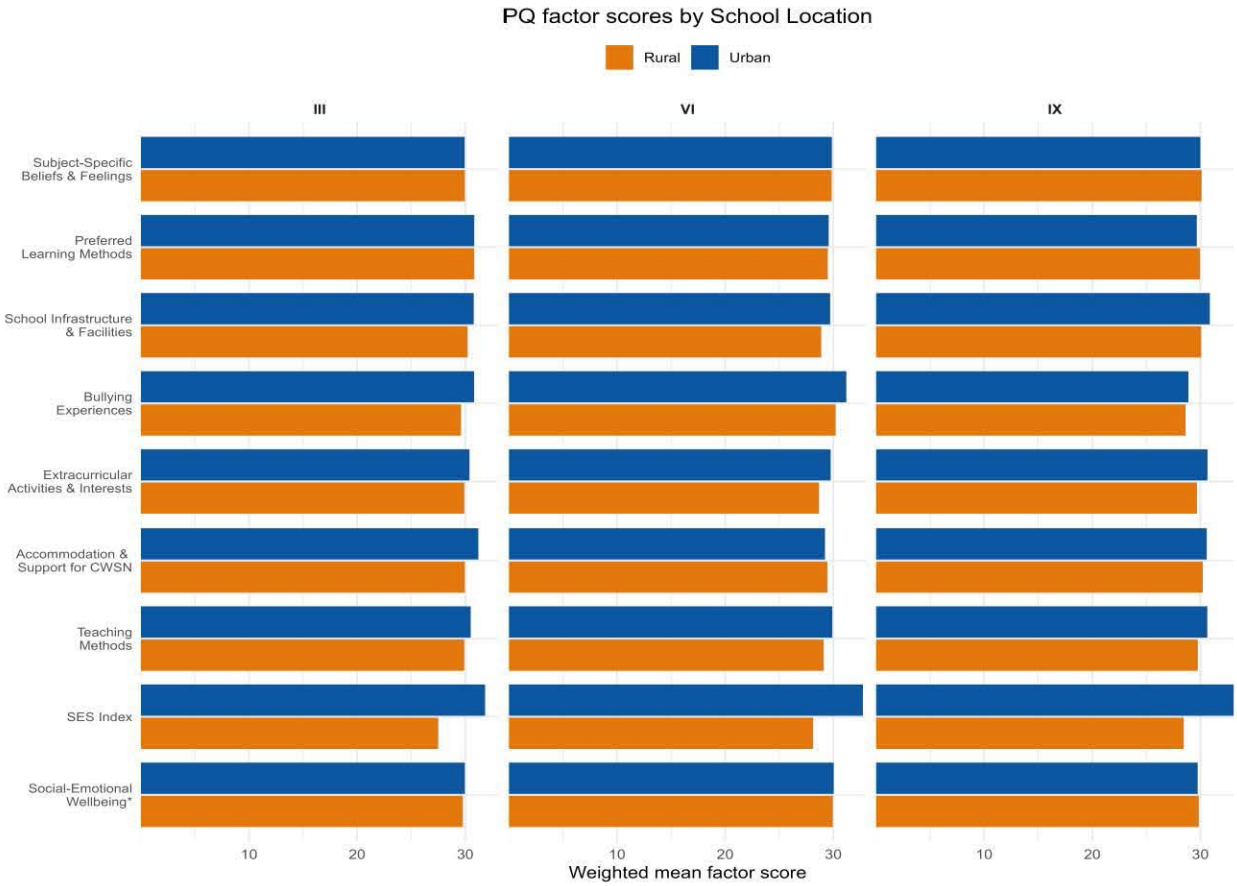

Note: Socio-Emotional Wellbeing was standardized within each Grade before rescaling to account for differences in the number of items across Grades.

Figure 13.8 Pupil Questionnaire Factor Scores by Social Group and Grade

Key observations include:

- Across most factors, differences across social groups were modest, with General and OBC students showing slightly higher scores on factors such as Subject-Specific Beliefs & Feelings and Preferred Learning Methods, while SC and ST groups reported marginally lower averages.
- Students from different social groups in Grade 3 reported almost similar scores on bullying experiences, but for Grades 6 and 9, ST students reported higher bullying experiences.
- For SES Index, students from the General category reported higher values followed by OBC and SC/ST.

*Note: Socio-Emotional Wellbeing was standardized within each class before rescaling to account for differences in the number of items across grades.

Figure 13.9 Pupil Questionnaire Factor Scores by School Location and Grade

Key observations include:

- Urban school students generally reported higher scores than rural students on factors such as Subject-Specific Beliefs & Feelings, Preferred Learning Methods, and School Infrastructure & Facilities, with modest differences across Grades.
- Differences between urban and rural schools on Teaching Methods, Extracurricular Activities & Interests, and Accommodation & Support for CWSN were relatively small.
- However, as expected, the urban students report higher factor scores than rural students on the SES factor.

*Note: Socio-Emotional Wellbeing was standardized within each class before rescaling to account for differences in the number of items across grades.

Figure 13.10 Pupil Questionnaire Factor Scores by School Management Type and Grade

Key observations include:

- Students in private schools tended to report higher scores on several factors, particularly Subject-Specific Beliefs & Feelings, Preferred Learning Methods, and School Infrastructure & Facilities, while government and aided schools showed similar levels on most factors.
- Differences across management types on Extracurricular Activities & Interests, Teaching Methods, and Accommodation & Support for CWSN were small, especially in the lower Grades.
- In Grade 9, variation across management types appeared more noticeable on a few factors, though overall patterns remained consistent with earlier Grades.

Teacher Questionnaire

The next set of figures (figures 13.11 and 13.12) presents teachers' rescaled factor scores (range 10–60) across key school characteristics. These patterns offer a broad view of how teachers' reported practices, experiences, and school conditions vary by location and management type.

Figure 13.11 Teacher Questionnaire Factor Scores by School Location and Grade

Key observations include:

- Teachers in urban schools generally reported higher scores on Teaching Resources & Tools, Student-Centered Teaching Approaches, and Classroom Assessment Practices, and lower scores on school infrastructure challenges.
- Teacher Workload & Stress showed small differences between urban and rural settings, while factors such as teacher's Socio-Emotional Competence and Professional Development were broadly similar.
- Differences between urban and rural schools remained fairly stable across Grades 3, 6, and 9, with no major shifts in relative ordering of factors.

Figure 13.12 Teacher Questionnaire Factor Scores by School Management Type and Grade

Key observations include:

- Teachers in central government and private schools tended to report higher scores on several factors, particularly Teaching Resources & Tools, Student-Centered Teaching Approaches, and Classroom Assessment Practices.
- Teachers from central government schools reported lower job satisfaction and higher workload and stress as compared to teachers from other school management types.
- Noticeably, the state government school teachers reported higher infrastructural challenges than the other teachers, and the pattern was consistent across Grades.

