

Manu Kohli

Manu has 17 years of experience developing deep tech solutions in India, the USA, and Europe. He has an engineering MBA and is completing his Ph.D. from IIT-Delhi, focussed on developing AI-based detection and intervention solutions for Autism and other developmental delays. Manu started Cogniable with his wife Swati after returning from the US, based on his own experience of late diagnosis and delayed intervention on his son on Autism. The company Cogniable has concluded two large clinical trials that improve Autism diagnostic and intervention processes with AI-based technologies.