School Questionnaire

Figure 13.13 and figure 13.14 present school-level factor scores (rescaled to the common 10–60 metric) across school location and management categories. These results highlight broad patterns in reported school conditions, leadership practices, and support systems as reported by the school leaders.

Figure 13.13 School Questionnaire Factor Scores by School Location and Grade

Key observations include:

- Principals in urban schools tended to report higher levels of School Resources & Infrastructure, School Climate, and Proactive School Leadership, with this pattern visible across Grades.
- Reports from rural and urban principals were very similar for several factors, including Teaching Plans & Documentation, Assessment and Evaluation Strategies, and Wellbeing Trainings, with only small gaps across Grades.
- Urban principals also indicated slightly higher levels of Student Support Services and Parental Support for Learning, though the overall pattern remained relatively consistent across Grade 3, 6, and 9.

Figure 13.14 School Questionnaire Factor Scores by School Management Type and Grade

Key observations include:

- School leaders from central government schools reported comparatively higher scores on several key areas, including Wellbeing Trainings, Student Support Services, School Resources and Infrastructure, Proactive School Leadership, Assessment and Evaluation Strategies, Co-curricular Activities, and NEP 2020 Readiness.
- Leaders in private schools reported higher levels of Perceived Parental Support for Learning relative to other management types.

13.1.4 Association of Questionnaire Factor and Proficiency Scores

Figures 13.15 to 13.17 show patterns of association (measured as weighted correlations) between the background questionnaire factors and the proficiencies scores (for all Grades and subjects). Correlation values represented by green to red squares ranged from–0.4 to +0.4. Darker green cells indicate stronger positive correlations (higher factor score is associated with higher achievement), while darker red cells indicate stronger negative correlations (higher factor score is associated with lower achievement). Blank and lightly colored cells reflect weak or negligible correlations.

Pupil Questionnaire

Key observations include:

- Several PQ factors such as Subject-Specific Beliefs and Feelings, Preferred Learning Methods, and School Infrastructure & Facilities, showed small to moderate positive associations with achievement across Grades, with the pattern similar across Grades

- The SES Index displayed one of the stronger positive associations, particularly in Grades 6 and 9, where higher SES were associated with higher scores across subjects.
- Bullying Experience showed a consistent negative association with achievement across all Grades and subjects.

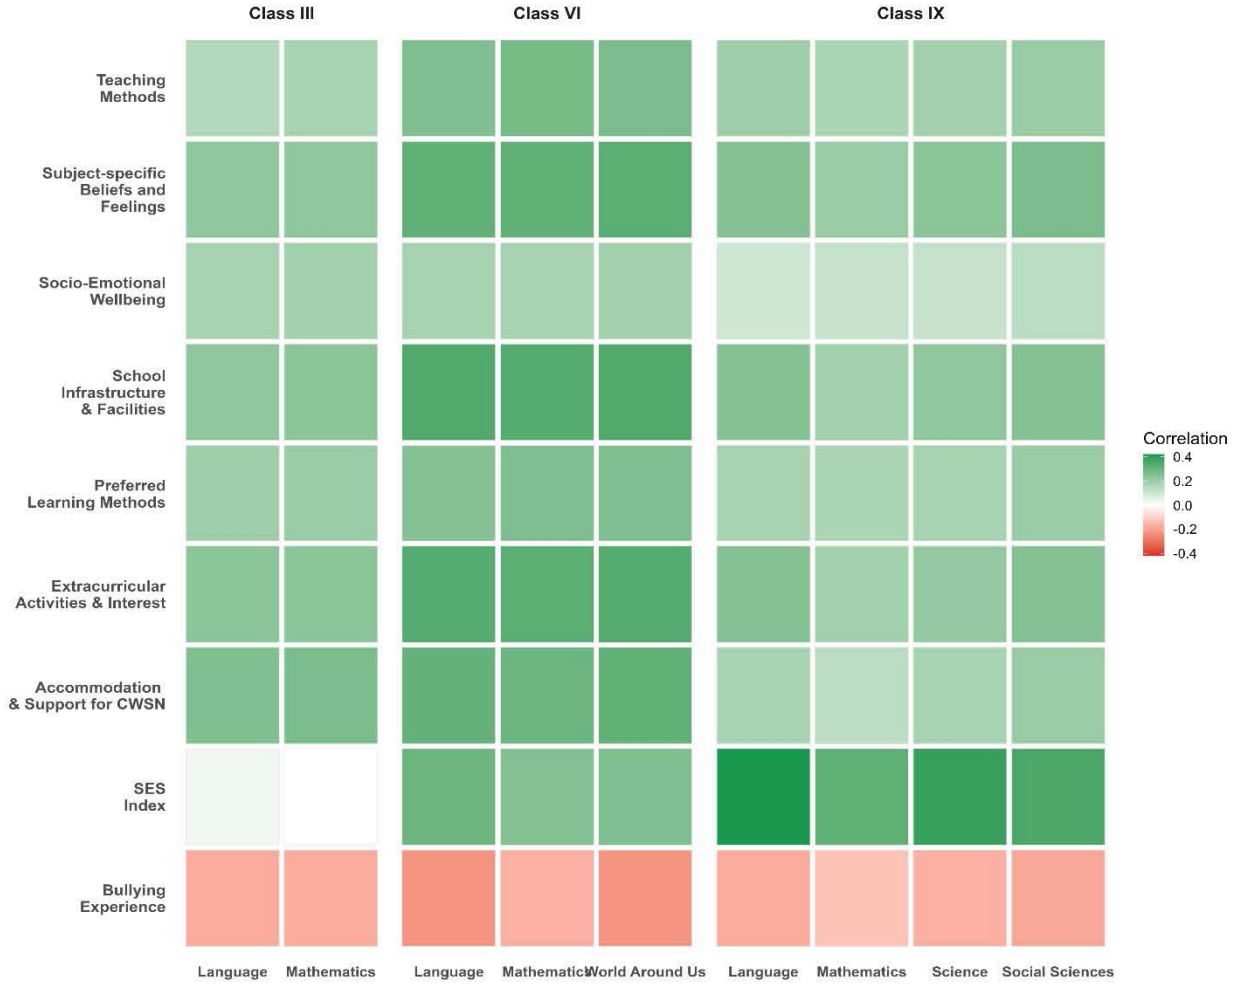

Figure 13.15 Association Between Pupil Questionnaire Factors and Proficiency Scores (Weighted Correlations)

Teacher Questionnaire

Key observations include:

- Teaching Resources & Tools showed one of the strongest positive associations, especially in Grades 6 and 9, across Language, Mathematics, and Science.
- Factors such as Perceived Student Engagement and Classroom Assessment Practices also displayed consistent positive associations with achievement across most subjects.
- In contrast, Teacher Workload & Stress and School Infrastructure Challenges showed negative associations, particularly in Grades 6 and 9, suggesting that higher reported challenges tend to coincide with lower proficiency scores.
- Associations for Professional Development, Job Satisfaction, and School-Community Engagement were comparatively modest across Grades.

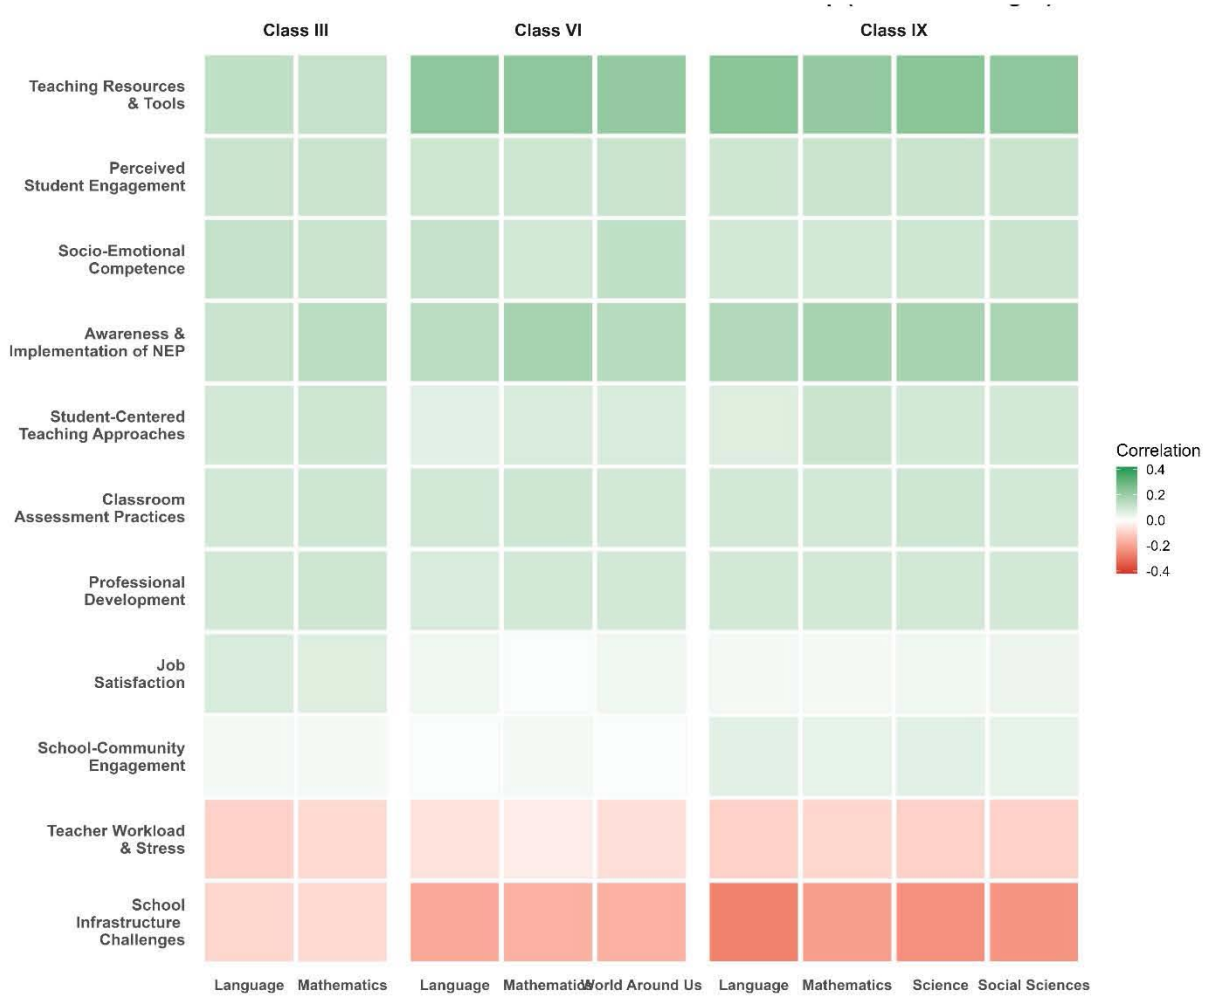

Figure 13.16 Association Between Teacher Questionnaire Factors and Proficiency Scores (Weighted Correlations)

School Questionnaire

Key observations include:

- In Grades 6 and 9, school-level factors such as School Resources and Infrastructure, Student Support Services, School Climate, and Proactive School Leadership showed moderate positive associations with proficiency across subjects.
- Perceived Parental Support for Learning and Stakeholder Interactions also exhibited positive correlations, though generally smaller than those observed for resource- and climate-related factors.
- For most factors, associations were minimal in Grade 3, with clearer patterns emerging only in the upper Grades.

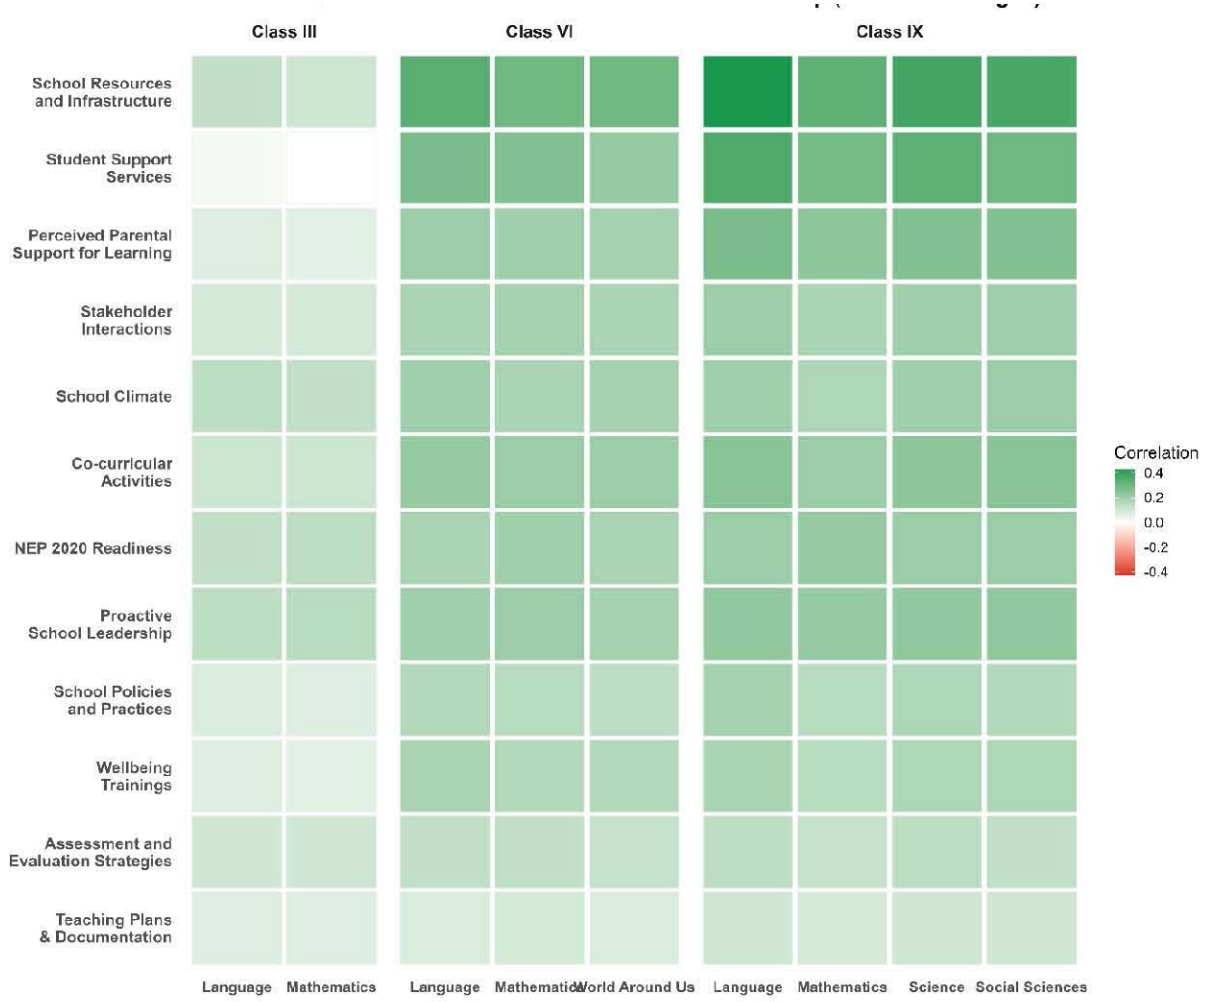

Figure 13.17 Association Between School Questionnaire Factors and Proficiency Scores (Weighted Correlations)

13.2 State Level Outcomes

The key state level outcomes presented here include

- States' relative performance across Grade and subjects
- Broad patterns in the association between major school and system level factors and student performance, illustrated through selected state-level analyses.

13.2.1 States' Relative Performance

Each state's average performance (Mean) was compared to the national average performance across Grades and subjects based on the effect size (ES) and statistical significance (Sign) results reported in Chapter 11.

Difference patterns are shown in Figure 13.19, where darker green boxes indicate states performing higher than the nation with a statistically significant effect size above 0.4, lighter green boxes a statistically significant effect size above 0.2, blank boxes a small significant or non-significant effect size below 0.2, lighter orange boxes indicate states performing lower than the nation with a statistically significant effect size above 0.2, and darker orange boxes a statistically significant effect size above 0.4. Note that states were ordered according to their average effect size across Grades and subjects, with higher performing states at the top of the figure.

Figure 13.19 show:

- States that stand out for performing significantly higher than the nation across Grades in all subjects
- States that stand out for performing significantly lower than the nation across Grades in all subjects
- States that perform relatively closely to the nation across all Grades and subjects
- States that show less consistent patterns as they perform relatively lower or higher across Grade and or subjects (e.g., Delhi performance patterns as they such as performing lower in Grade 3

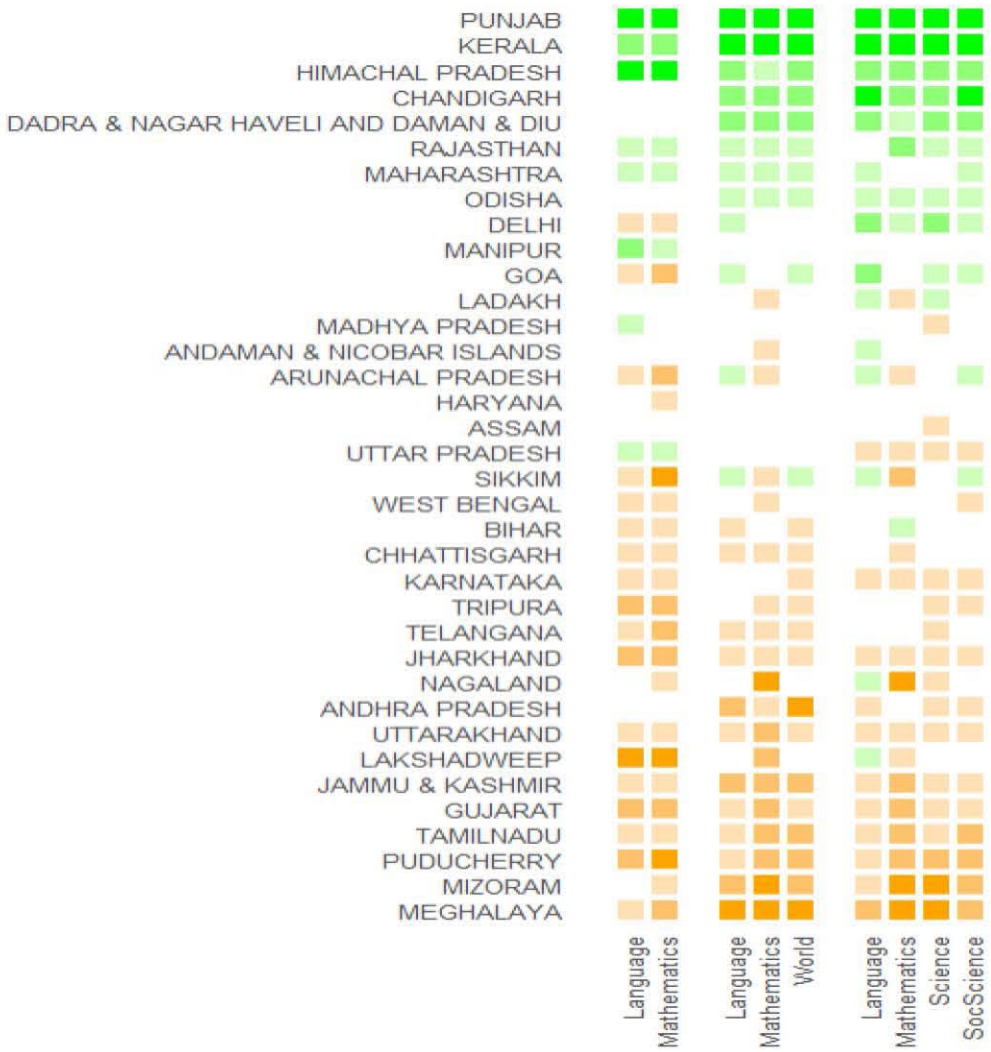

Figure 13.19 Relative Performance of States across Grades and Subjects.

13.2.2 States Level Association of Performance with Major Questionnaire Factors

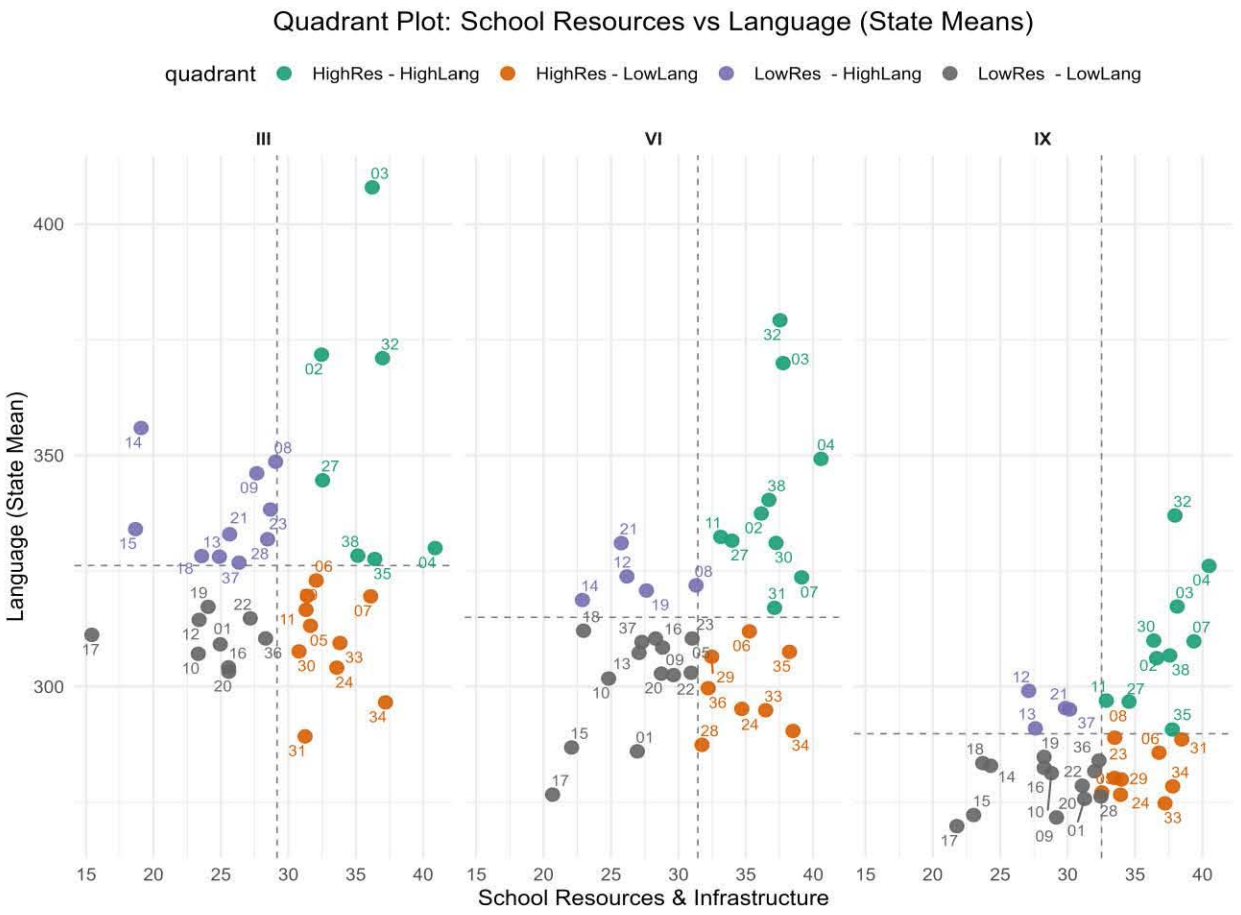

To complement the national-level heatmap patterns, this section presents state-level comparisons of school factors and student performance. The quadrant plots illustrate how states are positioned relative to the national mean on both the School Resources and Infrastructure factor (as reported by school leaders) and student proficiency scores. These plots help identify broad patterns as well as states that diverge from the overall national relationship.

Figure 13.20 divides states into four quadrants based on whether they are above or below the weighted national mean on (a) School Resources and Infrastructure, and (b) Language proficiency. The quadrants can be interpreted as follows:

- High Resources – High Language: States reporting above-average school resources and achieving above-average Language scores.
- High Resources – Low Language: States reporting stronger school resources but demonstrating below-average Language performance.
- Low Resources – High Language: States with lower-than-average resource levels but above-average Language scores.
- Low Resources – Low Language: States below the national mean on both measures.

The quadrant of particular interest is the High Resources – Low Language group (shown in orange). Earlier national heatmaps indicated that School Resources and Infrastructure showed positive associations with proficiency, particularly in Grades 6 and 9. However, this plot highlights that a subset of states do not follow this general pattern. These states report higher-than-average resource levels based on school leader responses, yet their Language performance remains below the national mean. Across Grades 3, 6, and 9, several states consistently appear in this quadrant, suggesting that higher resource availability alone may not be translating into stronger learning outcomes.

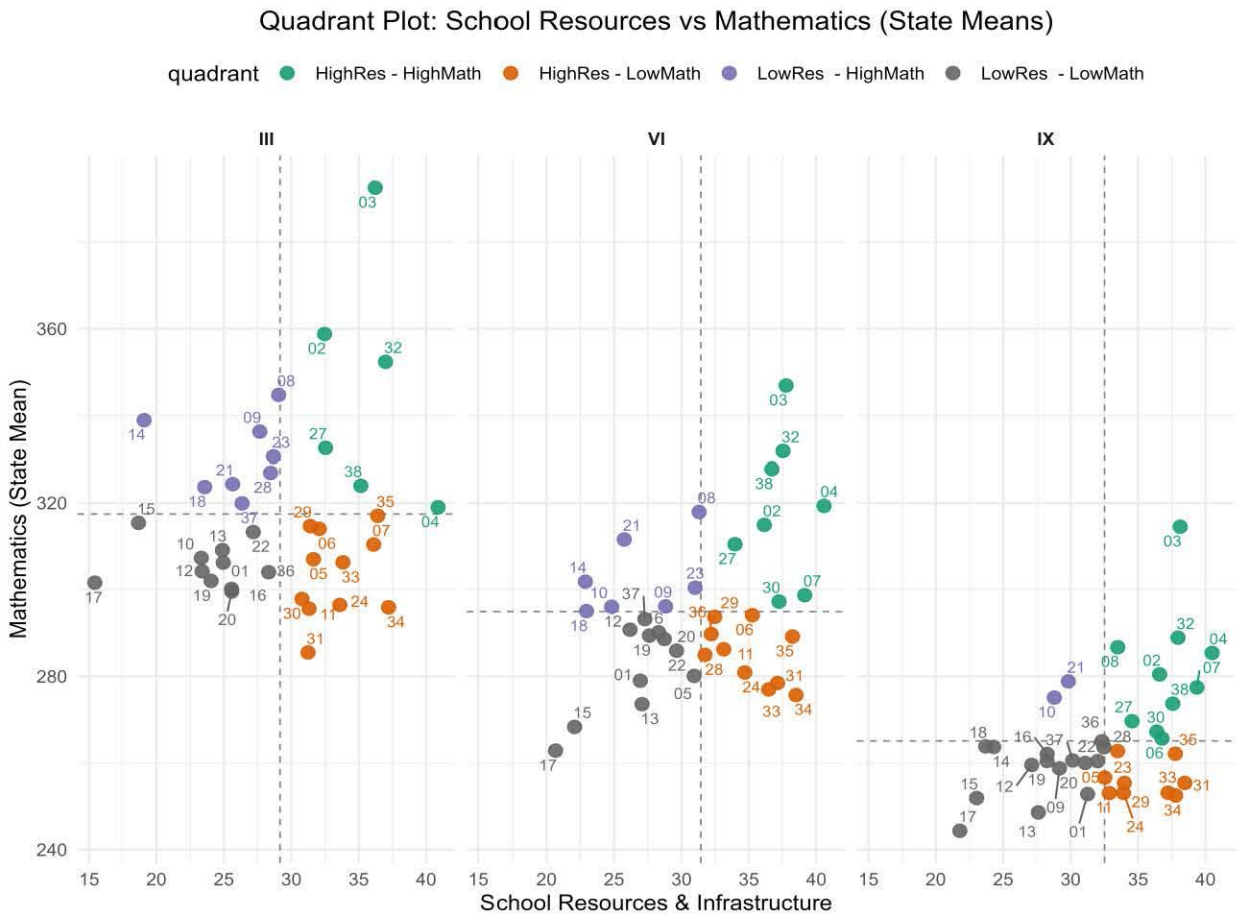

There are also a smaller number of states with low resources but higher-than-average achievement. States in this quadrant might have insights for other states on producing high achievement for students in low-resource schools. These findings underscore the importance of examining additional school processes and contextual factors that may influence learning.

01	JAMMU & KASHMIR	10	BIHAR	19	WEST BENGAL	30	GOA

Figure 13.20 Quadrant Plot of School Resources and Infrastructure vs. Language Proficiency (State Means)

A parallel analysis for Mathematics (Figure 13.21) reveals similar overall patterns, with several states again located in the High Resources – Low Mathematics quadrant. This reinforces the observation that strong resource indicators, while valuable, may not be sufficient to ensure higher cognitive performance at the state level and that low above average achievement can be obtained in in schools with below average resources.

01	JAMMU & KASHMIR	10	BIHAR	19	WEST BENGAL	30	GOA
02	HIMACHAL PRADESH	11	SIKKIM	20	JHARKHAND	31	LAKSHADWEEP

Figure 13.21 Quadrant Plot of School Resources and Infrastructure vs. Mathematics Proficiency (State Means)

Together, the Language and Mathematics quadrant plots suggest that states appearing in the High Resources – Low Achievement quadrant or the Low Resources – High Achievement quadrant may benefit from a closer examination of the broader conditions that relate to student performance. While these patterns do not indicate causes, they highlight the value of reviewing additional aspects of the schooling environment as states work toward improving learning outcomes.

13.3 Further Research and Policy Analyses

Within the scope of this technical report, a high-level summary of major PARAKH Rashtriya Sarvekshan 2024 outcomes have been pointed out. However, as indicated earlier, the PARAKH Rashtriya Sarvekshan 2024 databases of student's cognitive scaled scores, students' contextual variables and factor scores provide an extremely rich source of information for researchers and policymakers who are experts in their field to use PARAKH Rashtriya Sarvekshan 2024 to develop new knowledge, gain further understanding of national, states and district education challenges, to evaluate the effectiveness of existing policies and to investigate and propose new policies to enhance education systems.

Given below is a simple example of high-level outcome that could be investigated further is presented.

The types of outcomes presented in this chapter **at the national level and across states** provide an evaluation framework that could be replicated and possibly further developed to provide state-level key outcomes.

13.3.1 Secondary analyses: A Simple Example

National results show that central government schools tend to report higher average proficiency scores than other management types.

Table 13.2 presents this pattern for Grade 9 in Language and Mathematics, and similar differences were also observed for Grade 6 (not shown here).

Table 13.2 Grade 9 Mean Language and Mathematics Scores Across School Management Type

School Management Type	Mean Language	Mean Mathematics
Central Government	321.63	301.84
Private	297.93	274.03
State Government	271.37	256.52
Government Aided	273.11	255.25

To understand how school conditions and teaching practices differ across management types, selected factors from the Teacher Questionnaire were reviewed for descriptive comparison. Figure 13.18 presents the Grade 9 factor scores reported by teachers across management categories. The results indicate that teachers in central government schools generally report higher levels on several key factors, including:

- Awareness & Implementation of NEP
- Classroom Assessment Practices
- Perceived Student Engagement
- Teacher Socio-Emotional Competence
- Student-Centered Teaching Approaches
- Teaching Resources & Tools

These descriptive differences offer insight into the kinds of school-level practices and supports that may coexist with higher performance. However, these findings should not be interpreted as causal. The purpose of this illustration is to highlight how teacher-reported practices differ across school management types and to

show that schools with higher achievement tend to report stronger levels on several instructional and organisational factors.

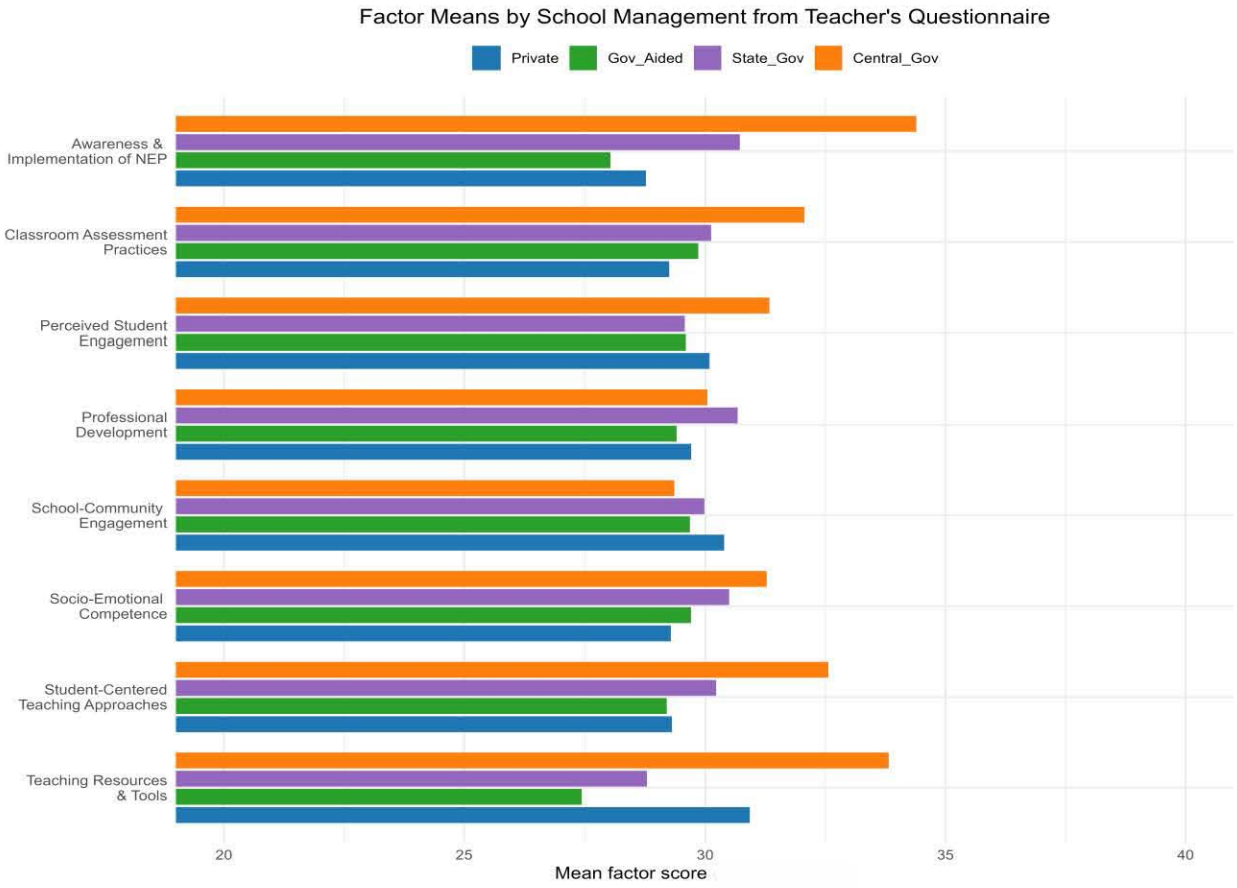

Figure 13.18 focuses on Grade 9, while the patterns for Grade 6 show a similar overall distribution.

13.4 Conclusion

This chapter presented a consolidated view of the key outcomes from PARAKH Rashtriya Sarvekshan 2024 at the national and state levels including performance, proficiency distributions, background factor scores, and their associations with achievement across Grade 3, 6 and 9. The chapter also highlighted how these outcomes vary across key demographic and school characteristics such as gender, social group, school location, and school management type.

The national patterns highlight that student in the early grades generally meet or exceed the performance level required to answer about half of the items in Language and Mathematics, while performance in the upper grades declines across subjects, particularly in Mathematics, Science, and Social Sciences. These results, together with the proficiency distributions, point to increasing proportions of students performing at the Below Basic and Basic levels in the later stages of schooling.

The factor scores from the Pupil, Teacher, and School Questionnaires offered additional insight into students' learning environments and school conditions. Factor scores for boys and girls were largely consistent across grades. Students in urban schools tended to report higher scores on factors such as Bullying Experiences, Extracurricular Activities, and School Infrastructure & Facilities, while students in central government and private schools reported higher scores on the SES Index and School Infrastructure & Facilities. Teachers in urban and central government schools reported higher levels of Teaching Resources & Tools, Student-

Centered Teaching Approaches, Perceived Student Engagement, and Classroom Assessment Practices, whereas teachers in central and state government schools also reported comparatively higher Teacher Workload & Stress. School leaders in urban and central government schools reported higher levels of School Resources & Infrastructure, School Climate, and Proactive School Leadership. Together, these results provide a broad view of how reported learning environments and school conditions vary across groups and complement the national performance patterns.

The association of these factor scores with performance indicated that several factors—such as the SES Index, Subject-Specific Beliefs & Feelings, Teaching Resources & Tools, School Resources & Infrastructure, and Student Support Services—tended to show positive relationships with achievement, whereas factors like Bullying Experience, Teacher Workload & Stress, and School Infrastructure Challenges consistently showed negative relationships with achievement. These patterns are correlational and should not be interpreted as causal, nevertheless they point to the factors are the most likely to matter most and may be the most useful to further research. These patterns may also point to shortcomings in the current version of the survey that could be the focus of improvements for the next cycle.

At the state level, the results showed considerable variation across subjects and grades. The quadrant analyses further highlighted that some states with above average reported school resources do not show correspondingly higher levels of achievement. Such patterns suggest the value of examining additional aspects of the schooling environment when interpreting state outcomes and planning further investigations.

Chapter 14: Dissemination and Post PARAKH Rashtriya Sarvekshan Intervention

The PARAKH Rashtriya Sarvekshan 2024 was successfully conducted on 4th December 2024 by the National Assessment Centre – PARAKH (Performance Assessment, Review, and Analysis of Knowledge for Holistic Development), under the aegis of the Department of School Education & Literacy, Ministry of Education, Government of India. It covered more than 21 lakh children and 2,70,424 teachers from 74,229 schools drawn from the 781 districts of all the States and UTs of the country. The analysis of the data generated through PARAKH Rashtriya Sarvekshan 2024 provides the average performance of Grades 3, 6 and 9 in different subjects. PARAKH Rashtriya Sarvekshan 2024 reports at the level of Nation, States and Districts were released in 2nd July 2025. The reports can be accessed at **https://dashboard.parakh.ncert.gov.in/en**

PARAKH Rashtriya Sarvekshan results focus on planning of Post PARAKH Rashtriya Sarvekshan Intervention workshops at National, State and District level. The Post PARAKH Rashtriya Sarvekshan Intervention workshops are crucial to facilitate discussion on the findings of PARAKH Rashtriya Sarvekshan, the role of various bodies in planning the interventions and putting them into effect. The Post PARAKH Rashtriya Sarvekshan Intervention workshops are being organized with an aim to develop long-term, mid-term and short-term interventions to improve learning levels across States and UTs of India. An in-depth understanding of the low performing competencies in different subjects across Grades at the different levels i.e. National, State and District need to be facilitated. It is important to understand the concepts and subject. Specific competencies that students on average find difficult to grasp and demonstrate. Relevant pedagogical interventions are to be implemented. Findings relating to background variables also need to be understood and analyzed to plan holistic intervention plans.

Immediate/Short Term

Understanding the District Report Cards and Pedagogical Practices to Support Classroom Transaction Based on Competency.

1. **Training the State Level Master trainers (SLMTs) to:**
    - Communicate the PARAKH Rashtriya Sarvekshan 2024 results as per the District Reports.
    - Assist States/ UTs in understanding PARAKH Rashtriya Sarvekshan 2024 results.

- Demonstrate the exemplar pedagogical interventions developed by PARAKH. Understanding of the suggested pedagogical processes mentioned in the existing document would be strengthened through the demonstrations of these actual transactions.
- Encourage the Master Trainer's (SLMTs) to design other Classroom transactions based on the identified competencies.
- Implement the learning levels, the states are also encouraged to implement the Holistic Progress Cards (HPCs) at different stages.

2. **The SLMTs will further disseminate the understanding of the PARAKH Rashtriya Sarvekshan 2024 District Report at the District level. This will include:**
   - Sharing of findings with District level functionaries such as DIETs, DEOs, teachers, head teachers, parents, SMC members and other stakeholders.
   - Identifying learning gaps and understanding of the same by the teachers and other stakeholders.
   - Facilitation by the teachers (use of alternative instructional strategies to overcome learning gaps with the support of BRC/CRC) and peer support (e.g. Teacher– Teacher & Student – student support).
   - Seeking support from parents or other important members in the family and community.
   - Organisation of awareness programs for community.
   - Training of teachers on evolving learning strategies to achieve learning competencies.
   - The SLMTs to convey to the DLMTs how the HPC at the different stages needs to be integrated in the learning process at the block, cluster and school levels.

Mid Term Interventions:

1. **Development of an Intervention Handbook**
   - PARAKH will consolidate a final version of the intervention handbook. Formation of team of teachers (KRPs) as master trainer in different subjects.

2. **Use of PARAKH Rashtriya Sarvekshan 2024 findings to develop State AWPBs**
   - PARAKH will identify various PARAKH Rashtriya Sarvekshan 2024 based indices which will be associated with other datasets such UDISE. Report associations of the teacher quality index and infrastructure index etc. with student achievement.
   - The above stated associations will help states develop evidence based AWPBs.

3. **Development of an Item Bank (Dynamic)**
   - Items will be developed for all subjects in English and then translated into other regional languages.
   - Items will be piloted and finalized
   - Action plan will get developed on item replenishment

4. **Development of ICT based Learning Resources/ Material**
   - ICT based resources to be developed for classroom transactions of competencies.
   - Existing NCERT's ICT based learning material to also be adapted.

- Exemplary resources to be developed and shared with states for replication in their regional languages and further development in other subject areas.
- Role of ICT based interventions to be linked to PARAKH Rashtriya Sarvekshan 2024 findings to increase outreach.
- Development of supplementary learning resource materials for students and teachers.
- Development of material for Orientation of school leaders.
- Development of e-content on competencies identified as difficult.
- Development of interactive modules on various competencies identified as difficult.

5. **Data Sharing with States/ UTs**
   - PARAKH Rashtriya Sarvekshan 2024 weighted and scaled data will be shared with States/ UTs to help them carry out independent research on variables of interest.

Long Term Interventions:

Curriculum Review and Reform

1. State will develop policy briefs for systemic review and reform
2. State will come out with guidelines/suggested practices for teacher education/training and school curriculum review and reform e.g., review of curriculum of pre service teacher education programme.
   - Review of curriculum of pre-service teacher education programmes.
   - Review of school curriculum in States/UTs
   - Revisiting the curriculum/syllabi and textbooks.
3. Developing a web-based application to address the needs and concerns of teachers and students.

   Creating a discussion forum for teachers and students for improving quality of education e.g., using of educational technology.

   Section on participation/ coverage records the percentage of boys and girls who are tested in the survey; percentage of urban and rural students who are tested in the survey; percentage of different category (SC, ST, OBC and General) students who are tested in the survey; percentage of Children with Special Needs (CWSN) who are tested in the survey; percentage of students studying in government, government aided, private recognised and central government schools who are tested in the PARAKH Rashtriya Sarvekshan 2024 survey.

   The District Report is shared with the different functionaries in the States and UTs for:

- Making the State, District and block/cluster level officials sensitized about the issue of competencies and hence the usefulness of PARAKH Rashtriya Sarvekshan 2024 district reports. This also includes Teachers, DIETs and DRGs
- Involving and making the community members aware of DRC- Parents, SMCs and VECs, elected representatives of local governments- Taking the help of appropriate and easily comprehensible IEC materials, display of the PARAKH Rashtriya Sarvekshan 2024 in schools, clusters and publicity through newspapers, radio and other channels of mass media.
- Placing a Grievance Redressal Mechanisms available to the parents/SMC members within the districts
- Appraisal of the competencies of the teachers linked with competencies of the children

Understanding the performance on PARAKH Rashtriya Sarvekshan 2024

- The National, State and District level Reports of PARAKH Rashtriya Sarvekshan 2024 released in the month of May, 2025.
- Post PARAKH Rashtriya Sarvekshan 2024 intervention Workshop held in the month of July, 2025.
- Regional Post PARAKH Rashtriya Sarvekshan 2024 workshops across the nation to deliberate on and plan for meaningful interventions at the district level in all the States/UTS.

Review & Analysis of PARAKH Rashtriya Sarvekshan 2024 Reports by Groups to identify learning gaps

State Groups to review their respective State level Reports and analyse the learning gaps and areas which need intervention. As a presentation, Groups need to present the **overall insights/gaps at State level (as per template given on next page) and for lowest performing Districts**

Analysis of Key learning gaps and areas for Intervention at the district level

PARAKH RASHTRIYA SARVEKSHAN 2024

Name of the State/UT _____

Name of the District _____

Name of participants from Samagra Shiksha Office _____
